I have a Yeasu FT-401B with the FET in the AGC circuit missing. I would like
to find out what the Part Number is.
Also a copy of the schematic would be very helpful.
Thanks,
Tison

I've gotten excellent results from one of those trunk-lip mounts. Provides good ground plane and is sturdy enough. I didn't want to scuff up the new Honda with a mag mount and sure as hell wasn't going to use a permanent. Glass mounts are lousy, IMHO, so the only other way to go was the trunk-lip mount. I'm very pleased with it.

100 watts is a lot of power to pull from a lighter socket. Have you ever measured the voltage at the rig with it key-down?

Do you have a 10M beacon in operation? Or do you work
10 meters on a regular basis while using the beacons between
28.300-28.175? If so then your help is needed to maintain
the 10M beacon page on the Lehigh.Edu server.

Bill WJ5O would like to have your help in keeping the
10 Meter Beacon Page as accurate as possible. He is taking
over the job to keep it updated as commitments at home have
left me without the time to do updates in a timely fashion.

If you have your Web page linked to it, there is no need to
change anything as the URL address will remain the same.
The only change will be in the person doing the updates.
Several of you have been a great help in the past. I just
hope that you will continue to give Bill the same assistance.
Bill has two addresses that you can reach him at:

(please take note of the anti-spam device used)

wj5o *at* juno.com or wj5o *at* worldnet.att.net

Bill will be posting his updated version in the very near future. You
will know when it is posted because the info at the top will reflect
his call (WJ5O) sign instead of mine.

You can view the beacon page at:

http://listserv.lehigh.edu/lists/tenten-l/beacons.html
(or you can get the plain ASCII version at:)
ftp://ftp.lehigh.edu/pub/listserv/tenten-l/dx/beacon.list

Nothing cost anything.

I use Nextel in the NYC area , and it sucks ! Garbled transmissions ,
and won't work (Cell Phone & Direct connect) in western NJ or at all
in PA . Most expensive boat anchor I ever purchased !!!

My GMC pickup has three cigarette lighter sockets. I run 100w out of
one of them with no problem. It must be fused for about 20 amps.

Hi,

Yes I have heard K1MAN violate the rules and regulations by ADVERTISING his Associates degree in "basic Electronic" on this so called talk show.

1) I have sent this tape to the FCC and they agree he has infact violated several rules, but they can't be bother with him because hams don't complain about this sort of thing, namely they cry like CB'ers!

2) This so called Asociates degree sale is in DIRECT violation of Maine CIvil law.

3) K1MAN has and still is violating the copyright of Hap Holly, whose mather is only licensed to Vern Jackson on HF. He has also violated my copyright by reading a story I wrote about the Maine ice storm on his stupid show with out my permission.

If the amateur comunity just sits on their lazy butt and allows the stuff to continue, well it won't be long before amateur radio will become another 10-4 junk yard.

I'm sorry but I am sick and tired of the lazy amateurs that don't have the guts to speak out against trash like K1MAN!

Oh by the way, K1MAN was no where to be found when we Mainer's had the ice storm back in Janurary. He was too busy keeping his worthless diatribe on the air... we sure could have used his help at the RED CROSS CENTERS... but maybe we were better off that the idiot stayed away!!! FOI over half of the State of Maine was with out power or heat so where was Baxter and his army organization?

K1MAN, IARN and AARA do not exsist... they are not real... no membership what so ever... just a few unsuspecting SWL's and no code TECH's.

And for the final final the ID that K1MAN has been saying is Walter Cronkite is in fact an imposter!!!! It has been proven via spectograph in a Federal lab....

SO all you K1MAN fools out their, now you know the facts!

Well, gentlemen
I can tell you as a 13 year Army NBC officer that if EMP and TREE is no major deal than we sure have been pissing away billions of dollars over the years to shield our equipment from it.
Part of the warfighting senerios is the simutaneous detonations of 2 or more SLBM'S over mid continent in conjunction with the main strike on the east and west coasts by SLBM'S and then the big hit over the polar route.
We have figured that those high airbursts would take down most of the civilian communications and power even before the EAS can get the word out.

Regards,
AAR5AC / MI

HELLO
NEED HELP OR ANY INFO ON WHAT COULD BE WRONG WITH MY ICOM W21AT. BATTERY
GOOD. POWER SUPPLY GOOD,

ITS JUST DEAD. WON'T POWER UP. HAVEN'T DROPED IT,
HAVEN'T USED IT FOR A FEW MONTHS JUSTED CHARGED
THE BATTERY WITH THE ADAPTER. FOR 24 HOURS.

BUT JUST WON'T POWER UP..??????

THANKS FOR ANY INFO..
PS/WONDER IF THERES SOME COMMON PROBLEM ?

Don't know. I do have an alias through AMSAT which is: mycallsign@AMSAT.ORG
I keep it current with my paid for ISP account. Anyone can do this, just
visit their website to find out how.

More than likely, Yes, a nuclear driven EMP would fry
the CPU's.....and CMOS, JFETs, ect...

The best protection I can think of is to shield your equipment
in a faraday cage..you can inprovise one by, finding an ammunition box made
of metal, the kind the military uses..and line the inside with styrofoam
and place the radio inside (make sure the radio doesn't come in contact
with the sides)

BTW - if a small nuclear weapon were to be detonated at a high altitude
over the center of the U.S...it would be enough to wipe out most electronic
equipment over the North american continent

You can transmit on frequencies allowed by your license class with practically ANYTHING, even if you built it yourself, as long as it conforms to FCCs emission standards. The other way around is not necessarily true. Your informant may have been thinking of the general prohibition against using non-type accepted equipment such as most ham gear on commercial freqs.

CW sure as hell isn't the only thing you need to be a good ham, but it sure helps. For one thing, you think a lot more about each and every word transmitted than you do when you simply key MIC, open mouth, and see what falls out of it.

** NEWS LETTER **
Maine & Living Editor
L. Farris

Re: Article 20 Sept 98: Sunday Edition: "HAM RADIO"

Mr. Farris, (Please excuse if we have miss-spelled your name)

We are writing to you to advise you that the article you did about Amateur Radio and Glen Baxter has many flaws. As far as Amateur Radio, it is a great Hobby, has many benefits toward the public, and is truly a great hobby; you need to be warned about ARS: (Amateur Radio Station) K1MAN, Glen Baxter, and his bogus organization, AARA/IARN in Belgrade Lakes, Maine. This individual has brought this hobby down to its lowest level.

First, Glen Baxter is a nuisance to the Amateur Radio Fraternity. He is known throughout the Ham Community as an alleged Child Molester, and he has a pirated Radio Broadcast on the Ham Bands (under the umbrella that it is an Emergency Communications Organization) when in reality, it is a tool for him to advertise his organization on the WEB to extort funds from new Hams that are not aware of his organization and policies. Glen Baxter has been to Court many times on FCC issues regarding this situation, and seems to get around the issues by using loop- holes in FCC regulations and by-laws. There is a move in the Amateur Radio legislation to get him off the air, for good for the betterment of Ham Radio. Glen Baxter does not represent the majority of Ham Radio Operators, and it is time to shut down this menace to Ham Radio! He has trashed many good volunteer Ham Operators that do not adhered to his way of thinking, and these are individuals that give their time and efforts to support this hobby.

He also has plagiarized Walter Cronkite by using his name to represent his organization and promote his voice on his station ID. Thought he paid for Walter's Voice for a prompt, the Cronkite Organization does not recognize his organization. It has been brought to our attention that Walter Cronkite is suing Glen Baxter for millions for using his (Walter's} picture on the WEB Site to add credibility to his organization. Glen Baxter had tricked Walter Cronkite, and the Cronkite Organization is sick and tired of Glen Baxter, and wants him to stop using Walter's voice for his station voice ID promotion. Call and see!

Enclosed are a few of the past issues of the 'Manchester News Letter' and Warning Flyers. Check it out, call Walter Cronkite and speak with Marline Adler at 212-9753627 (ask about the Law Suite against Glen Baxter). Then contact the ARRL (American Radio Relay League), 225 Main Street, Newington, CT 06111 - 1494 (speak with Dave Sumner, K1ZZ). In addition, we have enclosed a list of 20 Hams throughout the Country you can contact to verify this

information. We could well supply you a list of over 3000 names, but we feel 20 is enough, and I believe after you talk to these individuals, you will see what-is-going-on. Do not be duped by this individual, Glen Baxter, he is a fake, liar, and most destructive element that has happened to Amateur Radio in 50 years! Read the Flyer's by other Hams, we have enclosed!

If you would like too, there is a 'Ham Fest' called the 'Hoses-Traders,' that will be on the weekend of 9/10 October in Rochester, NH located AT THE Fair Grounds. This past spring, Channel 5 in Boston did a segment on Chronicle that was aired 3 Aug 98 about this fine event. Why not send a reporter to check it out, ask some of the Hams about Glen Baxter and his Broadcast. We invited Glen to appear, but he will not show his face to any local 'Ham Fest' in this area because he knows he has trashed many people over the years, and he cannot face the Hams in this area he has so severely talked about. Also, call the FCC in Washington, DC, they will give you the scoop on K1MAN. His so-called Emergency Communications Organization is a bogus front for Government Grants.

It is unfortunate that this hobby has an individual such as Glen Baxter. Your article on Ham Radio was good, and had many facts. It was just the individual you interviewed, that warrants attention. As we had stated, Glen Baxter does not represent the majority of Hams in the United States, and it is time we get rid of this individual for good!

Please contact the Hams on the list we provided, you will see what we are saying is Truth! By the way, the phrase: H.A. M., Helping All Mankind was 'not,' made-up by Glen. The phrase was originally used by a Ham Operator many years ago, and this statement is known through-out the RACES/ARES community. Glen Baxter has a habit of plagiarizing people to make himself look good! Check out his WEB Site, get into Yahoo, type: K1MAN, check it out! Then call Walter Cronkite! Read past Editions enclosed!

Your Paper has been duped by the supreme irritant, Glen Baxter!

So where does that leave all the "latest digital"
equipment? Dead in the water, right along with all the SS
analog stuff, if this is true.
If anything would survive to be usable, it'd be tube type
gear (You'd have to replace all solid state rectifiers and
signal diodes) and whatever SS gear that was inside proper
Faraday shielding.

That's something of a myth. As we've learned more about the nature of NEMP, and ways of dealing with it, the NEMP threat is less than it at first appeared. NEMP isn't very different from lightning EMP. If a 20 MT device were exploded at an altitude of 100 miles, the field strength delivered to the ground would be about equivalent to that delivered by a lightning strike 8 miles away (inverse square law at work). We've all experienced that, and most times our equipment has survived unharmed.

The hazard is to equipment connected to long exposed conductors. While the field strength delivered by NEMP isn't that great at any single point, it is great when accumulated over a long distance. That 8 mile distant lightning strike doesn't seem like much until you consider it is equivalent to a a strike 8 miles distant from *every point* along a conductor on a continental scale. So it presents a severe hazard to the power grid and to the telephone grid because the cummulative effect becomes huge.

We've developed effective ways to deal with NEMP surge, however. The conductors *inside* modern solid state equipment are so short that NEMP surge pickup is essentially nil. We can basically ignore that issue. What we have to worry about is surge conducted to the equipment from external wiring. The same modern gas discharge protectors we use for lightning strike protection also work for NEMP. And many of the same RFI suppression steps we take to meet RFI emission limits also work in the other direction to mitigate the effects of NEMP.

If we engineer our stations to withstand lightning strikes to antennas and mains power, and we can, then we need not be concerned about NEMP. Most broadcast stations today are all solid state, and most of them take lightning strikes in every storm, yet it is rare for them to sustain any damage. That's because they have taken the proper layout and suppression steps to mitigate the effects of the strike. We can do the same thing for our amateur stations. (Many of us *don't*, but that's a separate issue.)

Cross-posted to: aus.electronics,rec.radio.amateur.misc,sci.electronics.components

I am chasing info about a Diamond Systems Flexeprom
I purchased at an auction recently ($2.00 !!!!)

I would be interested if anyone could tell obout this unit

To describe it further :-

It is in a grey box 60mm high, 110 mm Wide and 200mm deep.
A DB25 plug on the side and Mains cord and plug.

There is a lift up lid. On the top of the unit is a 28 pin ZIF Socket
2 leds - 1 marked RX the other marked PGM

Lifting the lid reveals a power supply and main PCB which is coded
PGM01C

Thers is a set of configurator arangements that are pluged into a
blank 16 pin ic socket.

The configurators that are marked 2764, 27128, 27256 and I assume are
pluged into the socket depending on what eprom is being burnt.

Only 4 wires from the PCB attach to the DB25 plug.

If you can help I would be interested in :-

Is it a serial or parallel programmer ?

Can I get data on the unit from somewhere ?

What software is usable ? (theres are a few programs about for
various eprom programmers) EA being one.....can i use
one of these ??

Thankyou

Please reply to paarc@lycosmail.com

According to the ARRL test data in the Navy's NEMP simulator, that's not the case. The real hazard is to radios connected to long exposed unprotected conductors, IE mains power or HF antennas. In the tests, tube type HF rigs sustained damage to the front end coil assemblies. Battery powered VHF solid state radios sustained no damage. HF radios, solid state or tube, protected by suitable NEMP suppression (properly installed) suffered no damage. And no disconnected radio suffered any damage.

The high impedance of tube equipment tends to make it more susceptable to flashovers in the input circuitry. Since that's harder to change than a tube, the advantage of tubes is moot. NEMP protection is available today, and with that properly installed, there is no reason to fear NEMP.

There are several possible sources I can think of for all of the info you want. For ARRL member numbers, the only source is the ARRL, although I do note that apparently in the recent past, the ARRL claimed that it had an all time record number of members. The ARRL probably also has tracked the number of hams per year by class et al.

The Flying Horse folk with the old Callbooks used to publish a yearly figure for amateurs which was also broken down by class. If you can accept their October cutoff date as accurate enough (they did do the same thing year after year), that's a good source. The FCC probably doesn't have any idea of what the amateur population was let's say 15 years ago except by looking at a callbook unless some employee is willing to do a lot of work digging up the information. I thus suggest either the ARRL for both figures (to be honest,
few people question the accuracy of figures they provide) or the Flying Horse folk.

>
>Q.E.D.
>

Jeff, third party traffic isn't illegal though. Neither is putting folks on amateur
radio who call a phone number, and who know that what they say can be
sent out over the air. He's not broadcasting music, an old no no, although
I've been told by oldtimers that at one time, hams could transmit music legally,
and his use of let's say Newsline isn't illegal either. While his habit of keying
up without fully listening is annoying, that's not what most people seem to
get upset about when Baxter fires up. Assuming that he either logs the third
party traffic or keeps it on tape so that it can be reduced to logged form,
he's legal on that particular issue. He's not allowing unlicensed folks to fire
up his transmitters without a control operator, so he can't be burned that way.

OK, you don't like the content, I don't like the content of lots of things I
hear on the air, but unless I hear illegal operation, I keep my mouth shut,
and spin the dial if I'm offended. Now if you want to change the rules, that's
fine, but bulletins are one of the few one way communications allowed, and
Baxter definitely has amateurs tuning in to hear them, as does the ARRL.
I'm not even comparing his group with the ARRL, just noting that both seem
to play by the same set of rules with the content of the ARRL bulletins closely
tied for the most part to amateur radio. Before I worry about K1MAN and his
assistant firing up the transmitters, I'ld rather see some of the jamfests cleaned
up, along with the insults and the like. I also note that Baxter's behavior isn't
all that different than some stations during contests, as I forgot there was a
contest this weekend, and suddenly found my in use frequency preempted by
another ham who either heard me and ignored us, or couldn't hear us and was
guilty of the same actions as Baxter.

You have Reber's antenna confused with Karl Jansky's antenna. NRAO in Greenbank has a reproduction of Jansky's antenna on the lawn near the visitors lodging. They have the ACTUAL (not a reproduction) Grote Reber paraboloid on the opposite side of the main entrance, south of the laboratory building.

The original plan for "Contact" was to use Grote's callsign W9GFZ, the movie producers changed it to W9GFO, probably thought it sounded better. The call actually belongs to a ham in Indiana, who was not consulted prior to its use. Best part about the movie was the blind character, Kent Clark, who is based on a real life astronomer, Dr Kent Cullers. Worst part of "Contact" was that they changed the ending that was in the book. If you saw the movie but didn't read the book, do so right away!

This is found on the websirte where you can download Log-It:

"Your CD-ROM drive must be designated DRIVE D to access the QRZ! cd through
this software. "

I don't know about YOU, but I'd have a serious problem with my other D drive
if I mapped my CD ROM drive to D: Software should _never_ explicitly
require drive mapping to operate. Instead, this should be a user-configurable
option at install time.

For as colossal a programming blunder as this, you get a "D".

But hey, the software is free....

This would work if only he was trying to listen to another station. Since he is one way broadcasting it doesn't matter to him how much power you are running. He just keeps transmitting. Anyway that is why they have VFOs on the radios so that you can QSY. Don't think it is worth the effort to "fight" k1man over the frequency he "was assigned by the FCC" to broadcast to all amateur radio operators.

Put your concerns in a letter to your congressman. Your representative
can not act unless the complaint is writing. If hams all over the country
wrote to congress, we might see the FCC's funding go up. One thing
that would help is to let the FCC keep all fines that it collects. That
would
really bring enforcement up!!

The city of Lafayette has asked its congressman, Ed Pease, to motivate
the FCC to go after some local CBers. So far the FCC has been VERY
active here!

1418. FCC revival of enforcement?

Newsgroup: rec.radio.amateur.misc

Source record: 159455

The FCC has ordered KA2YBP off 40 meters "until further notice".
Further, he was issued Notice of Violation on October 21 for jamming
a 40 meter net on 7,240 KHz by retransmitting the audio from a local
broadcast station. He was also cited for not identifying his station.

Interesting to me is that the violations reportedly happened on Oct
18th, just 3 days prior to the notice.

Is this an indication that the FCC has finally decided to take action
on amateur radio violations? Will some of the 20 and 75 meter toxic waste
sites be targeted also?

And while I said (weeks ago, by the way) I cannot argue that I am "legal", I would like to see how you compare my 1-watt-more-than-is-legal to some idiots on the "freeband" shooting 1kW through dirty, kit-bashed equipment. Who is supposed to be damaged by my 5 watts?
No, I am not advocating illegality. I WILL say, however, that in my station the spirit of the law is at least upheld, if not every little letter of it. I wish I could say that about most of the CBer's and a lot of the hams I hear on the air.
Mike

IMO, wishful thinking. 0.35% of the population is not going to
get Congress to alocate more money to the FCC.

Hi contest folks.

I am German and work for a few years in the US. I like contesting, especially the big ones and prefer CW. I used to work with a few friends in the multi single categories.

I am looking for contacts to contest groups in the Puget Sound area (Seattle, Bellevue).

Please email me.

Andreas

What is all that stuff, Larry? There was a *lot* more of it trailing
your question below.

>Where did the expression newbie come from? I thought we call new
amateurs 'beginners', or in the old days 'novices'.

Actually, in 1922 "novice" referred to those who used the new
radiotelephone appartus to broadcast (possibly because it was felt
that continuously transmitting in a one-way manner on phone didn't
take anywhere near the skill necessary to communicate in a two-way
fashion); it was also used to describe broadcast listeners. In fact,
an editorial in QST declared that "novices are not amateurs, as the
press seems to think." (There was no Novice Class license back then,
so no one now-a-days should take offense; its meaning was quite dif-
ferent then.)

> Larry ve3fxq

The term, which means "newcomer" (who may or may not be expert, as opposed to "novice") is used in many places besides amateur radio. Back in my Navy days in the late 50's the term "nubby newbie" was used to describe a recent transfer onboard (as opposed to a "boot camper" who was new to the Navy, not just to the ship).

SB QST ARL ARLB089
ARLB089 FCC lifts restrictions on use of 7290 and 3935 kHz

At the request of ARRL South Texas Section Manager Ray Taylor,
N5NAV, the FCC has lifted restrictions on the use of 7290 and 3935
kHz. The frequencies had been used for handling health-and-welfare
traffic during the recent flooding in several Texas communities.

The FCC says that a voluntary communications emergency remains in
effect for 7285 and 3873 kHz for the handling of emergency traffic.
The frequencies are to be cleared within 3 kHz on either side. The
FCC's Houston Resident Agent Oliver Long has asked all amateurs to
cooperate by recognizing the communications emergency and
relinquishing the use of 7285 and 3873 kHz between 8 AM and 6 PM
Central Time.

ARRL Bulletin 91 ARLB091
From ARRL Headquarters
Newington CT October 26, 1998
To all radio amateurs

SB QST ARL ARLB091
ARLB091 FCC cracks enforcement whip

The FCC has begun to crack its amateur enforcement whip. A New Jersey ham has been ordered off 40 meters until further FCC notice after allegedly causing interference to the ANARC Net on 7.240 MHz October 18. The FCC also issued an Official Notice of Violation October 21 against James C. Thompson, KA2YBP, of Waretown, New Jersey.

Thompson, 58, was accused by FCC inspectors of illegally retransmitting programs from a Standard Broadcast (AM) station on 40 meters and willfully interfering with the amateur net. The FCC also charged Thompson with failing to properly identify.

It's the Commission's first amateur enforcement action since the FCC announced it would consolidate amateur enforcement within the Compliance and Information Bureau under the coordination of Riley Hollingsworth, K4ZDH, the CIB's legal advisor for enforcement.

Hollingsworth said the FCC acted in the Thompson case on complaints from amateurs, but FCC inspectors did all the legwork. The Notice of Violation says FCC representatives conducted an inspection of Thompson's station on the morning of October 18. ''From approximately 9:39 to 10:00 AM EDT, the licensee of station KA2YBP retransmitted programs from a Standard Broadcast station, broadcasting on 1450 kHz, to Amateur Radio Service frequency 7.240 MHz,'' the Notice said. FCC officials found an AM receiver ''positioned adjacent to the Amateur station's microphone and tuned to 1450 kHz,'' the FCC said.

Hollingsworth said two FCC inspectors caught Thompson red-handed and that he admitted being the culprit. Hollingsworth said FCC personnel used a combination of long-range and local monitoring and tracking to zero in on Thompson's QTH as the source of the interfering signal.

Thompson has 10 days to respond to the notice and provide ''specific action taken to correct the conditions observed above.''

Hollingsworth said he expects to have some additional amateur enforcement cases develop as a result of calls to the Amateur Enforcement Line, 202-418-1184.

QST de W1AW
ARRL Bulletin 90 ARLB090
From ARRL Headquarters
Newington CT October 26, 1998
To all radio amateurs

SB QST ARL ARLB090
ARLB090 ARRL Board reaffirms, modifies its restructuring proposal

In a special meeting October 24, the ARRL Board of Directors unanimously reaffirmed the bulk of its July 1998 Amateur Radio License Restructuring plan with some modifications. Among other things, the Board's July plan would eliminate the Novice and Tech Plus license classes. To provide a logical entry path to HF for Technicians, the Board now has suggested offering CW privileges to Technicians in the current General CW allocations on 80 through 10 meters. Technicians would be permitted up to 200 W PEP.

The Board also agreed to replace the A, B, C, and D license class designations proposed in its July restructuring plan with the names Extra, Advanced, General, and Technician.

''The July plan eliminated the HF door by eliminating the Novice license,'' observed ARRL Executive Vice President David Sumner, K1ZZ. ''This is, in effect, a replacement for the Novice, but without an additional license class.''

Under the July plan--and under the FCC's proposed streamlining--the entry-level HF license would be the General, which under the ARRL plan would require passing two written examinations plus a 5 WPM code test. Board members at the October 24 meeting near St Louis expressed concern that the leap to HF privileges under the July plan could prove too daunting, especially for younger newcomers. Some also were troubled about the growing gulf between the ''traditional'' HF operator and the newer VHF-only amateurs.

Addressing the Morse code requirement in the International Radio Regulations, Sumner summed up the Board's position by saying that the new privileges would amount to self-testing. ''By their very nature, you can't use the privileges until you know the code,'' he said. ''We're not expecting the CW bands to be overrun with people

taking advantage of this, but as any CW operator knows, the best way to become proficient in the code is to use it on the air.''

The special ARRL Board meeting was called to consider the League's comments on the FCC's amateur licensing ''streamlining'' proposals in WT Docket 98-143, released in August. Comments are due on the FCC's rulemaking proposal on December 1. During the daylong session, the Board also proposed that the FCC rules ban multiple-choice Morse code tests and establish that a passing grade for a code test be either 70 per cent correct answers to 10 fill-in-the-blank questions or one minute out of five of solid copy.

The Board affirmed its proposals in RM-9196 to improve the procedures for granting Morse code exam credit on the basis of a physician's certification of a disability. It also affirmed ''its strong desire'' that written exams be modified as necessary ''to demonstrate better the depth of the applicant's current radio technical knowledge and operating skill.''

The Board also supported retention of the topic definitions to be included in written exams, as contained in Section 97.503 of the rules, with some modification to accommodate the new four-class structure. Under the proposed testing regime, the Technician exam would include 35 questions. Technician applicants must now pass both the 35-question Novice examination plus the current 30-question Technician test. Applicants for General would have to pass a 35-question test--up from the current 30 questions to include additional questions on operating practices. The Advanced exam would go from 50 questions to 40 under the proposal, while the Extra exam would go from 40 to 50 questions, including more highly technical subject matter.

The Board also reaffirmed its desire that Advanced class volunteer examiners be permitted to administer General class exams, and it renewed its request in RM-9115 for several rules changes involving RACES stations.

The Board noted that it had ''heard and considered the views of thousands of ARRL members'' on the amateur licensing issues raised in both the ARRL and FCC proposals.

Source record: 159474

I like the TS-870, but it does have a somewhat steeper learning curve than other radios. That's becuase there are a ton of parameters that can be adjusted, and the operation manual doesn't really give you all the info you need. There is an expanded operations manual (it may come with new radios) that goes into the theory and operation of the DSP and that goes a long way in helping, but there are still some menu options that aren't suitably explained, so you'll have to play with them and figure out what they do.

If you take the time to learn how all the settings work and interact (I just discovered that the AGC setting can cause the narrow - 50 Hz CW filter to 'ring'.)

I have QSTs from the 1920s-1949 up for auction on www.ebay.com
You can go to this url for a complete list:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=carl777

Do it soon. The auction for the earlier issues ends 10/28/98 PST (late night -
check above url).
Auction for other issues ends later (10/30/98 or thereabouts).

I haven't auctioned off any of my 1950 or later issues (I have all years to
present). So, if you have something I'm interested in to trade for one or more
complete years, let me know. Cash preferred but I will trade for something with a
liquid value or that has value to me.

I am selling my complete collection of ham radio magazines -- year by year.

I have QST, CQ, Ham Radio, 73. I also have BYTE, Kilobaud, MacWorld, etc.

My QSTs run from the 1920s to present. Currently, all my pre-1950 QSTs are up for auction at ebay.com. Go to this URL for a current list:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=carl777

Do it SOON. Some of the items will be at auction end by 10/.28/98 late PST, others by 10/30/98.

All years QST 1950 to present are not up for auction yet. Let me know what you need. I haven't cataloged the CQ yet but I have from the 40s to ???? (at least the 60s).

I also have a complete collection of 73s, BYTE, Kilobaud.

Email me directly and I'll quote you a price.

Use this email address as I'll be moving around the beginning of Nov. and this address will forward to me:

carl@edit.com

Thanks for your kind consideration and good luck in your magazine hunt.

My Very Best to You,
Carl Galletti

Just sold the pastor of our church a 2 meter radio, before he knew that he was going to go to Africa to be a missionary. Is their any 2 meter activity in Africa, or should I just buy the radio back from him. Also, when he does go to Africa, where can he get information on obtaining on license?

>sent out over the air. He's not broadcasting music, an old no no, although
>I've been told by oldtimers that at one time, hams could transmit music
>legally,

Now that's an interesting topic; from "Fifty Years of ARRL":

"... Then broadcasting came along. Its first noises were made by amateurs,
using their radiotelephone equipment over distances of a few miles.
Victrola records were added shortly after, and some of these stations
had a fair local following. Apparently, serious amateurs ... quickly
left off this work, for later on there were strong attacks by League
staff and members alike about the `radio phone men who have forgotten
the code and continually play their squeaky, squawky jazz records.'
By March 1922, broadcasting by amateurs was `temporarily' prohibited."

An attempted revival in the early 60s: "FCC denied requests of individuals
for the right to play the Star-Spangled Banner twice a day at any amateur
station."

The very first documented broadcast occured Christmas Eve 1906:
"Early that evening, wireless operators on ships within a radius of
several hundred miles sprang to attention as they caught the call `CQ
CQ' in the Morse Code. Was it a ship in distress? They listened eagerly,
and to their amazement, heard a human voice coming from their
instruments - someone speaking! Then a woman's voice rose in song.
I was uncanny! Many of them called to officers to come and listen;
soon the wireless romms were crowded. Next someone was reading a poem.
Then there was a violin solo ... Thus was the first radio broadcast
in history put on." (from Harlow's "Old Wires and New Waves")

From the beginning of time (radio-wise), some amateurs have had the
desire to broadcast; what drives them, one can only speculate: Possibly
they have a fear or inability to carry on a two-way conversation
with another ham.

I retract all this, and - for the time being - apologize. Art Bell has
written a private letter, and the "family threat" scenario is, he states,
very real.

I will take his word for it - and will cease to distribute anything else on
the matter until Art makes a public statement on the matter.

Hi,

my friend just put up a 15' vertical dual band (2m & 70cm) base antenna on the top of my roof. I live on top of a mountain. The good news is that the antenna works good. Maybe too good!?

Not only do I pick up all our local repeaters, I now also pickup the repeaters that's on the same frequency 60 miles, 120+ miles away! When I tried to listen to our local repeaters frequency, I get a lot of traffic and I cannot tell who is on which repeater.

Question: How does one filter out distance repeaters with the same frequency (if some don't have PL output)?

I have this problem with almost all the local repeaters I use?!! I am currently using a Yaesu mobile as a base.

Linda

Unfortunatly, what you are hearing is an organized jamming campaign by a group of malcontents who have taken it upon themselves to jam one of the oldest networks of political discussion on Ham Radio, The Liberty Net.

3.950 has been for close to 30 years, the preemminent frequency for conservative political commentary during it's Saturday night Network. (10:00 PM EST each saturday night) You could think of it as ham radio's answer to C-SPAN and The McLaughlin Group.

Again, and most unfortunatly, a small number of organized and external-to-ham-radio-funded jammers have taken to jamming this place of conservative political discussion, like clockwork and right on cue each saturday night. The FCC cannot act due to funding constraints.

We have, however, put up a web page which describes and IDENTIFIES the jammers and their masters/handlers. You can find the page at the link below. H.C.H. (swl)

Hi Ken,

1) I don't want to have to purchase another antenna... and have to
have someone put it up again.
2) Some distance repeaters are in the same general direction (east)
as the local ones. so, to point in any particular direction with a
beam will not help.

Any other suggestions?

Linda

As I suspected, some of the "offending" machines would probably be in line with the one you want. You have a classic problem. An excellent location and a great antenna ! It wouldn't make any difference if the other machines had PL on the output or not, once your squelch is opened you are going to hear anything that is out there. If you haven't already tried this...you might try reducing your output power and perhaps you won't bring up so many other machines. Other than that I dunno! Anyone else out there have any suggestions??

1462. Help with noise problem.

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-26 00:00:00 UTC
From: Michel Morin <morinm@csdgs.qc.ca>
Message-ID: <_KSY1.216$dB4.16605@carnaval.risq.qc.ca>
Source record: 159528

Hi there
I have a funny noise problem mostly on 80 meters. It sounds like a cyclical burst of static and it is nearly regular. Nothing I do can get rid of it. It is not always there, some nights, the noise level is about S1 on 80 meters. I took some measurements, here they are:

160 meters S3
80 meters S9+20 db
40 meters S7
20 meters S3
10 meters S1 but it is still there.

I have tried 3 different HF rigs and a shortwave receiver and there is no difference. I tried putting my TS-850 on a battery and shutting off the main breaker in the house but it didn't change anything, which means it comes from outside the house. Sometimes, I think it is a kind of corona discharge. It can distort a good ssb signal, even one that is over S9. My noise limiter and dsp can't do anything with it. Some nights, it's not there at all and the noise can get as low as S1. When it is there, it varies in a cyclical but not exactly repetitive fashion from S5 to S9 +20 db. This variation doesn't take more than about one second.

I live in a small town on the south shore of Montreal and it shouldn't be that noisy. If an expert could give me some hints, I would apreciate it a lot because I am really fed up with that situation. When I ask some other hams who are maybe 20 miles from here, they don't have that problem. Any help welcome.

I had the exact same problem with my Icom V21AT after it sat without being turned on or charged for six months. Look in the owner's manual and there is a key sequence of I think four keys that you hold down while sliding on the battery. That will bring your radio back to life. Let us know what happens....

Good Luck,
Steve

Hi all, have run across a complete paging system in a friends shop. I'm wondering if it's worth selling and if anyone would be interested in it. Not sure what he's got in it. anyway, it's a Moto maxar VHF (154.625?) single channel base w/mobile mag. mnt antenna, pwr supply and Desk Mic, Zetron paging terminal w/pwr supply and about 6 BPR2000? pagers. All pagers are numbered and will beep when paged, so it all works. It's a bit dirty, though....
anyone?
thanks,
Randy

BOX 191, FIN 70101 KUOPIO, FINLAND, EUROPE. Order while the supply last. If you order catalog before November 20, 1998, you get special gift. No obligations! IMPORTANT! DON�T SEND MONEY, catalog is free! This offer isn�t valid in Finland, Estonia, Latvia, Lithuania and Russia. Please no email inquiries! If you want more than one catalog, send 5 IRC coupons per catalog.

1481. Hurricane Frequencies for Hurricane Mitch

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-27 00:00:00 UTC
From: snyder@ecom.net
Message-ID: <36363aa3.20703430@news.ecom.net>
Source record: 159349
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

Disaster frequencies:

With extreme Hurricane Mitch bearing down on Mexico and Belize, keep in mind that you can find many hurricane-related radio frequencies at the Hurricane Frequencies web site. Bookmark the page now so you can get to it quickly when you need it.

Hurricane Frequencies is a list of hundreds of selected frequencies below 30 MHz that carry hurricane-related traffic during the hurricane season.

Times and frequencies are subject to frequent change, and are listed for reference only. Updates are published as information becomes available.

The frequency list includes
- Amateur radio emergency and disaster nets (ARES, RACES, etc)
- U.S. federal, state and military agencies
- U.S. Coast Guard weather and nets
- National Hurricane Center, FAA, FEMA
- Commercial weather broadcast stations
- SSB, CW, FEC-SITOR and facsimile modes

Several useful links to current tropical cyclone information are provided. From the site, you can quickly view the NWS/NHC watch/warning and strike probability graphics.

During this severe storm, your updates and corrections will be especially helpful.

You will find the Hurricane Frequencies site at:

Joe,

I've been using X-10 units, 5 of them the original versions and a few of the newer Radio Shack units for about 10 years. I've run between 100w and 1kw with no noticeable problems. Lost 2 of them from lighting spikes (a lot of other things blew with them :-( ) Other than that, they have worked very well. I have not used them with a computer controller.

One thing you could run into is a problem with the house wiring. Most if not all installations these days split the three wire entrance feed so you could find that with the controller plugged into one leg it might not connect with the switch modules on the other leg unless you have a 220v appliance on somewhere to provide a bridge. Sometimes, I've heard, the the transformer feeding your house is close enough to take care of this.

What I've done is to put a 0.1mfd 245vac capacitor across the 220v line at the electric drier outlet with a 15amp fuse on each side. You should use a cap approved by UL for 245VAC service to be safe.

I wrote this up in the QST Tech Notes several years ago, but I can't remember the issue.

You're certainly correct there, twelve. That
OTK character is one of the most illiterate,
nauseatingly disgusting pieces of vermin ever
to invade the amateur bands. The poor slob
can't even READ, for heaven's sake. Have you
ever heard him *try* to read something over the
air? It's almost embarrassing. The stupid fool
comes off as some sort of know-it-all, perhaps
one of the finest examples of narcissistic
behavior on amateur radio, then, when presented
with some form of written copy on which to expound,
is quickly reduced to, "duh... uh... oh... no, wait,
uh... duh....", etc.

sickening. the lousy, stinking porkbutt. ecch.

>HTX-404 Radio Shack 440 HT Radio. We found him in a local parking lot, It's
>still going on now and the Repeater op. Is now thinking of pulling the plug
>on the repeater due to this on-going problem

You found him jamming a repeater from a local parking lot.

1. He still has the HTX-404 ?????????

2. He can still walk without crutches???????

People who jam a repeater could care less what the FCC can and will do to them. Look at the cases where people have been fined and still continue to disregard the law. The only thing they will understand is if you polity explain to them, that If they continue, IT CAN AND WILL BE HAZARDOUS TO THEIR HEALTH!!!!!!!

OR,,,, Ask him if he would like to stop being a asshole and join in on the fun. Offer to help him get his ticket. Then he could be part of the group and not have to sit in parking lots by himself, trying to blow everybody's good times. He may be just reaching out for help......

If that doesn't work BUST HIS KNEE CAPS.............

Check out www.polyphaser.com. They offer a line of NEMP rated surge
protectors. They also have a book which can serve as an introduction to
the problem and how to address it. (This book alone won't qualify you to
properly set up a NEMP protected facility, but it is a good start.)

SB QST ARL ARLB092
ARLB092 Hurricane Watch Net keeping eye on Mitch

Since activating October 24, the Hurricane Watch Net on 14.325 MHz has been tracking Hurricane Mitch--still an extremely dangerous Category 5 storm--as it moves toward landfall either in Belize or in Mexico's Yucatan Peninsula. ''Our operation is proceeding well,'' Hurricane Watch Net Manager Jerry Herman, N3BDW, said Tuesday. He said the net has had very good response from Honduras and Belize. ''We have some stations that we have been working with that are in harms way.''

Herman said the main concern was to ensure that stations--and residents--had sufficient information about storm surges and winds so they can seek shelter. The storm has sustained winds in excess of 155 MPH. Guatemala, to the south, also was bracing for possible storm effects.

Some Hurricane Watch Net participants in the US and Caribbean have had less than a month to recover from the marathon Hurricane Georges operation, but Herman says all the regulars are ''refreshed and ready to go.''

For much of the day, the slow-moving storm's center has remained over water. ''The one exception was Swan Island--of DX fame--where the eye passed directly overhead,'' Herman said. ''We were able to relay the warnings through VE3MCM/HR who, in turn, relayed them to the people on the island via nonamateur SSB radio.''

Herman reports that Balta Sanchez, XE1UNR, has established the Mexican Hurricane Net on 7055 kHZ and has been forwarding reports from the Yucatan to the Hurricane Watch Net via radio and e-mail. ''We also have had good support from a number of Cuban stations who have acted as interpreters from English to Spanish for us,'' Herman added.

''This looks like it will be another prolonged operation.''

During the past weekend, Herman said, the net had good participation from Jamaica, the Caymans, and Cuba. He reports that most operators during the CQ WW SSB contest were very cooperative and made room for the net.

If the repeaters are not in the same direction, mount a directional
antenna with rotor, and pick the repeaters you want to work.

Africa is a big place - your probably talking about a dozen countries.

I made a couple of trips into Lagos, Nigeria a few years ago and was "allowed" to operate while there. There is an outfit there called the Nigerian Amateur Radio Society - they seemed to control everything - the government doesn't seem very interested in dealing with ham radio over there.

Lagos is the most poulated city on the African continent - something like 10 million people live there.... and 2M was pretty quiet though there were two repeaters operating in the area I was visiting.

Have no idea what the rest of Africa is like - and since my trips to Lagos were 5 years ago, its likely things have changed there too.

Lagos is the most populated city on the continent (or at least in sub-saharan Africa) and there was NOT a lot of activity on 2M - though there were a couple of repeaters

"Fast Forward"

1506. REPORT THE 14.313 and 3.950 Criminals! (202)-418-1184

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-27 00:00:00 UTC
From: "Lloyd, N0VFP" <libertynet@mailcity.com>
Message-ID: <715mtk$mng2@odie.mcleod.net>
Source record: 159374
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Report the 3.950 and 14.313 criminals! (202) 418-1184.

We have a unique opportunity to clean up the 80mtr and 20mtr bands.
I don't have to tell you that there are militant jammers
that work hard at violating 97.113 - "Prohibited
Transmissions", which states:

Sec. 97.113 Prohibited transmissions. (a) No amateur
station shall transmit: (4) MUSIC using a phone
emission except as specifically provided elsewhere in
this section; communications intended to facilitate a
criminal act; messages in codes or ciphers intended to
obscure the meaning thereof, except as otherwise
provided herein; OBSCENE or INDECENT words or
language; or FALSE or deceptive messages, signals or
IDENTIFICATION;

There are two paths to bring these criminals to justice.
they are:

Report them directly to the proper authorities at the
FCC. The telephone number to call in your complaint is:

(202) 418-1184

Or if you prefer send a written complaint:

Compliance and Information Bureau
Compliance Division
Attention: Amateur Complaints
1919 M Street, Mail Stop 1500E1, Washington, D.C. 20554

The other avenue is to ask your US House Representative
to have his staff persue these criminals in the court system.
Since all House Representatives are up for re-election in a
week, they will be receptive to your requests. If you don't
know who your US House rep is, you can find him via the
web at:

http://www.house.gov/writerep/

Select your state, enter your zipcode, and you are prompted
to enter a message to -your- US House Rep. He will be
happy to have his staff contact the proper authorities
to answer your complaint.

If you get the complaint in the 'works' before the election
your chances of getting real action are very good. This
is the right thing to do for the good of our hobby, and
amateur radio in general. We are to blame if we let a
few deranged amateur radio operators destroy the traditions
that made 'ham radio' a noble pasttime. The call signs to
report are: K5BLB, WA9KJI, W9ART, and of course, WB2OTK

There are several involved, you know who you are!

The group that is in charge of the Clean up of 14.313 is the B.A.R.F
http://www.angelfire.com/in/w9xn/

The Chief of Enforcement, Mr. James O'brien:
http://www.homestead.com/BARFEnforcer/Enforcer1.html

These pages are maintaned on a regular basis.

The 3950 Clean-up is headed up at this site:
http://pw1.netcom.com/~frg9600/jammers.html

I will post more on these Criminals when time allows....

Hello Bruce:

I have supplied several handhelds to climbers who guide in Nepal. Th etour company has several assigned frequencies in that segment of the band. Plus there are several emergency frequencies monitored by government services there.

>the FCC should bear this in mind when considering the League's comments.

It's not that the League passes itself off as representing the nation's hams but rather the FCC turning to the only national organization we have. At every international radio conference since WWI the Department of State has asked the League to sit as one of the US delegates; that league official advises the US delegation not only on amateur concerns, but is also included in other areas under discussion. It takes quite a bit of clout to be an invited delegation member.

(How many gun owners are members of the NRA? One percent? one-tenth percent? Yet, the NRA is recognized as the voice of the nation's gun owners.)

If you feel that the League is not addressing your concerns, then become a VOCAL member; let your voice be heard loud and frequently.

1512. Re: Selling ham radios for use by non hams

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-27 00:00:00 UTC
From: gdfthr768@aol.com
Message-ID: <19981026234533.24351.00001966@ng43.aol.com>
Source record: 159402

Wow. For people who were somehow smart enough to get ham licenses, you sure don't read too well.
>Your rationalization doesn't even fool you. >Illegal is illegal.
Alright, so you tell me. What would you rather have:
Some guy using one watt more output power on a now non-type-accepted radio but who transmits, when he DOES decide to transmit, in the legal 40 CB channels, or---
Some guy transmitting at 1 kW through a crappy set-up on the "freeband" or even going into 10 mtrs?
If "illegal is illegal", then I suppose having a cell-phone capable scanner (which, BTW, I don't own) is equivalent to rape or murder.

I am absolutely not going to try to "defend" my operating practices. None of you will ever hear me transmitting, which is infrequent anyway, so I don't know why you are bothering to crucify me for my evil digressions.
And know, too, that your shitty attitudes aren't going to stop me from wanting to get my license and get on the air. I know a lot of nice, responsible hams, each of whom are a lot bigger people than any of you tight-noses.
Some of them run the "freeband", too, and even I know that is illegal. Are they now pariah, a plague upon your sacred airwaves?
The world is much bigger than the FCC and the ARRL, and certainly there are more important things in this world to worry about than this radio-hobbyist who uses (God forbid!) 5W out on a Kenwood.
Grow up, kids.
Mike

1513. ATV questions

>get Congress to alocate more money to the FCC.
>--

I have over 30 years experience in politics and am currently an
office holder. Congressmen respond to anyone who calls in,
even more so if the write (postcards are the best way). They
assume that there 10 other people that you represent. That is
how very small groups (like homosexuals) can generate such
large influence.

The congress does not have to "give" the FCC more money.
It only has to allow the FCC to keep all fines that they generate.
The FCC will have strong motivation to enforce the law!!!

I would like to say the FCC is doing it's Job, but I can't as yet! We are still have jamming Problems still on the 146.640, and other Tampa Bay area Repeaters. This has been a problem for over 5 years now! Plus now the 444.775 and 443.900 repeater in Lakeland, FL are now being jammed by a CBer with a HTX-404 Radio Shack 440 HT Radio. We found him in a local parking lot, It's still going on now and the Repeater op. Is now thinking of pulling the plug on the repeater due to this on-going problem, For he too feels that the FCC is doing nothing about the jamming problams... We are going to start lossing Repeater now in the Tampa and Lakeland, Fl Area due to jammers. To learn more about the problem on HF, VHF and UHF - goto the Amateur Radio Jammer Information Center at,

http://members.xoom.com/ke4jcd/bigbird.htm

I have links to other sites as well as Real Audio Sound clips of the Jamming. Please send letters to the FCC and other GROUPS that clam to care about this hobby to help in the FIGHT of Jammers!

From: twelve_volt@my-dejanews.com
Message-ID: <714mk4hfm1@nnrp1.dejanews.com>
Source record: 159415

It's about 1435 UTC on Oct. 27, 1998. I'm listening to 14.313 MHz as I fool around here on usenet. I just heard WB2OTK claim he "tore Kevin Strom a new ass" the last time he was on 3.950 MHz.

That's VERY hard to believe. Kevin Strom is one of the most intelligent men I know. And WB2OTK and his sixth grade education couldn't hold a candle to Kevin!

I challenge WB2OTK to come forward and debate WB4AIO right here....on this newsgroup! But "Porky" won't, because he's not even intelligent enough to form a complete paragraph! His r.r.a.m. posts only consist of ONE sentence. And that usually contains at least one misspelled word.

U.

Whoa,
You are talking about a pretty big continent. Care to be more specific?
The ARRL may be able to provide a contact for initial questions, or,
look up callsigns for that country in the callbook, and ask some questions.

Chances are, if he is "off the beaten path" in a rural area, the 2M radio
will be pretty useless.

Certainly, those people most interested in ham radio join the League.
Those people who do not are obviously not interested enough in ham radio,
and by definition, their opinions are not worthy of consideration.

Message-ID: <199810271426.JAA22697@mail3.uts.ohio-state.edu>
Source record: 159419

What telephones are naturally RFI resistant without the addition of filters? The ARRL interference manual mentions TCE Electronics as a source. Has anyone had experience with these. Are they especially expensive? Are there other phones that are readily available that are RFI resistant?

I am currently using old rotary phones which are naturally RFI resistant but need to have at least one touch tone phone to access business that require it to get thru their systems. A cheap touch tone phone that was given to me has proved to be unusable due to RFI from my 100W HF rig.

Sounds like you may be hearing corona discharge from a power line
transformer and/or insulator. Id suggest you take a hike around the area
with a standard am/fm broadcast receiver and see if you can find it.

Start with AM and as you get closer go to FM band.
I would also suggest you consider purchasing a MFJ-1025 or the 1026 with
built in pre-amp. Ive got noise here and the box really takes it out.

Mr. Hollingsworth is indeed on the track. He is very much interested in hearing from us. He returned my call personally and we had a pleasant discussion. I am now a believer that the FCC is indeed back in the amateur enforcement business. I notice that the amount of jamming has reduced considerably in the last few weeks. But that's ok, they already have the "big boys" targeted. Thank you FCC, its long overdue.

Hopefully they have improved their reliability. Several years ago I had
many units in use around the house. I had a lot of trouble with the light
dimmer modules going out. These are the modules that replaced your conventional
'in the wall' light switch. I believe I replaced four units in the first year.

We also had some trouble with the various modules triggering on and off during
thunderstorms. As I live in north Texas, this problem was just not acceptable
with our numerous storms during 'tornado season'.

Good luck!

PLEASE, just what we need is another TROLL stirring up nothing but inane conversation between two people that the rest of us must be subjected to!!

Tell me, what possible good does starting this thread serve to the Amateur Radio community at large? Why must you instigate a war of words, posts, and flames between two people who already have enough of a forum to vent their related frustrations??!! Let's not give them another arena that the rest of us have to dig through, wasting our time and bandwidth on usless drivel and mindless name-calling and insults!!

WHO CARES what WB2OTK did to Kevin Strom on 3.950?? The people who WOULD care probably already know about it.

Geez... Sorry, I had to vent this time.

Ive been a ham for almost 38 years. It has never occured to me to operate
in the so called "freeband". As a matter of fact I don't ever recall
even listning there. As for "unlocking"....I have another reason for that.
It's called MARS. Course poor or Drew is basically a CBer, so you can
expect that reasoning from him. Take care Jeff...always enjoy your post's.

1542. WTB: Triband HF XCVR $300-350

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-27 00:00:00 UTC
From: k3drq@qsl.net
Message-ID: <7150pklh1@nnrp1.dejanews.com>
Source record: 159432
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I want to buy a used solid-state HF XCVR transmitting at least SSB and CW including at least 10m, 15m, and 20m for $300-350(price includes fedex or ups s&h). Also, I want the price to include a power supply, VFO, or anything else extra required(except balun, coax, and wire for dipole antennae). If the power supply is an external 12v/13.8v power supply not built in with more than 3A Continuous and 4A Surge, I'll throw the power supply above for free. If you can include more HF bands/6m band in the radio for the price given, that would be greatly appreciated.

However, since I am only 14, I would have to ask for either a month free trial before I buy it or my money back/repairs within 2-4 wks.

1543. ARRL BoD says four classes, and 8 HF CW bands for Techs

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-27 00:00:00 UTC
From: K0HB@arrl.org
Message-ID: <714vtkvkm1@nnrp1.dejanews.com>
Source record: 159433

Excerpts from ARRL BoD resolution from meeting last weekend are attached
below.

The full text of the minutes of that meeting are on the web at

http://www.arrl.org/announce/board-9810/

Whereas, culminating a two and one-half year process, at its July 1998 meeting
the ARRL Board of Directors adopted a proposal for the simplification of the
FCC amateur licensing structure prior to the release of FCC proposals on the
subject, and

whereas, the amateur licensing structure is now the subject of an FCC Notice
of Proposed Rule Making in WT Docket 98-143, with a comment deadline of
December 1, and

whereas, Board members have heard and considered the views of thousands of
ARRL members on the issues raised in the ARRL and FCC proposals, be it

resolved, that the Board reaffirms its July 1998 proposal for the
simplification of the FCC amateur licensing structure with the following
modifications:

1. The proposed letter designations for the license classes are replaced
with the names Extra, Advanced, General, and Technician.

2. Privileges of the Technician licensee are proposed to include CW
emission using the international Morse code in the following "General
Class CW" HF band segments, with a transmitter power not exceeding
200 W PEP: 3.525-3.700, 7.025-7.125, 10.100-10.150, 14.025-14.150,
18.068-18.110, 21.025-21.150, 24.890-24.930, and 28.000-28.300 MHz.

3. It is proposed that the FCC rules establish that a passing grade
for any Morse code examination shall be either 70% correct answers to
10 fill-in-the-blank questions, or one minute of solid copy out of
five minutes sent. Multiple choice tests shall no longer be used for
Morse code examinations.

4. The Board affirms its proposals contained in RM-9196 for improvements
in the procedures for the granting of telegraphy examination credit on the
basis of a physician's certification of a disability.

5. The Board affirms its strong desire that the written examinations be
modified as necessary to demonstrate better the depth of the applicant's
current radio technical knowledge and operating skill.

CBRambo wrote:

> And besides, how would this satisfy the ITU requirement for Morse knowledge
> below 30Mhz?

If you are operating on the air using Morse code, it seems pretty evident to me that you have Morse knowledge! That would seem to me to satisfy the ITU requirement. The ultimate test of knowledge of Morse is not some multiple-guess paper test, but the actual on-the-air use of the skill.

Bravo to the BoD for thinking outside the envelope!

Self testing? What a joke. Why not just say that we are going to ignore international law and be done with it. Actually we do now. International law requires a sending test which we ignore.

BTW giving all Tech's all CW HF priviledges is a great idea. Since 95% of the CW ops are age 50 or over, this might help get some young blood *voluntarily* on the mode. Guess I'm just being selfish, I want someone around to talk to in 30 years....

Two companies make and sell "RFI-proof" telephones -- TCE Labs and Pro Distributors. They are modified touch-tone phones, but are "plain old telephones," lacking many of the features people like nowadays. Both companies offer a money-back warranty.

Radio Shack telephones, with more features than the POTS, are also generally RFI-immune. Radio Shack includes a test for RFI susceptibility as part of their vendor qualification.

If you do have interference problems, they can usually be solved with an external filter. Radio Shack now sells telephone interference filters. In some cases, you need to filter the phone line, use a separate filter for the handset and, if necessary, a ferrite common-mode choke on any power leads to the phone device.

The ARRL has a new book, "The ARRL RFI Book," that covers the subject in detail.

I'm delighted to hear about strongent enforcement, and hope it
portends better times for ham radio. However, it would worry me
if the FCC could profit from enforcement actions. There must be
checks and balances on such power.

I remember that in the 1960's, it used to be a fearful thing to fall
in the hands of the FCC. If you received any notice of violation
(I got a few on harmonic emmission), you had to reply in writing
about what happend and what you are doing to correct the problem.
There were also volunteers that sent out notices of things like
out-of -band emmissions and other violations.

1554. New URL for VK Novice, QRP Page

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-27 00:00:00 UTC
From: parkerp@alphalink.com.au
Message-ID: <715aptflj1@nnrp1.dejanews.com>
Source record: 159444

This is to advise that Peter Parker's Home Page, that contains information on QRP (Australian QRP Home Page), homebrewing (Peter Parker's Projects Page) and for the beginner to amateur radio (Novice Notes Online) has changed URL.

The old URL was http://www.pcug.org.au/~parkerp/

The new URL is http://www.alphalink.com.au/~parkerp/index.htm

You can get direct to the QRP page by replacing "index" with qrp, and to Novice Notes Online by replacing "index" with nonline.

This page is one of the most extensive on the web with articles on most aspects of amateur operation. Feel free to add links to it from your own webpage. If you already have a link or bookmark, please change it to the new URL above. My callsign has also changed from VK1PK to VK3YE.

73,

Peter VK3YE

Give it up, Jeffy. Everyone knows that many HAMBOS gravitate towards the freeband when the conditions are good. If not, why do so many of them have HF rigs which have been "unlocked" for 11m operation?

Once again, Oldington doesn't get it. Technicians do not WANT to bother with Morse code. In 1999, NOBODY besides old white men on amateur radio want to bother with Morse code. Sheesh!

And besides, how would this satisfy the ITU requirement for Morse knowledge below 30Mhz? You know, the same one that Oldington always hides behind when asked to help modernize the amateur radio service and do away with the ancient CW requirements?

"Everyone knows"? Let's take a poll - "everyone" who knows this, please
send me an email - I'll tally up the votes.

With the 10, 12, 15, 17, 20, 30, 40, 80, and 160 meter bands available
us, you'd be hard-pressed to find hams desiring to operate illegally
in any out-of-band region.

>If not, why do so many of them have HF rigs which have been "unlocked"
>for 11m operation?

"So many of them"? How many of the 600,000+ ham shacks in the US have
you visited?

Regardless, I can think of one *very* good legal reason to have a 10m
rig which is capable of operating out-of-band: To use it as I.F. to
drive a converter. Using it as a driver, its output power would be
turned down to the mW range so as to not overdrive the converter.

> to enter a valid receive freq... I use to know how to do this, I thought I
> had to add a line to the yaesu.ini file.

With my ft-50, I added teh line to my win.ini file (where my adms software
stores it's settings) AllowAnyFrequency=1. Here's what I have in my win.ini file:

```
[FT-50 Programmer]
DataDir=C:\YAESU\FT-50
AllowAnyFrequency=1
Calibrate=7636
Com=2
TemplateFile=C:\YAESU\FT-50\TEMPLATE.TPL
UseTemplate=1
```

Yes, it's not the ft-51, but hopefully it'll help.
However, even with it switched from a 0 to a 1, I haven;'t noticed any
difference, I still can't program cell, below 76mhz, or 200-299.995 mhz. I'm pretty
sure this didn't do anything. :(I wonder what this setting does, or if there's a
setting to let you truly enter in any frequency.

I don't see how this is possible. When the FCC is on an enforcement mission, I believe a US deputy marshal is also present. This has been the case in every bust that has occurred in this state. The deputy's law enforcement powers are used in case a forced-entry is necessary, and to serve any court-ordered federal documents. Equipment confiscated is logged by both the deputy and FCC agent.

Please don't make claims such as this unless you can back them up with references.

>Hey Gary, with all due respect, where a you getting your
>information from?
> I was going on the information that the USAF has
>documented in studies.

The primary unclassified source is The Effects of Nuclear Weapons.
That gives us event duration and the X-ray (gamma) fluence. A book
on atmospheric physics will then give us the plasma frequency (and
hence mean free path of electrons) as a function of atmospheric density
(height). With those two facts in hand, we can calculate the current
density and plasma wave induced by the event, and the rest is just
ordinary classical electromagnetics.

(There are secondary effects which are exceedingly messy to calculate.
If we were designing a certain type of bomb, they'd be critical, but for
the purposes of determining NEMP at the surface, they can be ignored.)

As a very rough estimate, we can assume that a 20 MT device produces
a forty million ampere pulse at a height of 100 miles, and model it assuming
the electrosphere is a sheet conductance. That gets us in the ballpark for
estimating surface effects. This crude model is far from accurate, but it
gives rough order of magnitude values which are close enough for our
purposes.

As a cross check on effects, I have Destructive Testing Systems' EMP
simulator which allows me to directly measure the effects of EMP on
various pieces of equipment. That correlates with various data points
from the Navy's NEMP whole ship simulator which have appeared in the
open literature, when correction factors are applied for the difference in
risetime of the pulse.

The EMP simulator generates a pulse in conformance with IEEE 8/20
(lightning) while NEMP has a pulse shape corresponding to the NCS
TIB-85-10. Basically, using the IEEE notation, that would be a pulse
of 0.01/1.0 (microseconds rise and duration). And *that* cross checks
with the theoretical pulse calculated as noted in the first paragraph.
The physics hangs together nicely, as it should.

SB QST @ ARL $ARLB094
ARLB094 Mitch stalls off Central America

ZCZC AG94
QST de W1AW
ARRL Bulletin 94 ARLB094
From ARRL Headquarters
Newington CT October 28, 1998
To all radio amateurs

SB QST ARL ARLB094
ARLB094 Mitch stalls off Central America

Hurricane Watch Net Manager Jerry Herman, N3BDW, reports that, because of the extremely dangerous conditions along the coastlines of Honduras and Belize, the Hurricane Watch Net shifted late Tuesday to round-the-clock operation. Herman said the Hurricane Watch Net and the operators of W4EHW at the National Hurricane Center planned to operate through the night on 3950 kHz. The Net resumed operation on 14.325 MHz Wednesday morning, once 20 meters was open into the affected area. The Hurricane Watch Net shares storm tracking reports with the National Hurricane Center in Miami via W4EHW.

Thousands of residents of Honduras have fled for safer ground after Hurricane Mitch stalled just off the northern coast of the Central American country today. At least a dozen people have died as a result of the storm, which reportedly has damaged homes and generated torrential rains.

In neighboring Belize, most residents of Belize City fled inland to escape the storm's wrath.

Other Amateur Radio nets also are active. Herman says that that Balta Sanchez, XE1UNR, has established the Mexican Hurricane Net on 7055 kHz and was forwarding reports from the Yucatan to the Hurricane Watch Net via radio and e-mail. The net also has had good support from Cuban hams who served as interpreters, Herman added.

Octavio Miranda, TI2OHL, in Costa Rica reports a Central America Emergency Net also has been active on 7090 kHz.

A health-and-welfare net was forming on 14.320 MHz with W9KJI as net control.

I, member of NCI will agree with you that the ARRL's actions of 24 Oct 98, are likely to improve the cahnces of sucess for NCI, but to even sugest that the ARRL is truely NoCode as opssoed to just senile and out of touch with ham radio is just plain stupid. The ARRL made either a Stratagic blunder, or made the tactical desiion that something NoCode would make it easier to rebuid Ham radio after NCI's wins (which it seems to think is closely than we of NCI do) or both. NCI wishes it controled the ARRL this would have been much easier for us., but drop this conspricy BS

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z OCTOBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 28 OCTOBER AND FORECAST FOR 29 OCTOBER - 31 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 28 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 28 Oct: 108/58

GOES satellite data for 27 Oct
Daily Proton Fluence >1 MeV: 8.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.40E+08 (moderate)
X-ray background: B2.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Oct 30 Oct 31 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Oct: 110/60

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 28 Oct: Quiet

Estimated Indices 28 Oct : A K
Learmonth 9 3222 2322
Fredericksburg 10
Planetary 8

Observed Indices 27 Oct : A K
Fredericksburg 7
Planetary 6 1110 2223

2B. MAGNETIC FORECAST
Date Ap Conditions
29 Oct 10 Unsettled
30 Oct 8 Unsettled
31 Oct 6 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 36 was issued on 27 October

and is current for interval 28-29 October.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
28 Oct Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
29 Oct Normal Normal-fair Fair
30 Oct Normal Normal Fair
31 Oct Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
28 Oct 68

Observed Australian Regional MUFs:
Darwin: No Data.
Townsville: Near predicted monthly values.
Brisbane, Sydney, Hobart: 10% below predicted monthly
values.
Christchurch: about 5-10% below predicted.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
29 Oct 65 about 15% below predicted monthly values
30 Oct 85 about 5% below predicted monthly values
31 Oct 95 near predicted monthly values
COMMENT: IPS HF Communications Warning 63 was issued on 28 October
and is current for interval 29-30 October.

Don, to adjust the power, you must remove the bottom cover, look for the chrome shield over the RF board X443120-00, use a small screwdriver, and adjust VR-7. I've had mind set for 140 watts out, for over 5 years, without any problems, I believe the pot works backwards, ie cc for more RF output. Take care, Rich WB2OTK

>his "Tubby Time" with toy boats in tow.

To Casey: Are these RC submarines? If so, I'd be interested in learning more about them. I was looking into RC helicopters but they're awfully expensive. Here in Hawaii, an RC submarine with a TV camera attached would provide a great way of exploring some of the underwater caves and sunken ships, without even getting wet.

To CBDumbo: I wear a mask and snorkel every morning at 0545 in my tub, only my tub is filled with lots of pretty-colored tropical fish, and is 1 km in length (my tub is also known as Ala Moana Beach).

73 Casey (and 72.5 to Drew),
Jeff KH2PZ / KH7

P.S. Autumn WX has struck Hawaii - ocean temperature has dropped to a chilly 78 degrees; mid-day temps are in the low 80s, with evenings dropping to the low 70s. Good bye, Summer.

>THEIR HEALTH!!!!!!!

This would actually be more hazardous to your health. Making threats of bodily harm against another is a criminal act in itself. And if you carry through on those threats, look forward to spending some time in the big house for assault and battery for your actions. Then the real fun begins: the victim's attorney will begin civil action against you, resulting in the taking of most everything you own to pay the judgement, court costs, attorney fees, etc.

This is for the record: I have purposefully removed myself from the 3901/14.313 fiasco. I obtained a ham liscense in 1991 for enjoyment ONLY.What started as humourous spitefull exchanges has progressed to the point of criminal acts.If grown men want to risk their liscense by gross acts of stupidity,that is their business. It is time for all intentional interference to stop,period.This whole thing is a global black-eye on ham radio. And I want no part of it. Long time hams W9XN and W4NTI are both trying to stop this mess and I support them 100%. But to N0VFP and all others in this mess,leave my name out of it.Any further reference to myself in this mess will not be tolerated.

Bob
I couldn't agree with you more. It seems that the times that we live in are driven on greed. It seems to me that when we can't trust our president to tell the truth who can we trust. I have heard stories about the FCC taking equipment from CBers and then resaling it to other CBers at the officer's profit. So I think that the FCC stepping up enforcement is good. I think that there should be a police to police the FCC so all is fare.
I also think that the FCC should go after these so called CB radio repairmen that take clippers out of CB radios so they over modulate, make CB radios work out of the 40 channels, and modify amplifiers to operate on the 11 meter band. There are two of them here in my area. (Madison and Jackson Co. GA). These guys support the illeagal activity in 5 counties. The interferance genarated by So called CBers in my neck of the woods wood stop if they wood go after these guys. We have a problem with them coming up on ten meters and causeing interferance with the local net that meets on 28.440 at 1:00 UTC.
One thing that is for sure, the FCC has its work cut out for itself. Plus these guys have got to have some serious intestnal fortatude. I mean to go into some guys house and get this guy in the act. He could of been a real fruit and went off. I think that one thing the FCC should do

is before they go into a Amateur station or CBer's that they should let the state police of the area know what is about to happen, I mean they have the right to do there job, not the local boys. I belive that with the local police there could be a breech of secruity. I know that to be true with on of the local CB radio repair guys and the Madison Co Sheriffs Dept. I know this to be a fact because the said repairman stole a amp from me, I asked for help and they wouldn't touch him. I was new to the area and he was born here.
In the end I hope that this wasn't a one time deal and the FCC keeps up the good work. There is enough of it. Guys running over power, causing QRM, and operating out of the band, Lord knows they will be busy for a long time.

That's a monumentally stupid idea, OM. Look at the corruption and erosion
of property rights which have resulted from that very same system being used
by the DEA and other law enforcement organizations.

Grow up.

About a month ago, I posted a letter from Khalil, K6FCC regarding the removal of his antennas from the roof of his condo. Below is a follow up on the LACFD's actual involvement in that.

Begin included e-mail ---

Date: Thu, 29 Oct 1998 00:27:35 -0800
>From: Khalil Ladjevardi <khalil@primenet.com>
Subject: Anti-ham Stance position by LAFD

You wanted an update on my antennas ? Well, here it comes..

Did your ever see the movie "Fahrenheit 451", where the fire department went around burning books instead of putting out fires? This movie was based sometime in the future and starred the German actor "Oscar Werner".

On October 28, 1998 at 10:20 am (Los Angeles, California time), it was revealed in a court of law (Division 96, Los Angeles Municipal Court , 3000 South Robertson Boulevard, Los Angeles, CA 90034, Presided by Judge Elliot) that the Los Angeles City Fire Department (LAFD) can directly violate the "Process of Law". Sworn testimony provided by Emil Katz, Roxbury Square Homeowner's Association, stated that he was present while Capt. Randall Judd and Fireman Charles R. Palacios (both of LAFD, Station 92, located at 10556 Pico Boulevard, Los Angeles, CA 90064) were having my amateur radio antennas destroyed on Thursday, September 17, 1998.

The LAFD directly lied to me when Capt. Judd stated emphatically in my telephone conversation with him on October 17, 1998 that "LAFD would never perform an act of this sort, We do not destroy private property. We do not destroy antennas !! " Capt. Judd went on to say that the LAFD is a strictly law-abiding entity that would not perform any type of a vigilante action. Yet, this was done in plain view of Emil Katz. I never received any type of notification that gave me any advance notice of what was to come.

In addition to above statements, Chief Wilfred W. Bisson, KF6XX, in a telephone conversation on Monday, September 14, 1998 at 2105 hours PDT,told me " I will talk to Capt. Judd and Fireman Palacios to resolve the ordinance issue; Khalil, don't worry about it." Three days later, without any warnings, my antennas were destroyed.

Inspector Garza (LAFD Legal Department) called me on the telephone on October 2, 1998 to notify me of a meeting that was to be held at the Los Angeles City Attorney's Office in the week of October 9, 1998 to discuss ways to resolve the "amateur radio antennas on the roof" issue. One problem.. No more antennas..

I wrote a letter (certified/return receipt) to Capt. Michael T. Little (LAFD Legal Liaison) , KD6LAF , on October 14, 1998 requesting a letter from the LAFD that will state the facts of LAFD's position concerning what has happened to my antennas. I stated that I need the letter for court. The return receipt was returned signed by Capt. Little. However, I did not receive any response from him about this. Now I know why.

The issue discussed above pertains to Los Angeles Municipal Code (LAMC) 57.12.02 (enacted in 1996, 5 years after my amateur radio antennas were installed on the roof) which in effect prohibits amateur radio operatora from exercising their Federal Privileges as granted by the FCC and the Communications Act of 1934.
This privileges is further bolstered by the Communications Act of 1996, PRB-1, and California Civil Code 1376

The LAFD has decided that it is above the law and that the public interest can be best served by taking an anti-amateur radio position. The ordinance make it virtually impossible to install any types of roof-mounted antennas, specifically wire dipole/ V-dipole antennas which the LAFD considers as guy wires not as antennas.

It appears to me that something very sinister is happening around us. The LAFD states publicly that it supports amateur radio operators thru its ACS (Auxiliary Communications Service). a RACES program cordinated by Chief Bisson, KF6XX, and Capt. Kevin R. Nida, WD6AIS. Privately, the LAFD is working for the elimination of all amateur radio operators.
You may ask what interest groups, specifically, wish that amateur radio operators will go away ? Well, we have the cable companies, Microsoft (with its low-orbiting satellites), and various land-mobile companies who wish to grab more radio spectrum.
It seems that the LAFD appears to be operating in a direct relationship with the above interest groups (Capt. Nida is involved in a company that specializes in commercial radios).

This is not a case of government serving its citizens, it is rather a case of government serving special interests.

In summary, the amateur radio operator does not have a clear position statement from the fire bureaucracy that is supposed to serve the community. We are dealing with a bureaucracy that is making its own laws. We , as amateur radio operators, must intensify the fight for our legal rights and preservation of our federal privileges. These lawful privileges shall not be eroded by an "appointed" "non-thinking" bureaucracy.

If anyone, amateur or non-amateur, feels the need to express an opinion, please send it to: Brian Humphrey, LAFD Public Service Officer. His e-mail is: brian-humphrey@prodigy.net

I am sure that we would all be interested in hearing the Public Service Officer's response to what happened to me as a result of LAFD's unlawful actions.

Sincerely,
Khalil Ladjevardi, K6FCC

Volunteer
ACS (Auxiliary Communications Service)
Batallion 18
Los Angeles City Fire Department

See This is why I say that the FCC shouldn't use local sheriffs depts.
That cop should be suspened for illegal activity. Cops above all should
obey all laws. If that outbander were here in Madison co Ga I would do
my best to have his badge! So I'm sure that this so called policeman
would leak the info to his outband CB buddies that the feds were in
town.

I'm an occasional participant in the NudeNet that was mentioned in
another article. It gathers on 20 Meters at 0000Z every Thursday
on or around 14.265. Participation dropped considerably in recent
years because of poor radio propagation conditions during the low
sunspot numbers.

However now that sunspot activity has been increasing of late,
the the improved radio conditions should also improve the chances for
a revival of the NudeNet. It makes for a great way to have a
mulit-participant voice chat.. what a concept! :)...

There is an Internet mailing list for the NudeNet to help coordinate
things. To subscribe, send email to majordomo@enigma.sss.org with
subscribe nudenet
in the body of the message.

This came off fire-L, i don't recall seeing a copy of it here....

You wanted an update on my antennas ? Well, here it comes..

Did your ever see the movie "Fahrenheit 451", where the fire department went around burning books instead of putting out fires? This movie was based sometime in the future and starred the German actor "Oscar Werner".

On October 28, 1998 at 10:20 am (Los Angeles, California time), it was revealed in a court of law (Division 96, Los Angeles Municipal Court , 3000 South Robertson Boulevard, Los Angeles, CA 90034, Presided by Judge Elliot) that the Los Angeles City Fire Department (LAFD) can directly violate the "Process of Law". Sworn testimony provided by Emil Katz, Roxbury Square Homeowner's Association, stated that he was present while Capt. Randall Judd and Fireman Charles R. Palacios (both of LAFD, Station 92, located at 10556 Pico Boulevard, Los Angeles, CA 90064) were having my amateur radio antennas destroyed on Thursday, September 17, 1998.

The LAFD directly lied to me when Capt. Judd stated emphatically in my telephone conversation with him on October 17, 1998 that "LAFD would never perform an act of this sort, We do not destroy private property. We do not destroy antennas !! " Capt. Judd went on to say that the LAFD is a strictly law-abiding entity that would not perform any type of a vigilante action. Yet, this was done in plain view of Emil Katz. I never received any type of notification that gave me any advance notice of what was to come.

In addition to above statements, Chief Wilfred W. Bisson, KF6XX, in a telephone conversation on Monday, September 14, 1998 at 2105 hours PDT,told me " I will talk to Capt. Judd and Fireman Palacios to resolve the ordinance issue; Khalil, don't worry about it." Three days later, without any warnings, my antennas were destroyed.

Inspector Garza (LAFD Legal Department) called me on the telephone on October 2, 1998 to notify me of a meeting that was to be held at the Los Angeles City Attorney's Office in the week of October 9, 1998 to discuss ways to resolve the "amateur radio antennas on the roof" issue.One problem.. No more antennas..

I wrote a letter (certified/return receipt) to Capt. Michael T. Little (LAFD Legal Liaison) , KD6LAF , on October 14, 1998 requesting a letter from the LAFD that will state the facts of LAFD's position concerning what has happened to my antennas. I stated that I need the letter for court. The return receipt was returned signed by Capt. Little. However, I did not receive any response from him about this. Now I know why.

The issue discussed above pertains to Los Angeles Municipal Code (LAMC) 57.12.02 (enacted in 1996, 5 years after my amateur radio antennas were installed on the roof) which in effect prohibits amateur radio operatora from exercising their Federal Privileges as granted by the FCC and the Communications Act of 1934.
This privileges is further bolstered by the Communications Act of 1996, PRB-1, and California Civil Code 1376

The LAFD has decided that it is above the law and that the public interest can be best served by taking an anti-amateur radio position. The ordinance make it virtually impossible to install any types of roof-mounted antennas, specifically wire dipole/ V-dipole antennas which the LAFD considers as guy wires not as antennas.

It appears to me that something very sinister is happening around us. The LAFD states publicly that it supports amateur radio operators thru its ACS (Auxiliary Communications Service). a RACES program cordinated by Chief Bisson, KF6XX, and Capt. Kevin R. Nida, WD6AIS. Privately, the LAFD is working for the elimination of all amateur radio operators.
You may ask what interest groups, specifically, wish that amateur radio operators will go away ? Well, we have the cable companies, Microsoft (with its low-orbiting satellites), and various land-mobile companies who wish to grab more radio spectrum.
It seems that the LAFD appears to be operating in a direct relationship with the above interest groups (Capt. Nida is involved in a company that specializes in commercial radios).

This is not a case of government serving its citizens, it is rather a case of government serving special interests.

In summary, the amateur radio operator does not have a clear position statement from the fire bureaucracy that is supposed to serve the community. We are dealing with a bureaucracy that is making its own laws. We , as amateur radio operators, must intensify the fight for our legal rights and preservation of our federal privileges. These lawful privileges shall not be eroded by an "appointed" "non-thinking" bureaucracy.

If anyone, amateur or non-amateur, feels the need to express an opinion, please send it to: Brian Humphrey, LAFD Public Service Officer. His e-mail is: brian-humphrey@prodigy.net

I am sure that we would all be interested in hearing the Public Service Officer's response to what happened to me as a result of LAFD's unlawful actions.

Sincerely,
Khalil Ladjevardi, K6FCC
Volunteer
ACS (Auxiliary Communications Service)
Batallion 18
Los Angeles City Fire Department

Dear Friends:

Khalil sadly didn't ask me where concerned persons could share their
feelings.

I don't have any involvement whatsoever in this matter. That is my PERSONAL
e-mail account he offered. I can't imagine why he didn't have the courtesy
to ask <sigh>.

I regretfully do not have the time or ability to read or forward messages
regarding this subject. I simply ask that you to write to the man in charge:

William R. Bamattre
Chief Engineer and General Manager
Los Angeles Fire Department
200 North Main Street, Room 1020
Los Angeles, CA 90012 USA

There is no official e-mail address for Chief Bamattre (or yet, the
Department!)

That's all folks!

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

>Homeowner's Association, stated that he was present while Capt. Randall
>Judd and Fireman Charles R. Palacios (both of LAFD, Station 92, located at
>10556 Pico Boulevard, Los Angeles, CA 90064) were having my amateur radio
>antennas destroyed on Thursday, September 17, 1998.

Khalil (the person writing the above) seems to think that every action
taken by a person employed by the LAFD is the result of official LAFD
policy.

In reality, there are many different possibilities for
what happened:

- the action was in line with official LAFD policy

- the action contravened LAFD policy, but the officers were unaware of
the policy

- the action contravened policy and the officers *were* aware of the
policy

- the LAFD in fact has no policy on the issue

In addition, it depends on whether the officers were on duty or not at
the time the antenna was destroyed.

From the facts presented, we can't tell which is the real situation.
I could be that the two firemen, acting on their own while off-duty,
destroyed private property. Although this is illegal, it is *not*
the same as the LAFD having an official policy to destroy amateur
radio, which seems to be what Khalil concludes. And the appropriate
remedies are very different for some of the possible cases.

Just because you can transmit into a dummy load and not cause any problems
does not mean that your transmitter is clean and not interfering with the
other service. You didn't mention what frequency the other service is on.

To do proper troubleshooting of this problem you need a spectrum analyzer to
look at your transmitted signal and the frequency of the other service radio.

Another way to do this is with a second receiver tuned to the frequency of the
other service. Remember if they run duplex (repeater system), then you need
to listen on both the input and output frequencies. Do this while your
transmitter is hooked to your antenna and transmitting.

You could have a spur in your transmitter that is causing the problem.

Good luck.

David

I doubt the problem is with your Transmitter. This type of interference usually comes from 'leaks' in the cable system. I think the 2meter ham band corresponds to cable chanell 41, or maybe 42. (Youll notice these are usally dedicated to CSPAN, so the interference won't go over somthing people actually watch.) The 'leak' in the pipe is reciprocal, and you can actually hunt it down by monitoring the band for the TV audio. hope this helps.

Unless the original poster cannot put together a complete sentence he didn't say he was causing interference to the cable system but to the cable system's two way radio, both their base and in the mobiles. How does the cable extend to the mobiles?

I agree if he stated that he was getting into the cable system there could be a leak in the cable, or that they are getting interference on 18A or 18B, but he did not state that. Still looks like an issue with his transmitter.

Read his message again.

If they are complaining about your getting into THEIR cable and should it
be channel 18 in particular, have them come and look for an open tap
somewhere near your station. Channel 18 is well within the 2 meter band
and chances are you are getting into THEIR closed system. It is their
responsibility to find the problem, not yours

The best part comes when you ask him a question regarding something he's posted, he runs for the hills.
Just like Jeff asked him to name a dozen hams who are also active freebanders, don't hold your breath for an answer,
Drew's not capable.

I am looking to add to / replace my old TS440SAT. I am trying to find
out which HF (not HF / VHF) transceiver has DSP on tx as well as rx as
I want to be able to optimise my bandwidth on tx to match my mode. My
requirements are:
WARC transmit coverage
Full HF receive to arounf 50 kHz
Tuning in 10 Hz ore less steps, ideally 1 Hz
Best possible dynamic range
Modes to include FSK /RTTY
DSP on rx and tx which does not suffer from 'overload' effects.
100W + out
VERY comprehensive external control via a PC including DSP settings,
pass band tuning, agc speed etc.
Internal ATU is less important but if present should also be capable
of use on receive.
I'm told the latest Kenwood rigs will fit the bill but there may be
alternatives. The computer control capabilities and dsp on transmit
do not seem to be featured in most advertising from Yaesu/Icom/others.
I know this will hit my bank balance but I want something to last as
long as the TS440 has.

Don't know about the IC-22E but the IC-22S' PLL will not lock over
that range.

I believe a Yaesu FT-1000 MP would meet your requirements.

Got my UTC proceedings today and seems like FCC already has the 421-430
Mhz spectrum plan (spacing and all) handed down. Is this just a think
piece or did we lose this 9 Mhz slice of our 450 band to Refarming?
Maybe I've just been in a coma of late and missed the whole process.
Any ideas or am I just confused?
Tnx for the read es 73

1641. IN MEMORIAM - W7WJM

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-29 00:00:00 UTC
From: bb840@scn.org
Message-ID: <F1LoEx.M9w@scn.org>
Source record: 159279

IN MEMORIAM - W7WJM

It is with great pleasure that I make the following announcement: The FCC has granted my request for the call W7WJM. This call used to belong to Bob Anderson, Renton, Washington, who became a silent key about four years ago. I lived next door to Bob for about 5 years when I first moved to Washington over 25 years ago. When I expressed my longtime interest in amateur radio, Bob took the time to teach me the code, loaned me study materials, and took me across town to a meet a general class ham who administered the novice test. Bob had a conditional class license at the time and could not administer the test himself.

After I received my license (WN7AHD), Bob helped me set up my first station. He helped me find a used DX-40 and VF-1 in good condition, and he loaned me his Drake 2-B receiver and an antenna relay. Later on, I passed the general and advanced class examinations at the FCC in Seattle and became WB7AHD. Unknown to me at the time, Bob upgraded his conditional license to general, and then to advanced as a result of me obtaining my license.

After I received my general class license, Bob loaned me his HW-12A and allowed me to run part of my 80 meter dipole into his backyard. Our shacks were about 10 feet apart, which meant that if we were on the same band, we had to be on the same frequency (his Swan 500C put out so much power that it would cover the whole band at that short distance). Bob was very active on 75 meters and checked into the Columbia Basin Net almost every night. Bob also helped me select my current station equipment (Kenwood TS-520S). While still living next door to Bob, my family and I accompanied Bob and his family to several hamfests. We also accompanied Bob and his family to the Columbia Basin Net Picnic two or three times.

Bob and I kept in touch after I moved to Black Diamond in 1978, often making the rounds to the several amateur radio outlets in Seattle and to nearby hamfests. When Bob became a silent key about four years ago, I attended his funeral and saw the family and many of his old friends.

A few months ago when I renewed my license, I decided to give up my present call (KD7MK) and apply for W7WJM. I contacted Arliene (Bob's XYL) about applying for his call. She was very pleased and said that Bob would really like that. Arliene gave me a copy of the death certificate, so I could obtain Bob's old call without have to wait for it to drop out of the FCC's data base next May. I sent the death certificate to the FCC in the middle of September, then I applied for Bob's call about two weeks later when it dropped out of the FCC's data base. I've been checking the data base at www.qrz.com every day since then, and today my name showed

up with my new call.

RU>Im wondering what mars/cap is and what exactly its used for and if a person
RU>needs a permit how does he get it?
==========
If I recall correctly -

Mars and CAP are two different services not covered by part 97 of cfr 47
Both are administered by the military services and not under the control
of the FCC. MILITARY frequncies are allocated for their use by the congress
and administered by the Military organizations rather than the alloxtion of
freqs for commerial (and personel) use. The Commerce dept and their
administrative agent, the FCC has cog over the amateur service, and other
personel and commercial servies...

MARS= MILTARY AFFILATE RADIO SERVICE
As implied by the name; is a desingated service under which persons
with a valid amateur radio operators liscence MAY be acepted by one of
the reginal or national MARS nets for afiliation with such net with
the purpose of training the participants in handling record message
trafic (as in mesage loged, recorded at the origan, rela, and destination
and assigned message tracking numbers, precedance designations, etc.
Phone patch support of troop moral is also part of normal support.
All mesages handled will be procesed in accord with proven military
communications standards, The training will prepare those participant
to assume active participant roles in disaster or desigmated national
emergency. Mars freqs are assigned adjacent the amaterur freqs
to facilate mod'ing amateur equipment for legal out of band operation
while participating in formal nets; or informal test activity during
designated periods. All freqs assigned by the freq coordinators are
potentialy reused from region to region, It is possible for different
regions nets to have assigned use of a frequncy for only parts of a day.
To join, contact the MARS office on a nearby base for info, and help..
To be accepted, you must have equipment compliant with their standards
for frequency setability, stability and op-modes; and you must commit
to some minimal participation in the nets as called for by the net
coordinators. I belive the three bigger services aare designated
as part of the MARS system) ie ARMY, NAVY, AND AIR FORCE) covering

the Marine Corps. The Coast Guard is dual hated under both a civil
role under Commerce and a Military role in suport of Navy ops and they
have freqs which they share with civil users of the maritime facilites
they support.

CAP = Civi Air Pstrol
As implied, is part of the Civil Air Patrol alloted spectrum, and is not
related to amateur liscence. Some of the frerqs are close to the Amateur
frequency allocations. Some are a long way from any ham freq adjacent to
the aviatione service freqs.. The service is intended to provide the CAP
with communications and liason freqs in support of the organizations SAR
(Search and Rescue) operations and does not requirer an amateur liscence. P
Operation requires that the participants be members of a CAP squadron
and coordination or use of the frequencies is handled by the squadron radio
officer.

MARS is for those wishing to aid the military services in distribution and
desimnation of non-millatray (Health and Welfare etc communications which
are intended to aid the military in increasing personel support. Precedance
desingaters etc are embeded in the procedures that members are trained to
follow and in theory, members could be drafted into active duty in a
role for which they would be trained at the time of induction. It is a
service for "trafic handlers"

CAP is for those interested in supporting Aviation Ops for the CAP and
does not involve message forwording and relay.

. OLX 2.1 . People that live in code blocks shouldn't throw clones

I must agree with N5PVL. Our Constitutional guarantees of God given rights have been trampled enough by greedy government agencies out to fill the till, including many Federal, State and local law enforcement entities. Many of the victims are innocent yet their property has been confiscated BEFORE a trial (guilty until proven innocent?!). FCC keeping the dough from enforcement sounds good until you THINK it through thoroughly. As an ex police veteran, I took an oath to the Constitution and am sick of seeing our property rights (and many others, like the right to keep and bear arms) violated. Go for it FCC on getting these jerks off the air...BUT...be darn sure you have the proof. I'm not against enforcement (go ahead, make my day!)...but I am against corruption. Just think what would happen if individual police officers received a financial commission everytime they made an arrest????!!!!!! (I know I'D be scared!) There is no difference in the outcome when it's an entity receiving the commission!!.....and to comment on another post, I agree that our radio spectrum and ham radio IS under attack by "organizations" (which shall remain un-named :-)), big business, and corrupt government officials. Stop wasting money on dues...oops....I mean, aaah... booze, hee hee...and spend it on stamps for your congressmen and better radio equipment!
Ok, you can flame me now.....

temporarily@dimensional.com (Bill, KD0HG) writes:

>>What of the views of the majority of hams *not* ARRL members?
>Not considered.

True. Non-member views are not necessarily represented.

>Why should they be? The ARRL is a member organization. Its responsibility
>is to represent the views of its membership first and foremost.
>I hate to rain on your parade, their proposal fails even doing that.

True. They probably should voice the views of their members. The
problem is that they are represented by some as the voice of hams not
the voice of ARRL members.

I used to be an ARRL member and for reasons which I do not care to get
into in this forum, I am no longer a member. I simply ceased to
believe that they represented MY best interests.

>Certainly, those people most interested in ham radio join the League.
>Those people who do not are obviously not interested enough in ham radio,

Unfortunately, not necessarily true. I am VERY interested in ham radio.
I am NOT, however, interested in the ARRL as my advocate.

Well Jeff
I'm glad to see that somebody is reading my posts and answering them.
However you are wrong when you said that two officals are always
presant. This is not always the case. In 1991 A FCC offical did inspect
my station and he was alone. Also I said that I heard stories I did say
that this problem exsited. However there was a investigation of a FCC
offical at the Powder Springs GA. feild office for this type of activity
in fact one offical was transfered out of Powder Springs for reporting
such behaivor. I had a big write up about it on my web site last year.
As far as having proof at this time I don't have any proof so that is
why I say I heard stories . The stories that I have heard came from the
person that was transfered. I have to remind you that absolute power
currupts absolutly.
I glad to see that the FCC is finally going to do something about all
the Jamming. I have noticed that Jamming seems to be slowing down. But
the week end is coming and the drunks are out there.
I wonder if one could get a OUI Operating Under the Influence.

Hello!!!
If anyone knows what is the frequency you can talk to the Space Shuttle in 2-meters, please let me know. I know that the SAREX is on board the Space Shuttle..

Thanks in advanced

Miguel, Kf4bos

I'm looking for info or diagrams on connecting two radios as a repeater.
I must warn you that the question has been asked by me a couple times, and
everyone answers the same. ie." look is this manual" or "you need these
parts"

I"M looking for a explanation on how to wire two radios together, as is ,
to make a repeater. And what is a COR??? do i need one????
Does any one have the plans for a simple design i could build.
Thank you

pooky@nospam-toexpress.com

>Why would you need an out-of-band rig to run a converter???
>Every VHF/UHF converter I've ever seen has a normal ham-band input -

Which HF amateur band is 4 MHz wide? If you're using a transverter
to 6m or 2m, you need a tunable IF that covers 4 MHz at HF to cover
either band. You might not want to cover the FM portions, so you might
get by with a lesser span. But then you might want to cover the FM
portions since some HF rigs will do FM, and then you need to be able
to do a 4 MHz span.

A transverter going to 70 cm requires an even larger span. You'll want
to be able to cover from at least 432 MHz to 439 MHz so you can cover
both the weak signal and satellite subbands. That requires a 7 MHz tuning
span for the IF, unless you add multiple conversion oscillators to the
transverter. There's merit to that approach, but there are reasons why
a broad banded approach might be preferred.

The fact is that all of the VHF/UHF bands are wider than any HF band,
so if you want to cover them with a transverter setup, you need to modify
your HF rig for out of band coverage.

This topic seems to come up from time to time in Canada umong some of the amateurs I know - especially with the internet as a means of communications supposedly replacing ham radio. Most amateurs I know see the intenet as a means of enhancing our hobby. The hobby has changed and added new features with the internet and satelites - I believe it is a hobby which makes available a variety of challenges and benefits to people of all ages. It is not dying - it is changing as it has over the decades.

> I"M looking for a explanation on how to wire two radios together, as is ,
>to make a repeater. And what is a COR??? do i need one????
> Does any one have the plans for a simple design i could build.
> Thank you

COR stands for carrier operated relay. What it means is that a signal
is generated by the receiver to indicate that the squelch has been
opened by a carrier, and that this signal is then used to drive a relay
to operate the PTT of the repeater transmitter. In modern controllers,
a solid state switch may be used instead of an actual mechanical
relay, but the effect is the same, when a carrier is detected by the
receiver, the transmitter's PTT is activated.

You can usually find a signal that changes in the receiver when
the squelch opens. In some receivers this drives a "busy" LED
or lamp. In some receivers it is even brought out to an accessory
connector for use with some external equipment such as a TNC.
In modern equipment, this signal is usually an open collector to
ground connection. In other words, when the squelch is closed
it is an open circuit, but when the squelch is open it is a near
short to ground. It probably won't be able to sink more than about
10 ma, so you'll want to drive a transistor switch with it rather
than trying to drive a relay directly (you could use a sensitive
relay directly I suppose). Driving an optoisolater is the cleanest
way to use this signal. That becomes your COR.

In addition to COR, you need to supply receiver audio to the
repeater transmitter, of course. Some radios supply audio at
a fixed level to an accessory connector. For others you can
simply tap the high side of the volume control for audio. This
then needs to be attenuated to microphone level and supplied
to the transmitter.

That's all you need for a quick and dirty repeater. But if you'd
like a *legal* repeater, you need to add a few other things.
You need an IDer, timeout timers, and a way to exercise
positive control of the repeater that doesn't use the main
receiver. A repeater controller incorporates these features
(plus zillions of other accessory functions in many cases).

When using a controller, COR is fed to the controller rather than directly to the transmitter. Receiver audio is also fed to the controller rather than directly to the transmitter. The controller then controls the transmitter PTT and feeds it audio or IDer tones as required.

Most repeaters will also incorporate a duplexer which allows the repeater receiver to operate while the transmitter is on, and allows use of a single antenna. An expedient repeater can use two separate antennas, but will likely still need some sort of filtering to keep the strong transmit signal from desensing the receiver.

1667. Interesting propagation

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-29 00:00:00 UTC
From: Roy Lewallen <w7el@teleport.com>
Message-ID: <3637FB74.25C8BBE4@teleport.com>
Source record: 159338
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I just saw a great illustration of a propagation effect which you might find interesting.

At 8 p.m. this evening I contacted my friend in Pleasanton, CA, just northeast of San Jose, on 40 meters. (It's about 500 air miles from here.) His signal was very strong. Within the couple of minutes it took for us to QSY from CW to SSB, his signal had dropped about 12 dB. (I've measured my S-meter so can convert the readings to dB. The 12 dB is the difference between S-5 and S-9 on my rig's meter.) 15 minutes later, I could just barely hear him but couldn't copy -- his signal was more than 20 dB lower than when we first contacted.

As I signed off, I got a call from another station in California asking for a signal report. He was a good S-9 and I told him so. I found out that he was located just 70-80 miles south of my friend, and that he was using a similar antenna and the same power. I mentioned that the skip was lengthening, and that I bet our signals would drop out within 15 minutes or so. As it turned out, it took just six minutes to go from S-9 to the noise level (about a 20 dB drop).

I've often observed that signals get really loud just before they drop out as the skip lengthens. But this was a great illustration, and I was surprised at how sharp the boundary was. It's not often that I see a propagation effect so clearly illustrated.

A friend who is a out of bander CBer and is also a local deputy
sheriff told me that the US Marshall's often has a local county
deputy made a part time US Marshall so that they can serve
Federal papers. They get pro-rated pay. I guess then that the
FCC might use these individuals to serve complaints.

It works. You are not going to get enforce of laws at the
Federal level without there being money in it for them.
The same is true for local department. Throw money at
a problem and the cops follow.

It is not like we asking them to take the house and car
as well. Just that they be able to retain the fines that they
already generate NOW.

It gives them an incentive to enforce the laws!

Hi Art - I'm the last person in the world that would operate in a
bootleg fashion. But I was considering building a frequency doubler to
try 6m CW since Sporadic E propagation favors the tropics. To accomplish
that I would need a 25 MHz signal as a driver.

I suppose a doubler would be considered an odd way to go about it.
I have a 25 MHz xtal - I could build an xtal oscillator and a mixer,
but would still need a 25 MHz output from the "opened" 10m xcvr to
mix with the 25 MHz xtal oscillator to get 50 MHz output. (The IF one
needs depends upon the collection of xtals one has in the junk box.)

If you send me a 22 MHz xtal, Art, I'll be able to use the 10m rig
on 28 MHz, and only then will your comments be correct (of course,
my 6m coverage will be limited to 50-51.7 MHz, but for CW that's
more than enough).

73, Jeff KH2PZ / KH6

AAR5AC is absolutely correct. Nothing personal but the long and seemingly informed letters stating that EMP is "no big deal" are totally FALSE. I'll put it this way: Put all of your radio equipment in a steel gun safe and let the nukes fly. Guess how much will work when it's over?? Zero, Nada, ----- .-.-.-
.oh yes, a little ground burial job won't work either...and neither will an aluminum foil lined garage...and neither will unplugging it..but hey, if this happens, whether or not your radio works will not be your primary concern when the fallout starts raining down on your head and you have no water, no food, you become a refugee (provided you survive that long)...well, you get the idea.
Ok , you can flame me now..but don't waste my email time, do it here.
And yes I DO know he is right.

The RSCM Wire has now become The W8MMQ Wire!!
Online at http://qsl.net/w8mmq/news.html.
If you want to signup on the email list, just contact w8mmq@juno.com. The newsletter is distributed each Monday.

November 2, 1998
Target: w8mmq@voyager.net

Welcome to The W8MMQ Wire, for November 2, 1998! This newsletter is now presented in expanded form, bringing you the latest amateur radio news, information and links each Monday! You are free to distribute this newsletter to others, so long as credit is given to W8MMQ in some way. Thank you.

If you have any comments or questions, please direct them to w8mmq@juno.com. Also, if you would like to contribute to this newsletter, just email me, Dan/W8MMQ. I will review all information submitted to me, and consider it for the next issue of The Wire.

In this issue: John Glenn returns to space; SEDSAT satellite launch success; Phase 3D continues to be tested; SAREX delayed on the ISS; a Florida ham desputes FCC charges; and much, much more!

JOHN GLENN RETURNS TO SPACE
It was a perfect launch on Thursday, October 29, as 77 year old John Glenn returned to space. The space shuttle Discovery was launched shortly after 2:00 PM eastern time.

The shuttle will remain in space for nine days, during which time Glenn will undergo a series of tests, among other things, to determine the affects of space travel on the elderly.

Millions of people, both young and old, tuned in to Thursday's launch. It has been nearly 40 years since Glenn was last in space. For more information, visit CNN.COM's web site at http://www.cnn.com/TECH/space/9810/29/glenn.liftoff.03/index.html.

SEDSAT SATELLITE LAUNCH SUCCESS
A new amateur radio satellite was launched as a secondary payload along with NASA's Deep Space 1 probe on a Delta 2 rocket from the Kennedy Space Center at 12:08:00.502 UTC on Saturday 1998-Oct-24. Chris Lewicki, KC7NYV, SEDSAT Program Manager, reported that the SEDSAT-1 ground station crew at the University of Arizona in Tucson had a number of problems during the satellite's first pass over the ground station, but the satellite team in Florida had audio confirmation of telemetry sometime later in the duration of their pass.

On the second orbit, the team in Tucson was able to verify the audio of the SEDSAT heartbeat, but weren't able to decode the digital telemetry other than the packets similar to the following (the first packet received anddecoded)

SEDSAT-1*>TIME-1:
Uptime is 000/01:48:01

By this time, the team in Florida no longer had radio access and Chris Bond suggested a mode change to KISS on the TNC, and on the third pass the team successfully received the full heartbeat and decoded it to reveal that the satellite was operating at a nominal main voltage, reasonable temperatures, sucessfull bootups of various processes, but slightly more power drained than expected.

The satellite contains both Mode A and a Mode L linear communication transponders in addition to earth imaging equipment. The approximate frequencies for each transponder as reported in the past by Dr. Mark Maier are as follows:

Mode-L
Uplink 1268.175 to 1268.250 MHz
Downlink 437.850 to 438.000 MHz
FSK, 9600 baud

Mode-A
Uplink 145.915 to 145.975 MHz
Downlink 29.350 to 29.420 MHz

An internet web page describing SEDSAT-1 may be accessed at the following URL: http://www.seds.org/sedsat. (Portions taken from SpaceNews, October 26, 1998).

PHASE 3D CONTINUES TO BE TESTED
It seems like the launch of the Phase 3D satellite will never come. Over the last couple of years, several major setbacks have prevented the satellite from being launched. However, AMSAT has high hopes that the launch will occur sometime soon, maybe early next year.

Currently, there are continuing tests performed on the satellite, to ensure that it will function normally while in space. On October 21, thermal testing began on Phase 3D, to determine how the extreme temperatures and vacuum of space will affect it. After the first of the year, vibration tests will be conducted on the satellite, to see if it is able to survive launch.

For more information on the Phase 3D project, including any special announcements and bulletins, visit AMSAT's web page at http://www.amsat.org/. Also, check out the Phase 3D Integration Laboratory, at http://www.magicnet.net/~phase3d/.

SAREX DELAYED ON THE ISS
Delays in the start of construction for the International Space Station will postpone the permanent presence of ham radio in space. Rick Lindquist,

N1RL, of the ARRL Audio News has more:

International Space Station construction delays in Russia will postpone the permanent presence of ham radio in space.

After meeting with a NASA delegation the Russian Space Agency has rescheduled the launch of the first crew to early next year.

Originally set for launch next summer, the first crew now will go into space in January 2000.

The first crew will consist of U.S. astronaut William M. Shepherd, and Russian cosmonauts Yuri
Gidzenko and Sergei Krikalev, U5MIR. Shepherd is studying for his ham ticket.

The change in launch date was blamed on budget based delays in Russia's completion of the
Functional Cargo Block or service module for the ISS. Launch of the service module now is set for next July. The service module is the section of the ISS in which astronauts and cosmonauts will live during construction and will be ham radio's first beach head in space.

Amateur Radio has been manifested aboard the ISS as "necessary" crew equipment.

Once aboard the ISS, ham radio, through the SAREX program, will serve as an educational tool through worldwide school contacts and as an outreach to the general public.

I'm Rick Lindquist, N1RL

Originally set for launch next summer, the first crew now will not go into space until January 2000.
As a result, there will be no Amateur Radio signal on the air from the International Space Station
until then. The complete ARRL Audio News is at: http://www.arrl.org/.
(Taken from Amateur Radio Newsline, October 23, 1998).

FLORIDA HAM DISPUTES FCC CHARGES
The Federal Communications Commission recently fined Florida amateur Jeffrey Guss, KF4MWT, $2500 for allegedly "jamming" a local business repeater. He is also accused of jamming a local amateur repeater, the was used by a volunteer police force. Now Guss has a lawyer, and is disputing the charges.

John McVeigh is Guss' lawyer, and he is suggesting that "some third party has created circumstances which would lead the FCC to think that Mr Guss is their man." In other words, he is suggesting that Guss has been "framed" in this case.

However, the Commission, area amateurs, and area law enforcement officials think otherwise. They have tracked transmissions to Guss' home, as well as to a pickup truck that Guss was riding in during an instance when the

interference was occurring. They are certain that Guss is their man.

It is not yet known what actions McVeigh will take on the part of Guss. Meanwhile, he does not like the way the press is covering this story. There will be more on this story in The W8MMQ Wire as it becomes available.

UPCOMING CONTESTS
For complete upcoming contest information, visit the ARRL Contest Calendar, at http://www.arrl.org/contests/.

The ARRL November Sweepstakes, CW
November 7 through 9
http://www.arrl.org/contests/announcements/98/rules-novss.html

Japan International DX Contest
The contest is sponsored by Five Nine magazine, and runs from 2300-Z on November 7 through 2300-Z on November 9. Work JAs only on 80, 40, 20, 15, and 10 meters. For more information, visit http://jzap.com/je1cka/jidx/.

AND ... IN CLOSING
Thank you for reading this issue of The W8MMQ Wire! Again, please feel free to pass this newsletter along to others! But be sure to give credit to W8MMQ in some way. Thank you.

Information for portions of this newsletter was taken from the following sources: Amateur Radio Newsline, The ARRL Letter, and the SpaceNews newsletter.

For more amateur radio news, information, and links, be sure to visit the W8MMQ amateur radio web site at http://www.qsl.net/w8mmq/.

This is sad that ham radio has come down to this, But many former CBer's have came into ham radio and are now doing the same things thay did on CB! Not all are bad, but most! For the HF bands are soon going to be over-run by them, For as soon as the FCC and ARRL lower the code speeds before fixing the problems in the LAWS, so to ensure that poor and bad people will be delt with in a timely manner with a fine and/or re-moved from the bands! We in the US seem to be the only county with this problem, For I have yet to hear a non-US station out just to jam and/or start a fights on the bands.....

For more information on this and other problem on Amateur Radio goto,

I would like to say the FCC is doing it's Job, but I can't as yet! We are still having Problems with jammers still on the 146.640, and other Tampa and Bay and Lakeland area Repeaters.

This problem has been going on now for over 5 years! Plus the 444.775 and 443.900 repeaters in Lakeland, FL are now being jammed by a CBer with a HTX-404 Radio Shack 440 HT Radio. We found him in a local parking lot, and the Police where called, But It's still going on and the Repeater op. Is now thinking of pulling the plug on the repeater due to this on-going problem, For he too feels that the FCC is doing nothing about the jamming problams... We are going to start lossing Repeater now in the Tampa and Lakeland, Fl Area due to jammers. To learn more about the problems on HF, VHF and UHF - goto the Jammer Information Center of Amateur Radio at,

http://www.geocities.com/~ke4jcd

I have links to other sites as well as Real Audio Sound clips of our on-going Jamming problems. Please send letters to the FCC and other GROUPS that clam to care about this hobby to help in the FIGHT to remove Jammers from our hobby before it's to late!

Message-ID: <71cjmrkva1@nnrp1.dejanews.com>
Source record: 159210
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

Is it just ham radio antennas that the LAFD are distroying or ALL (Including TV antennas) that are being removed by the LAFD?

Thought, if it is TV antennas as well, start writing all the TV stations within 50 miles saying that the LAFD doesn't want you to listen to their TV stations, I'm sure that will get you some press coverage by the TV stations..... When told "why don't you get cable" just tell them that the cable companys are just big fat monolpies of which you will not deal with.....

1690. A New HT

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-30 00:00:00 UTC
From: BColenso@aol.COM
Message-ID: <df7d366.36399026@aol.com>
Source record: 159211

I'm concidering buying a new 2m/70cm HT. I don't need one that hooks up to my computer, but I would like a jack to feed it with 12 v to get 5 watts out. I'd also like a good number of memories, and a receiver with a good front end (since it will also be used as a mobile), and all the standard bells and whistles. Any suggestions?

Who makes a good amp, with auto band-switching that will provide 30-40 watts out with 3 watts in?

Does Kenwood still use the *twist lock* battery packs on thier HTs? If they do, then I can interchange battery packs with my '215, which I plan on giving to THE wife when she gets her Tech licence.

Bob

ARLP044 Propagation de K7VVV

ZCZC AP44
QST de W1AW
Propagation Forecast Bulletin 44 ARLP044
From Tad Cook, K7VVV
Seattle, WA October 30, 1998
To all radio amateurs

SB PROP ARL ARLP044
ARLP044 Propagation de K7VVV

Solar activity was sharply lower last week. Average sunspot numbers dropped by well over half and average solar flux declined over 17 points to around 109. This seems to be cyclical though, since the average solar flux was down to the same level four weeks ago, roughly corresponding to the rotation of the sun. Average solar flux for the previous ninety days declined this week from 132 to 131, and the solar flux values were far below this value on every day of the past week.

Conditions were fair for the DX contest last weekend, and although solar activity was low, there was quite a bit of activity on 10 meters where the author of this bulletin operated mobile. An old IC730--unused since the previous solar cycle--was dusted off, placed in the car, and when hooked to a quarter wave trunk mounted whip. It was clear that 10 meters was back. Here on the west coast it was fascinating to observe the propagation following the sun, with many contacts to JA, VK and ZL around sunset.

KH6BZF sent a note on October 28 proposing that perhaps we have passed a temporary lull in solar activity, and to support this idea he noted several solar flux readings from the observatory in Penticton, British Columbia. These readings are taken three times per day, at 9:00 AM, Noon and 3:00 PM local time, although it is the noon measurement that is used for the official solar flux number for the day. The twelve consecutive solar flux readings for October 26 through 29 were 104.8, 104.1, 104.9, 101.7, 103, 103.8, 104.8, 107.8, 108.1, 109.7, 109.5 and 112.9. You can check the progression yourself on the web at Cary Oler's Solar Terrestrial Dispatch page at http://holly.cc.uleth.ca/solar/index, then click on "Solar Activity" in the left frame, then "10.7 cm Solar Radio Flux."

The predicted solar flux for this Friday through Sunday is 115, 115 and 120, and the projected planetary A index is 10, 8 and 8. This should mean slightly better conditions for the BARTG RTTY Contest this weekend compared to the CQ World Wide DX Phone Contest last weekend.

Look for unsettled geomagnetic conditions around November 3, and again from November 16-21, due to recurring coronal holes. Solar flux should remain above 120 through November 13, then retreat to 110 by November 20. This is all based on the previous solar rotation, so with luck perhaps some unseen new activity will rotate into view, improving HF propagation.

Radio Netherlands has a great collection of propagation web links.

See them at http://www.rnw.nl/realradio/propagation.html.

Sunspot Numbers for October 22 through 28 were 60, 71, 43, 49, 50, 17 and 33 with a mean of 46.1. 10.7 cm flux was 114.9, 112.5, 110.9, 107.5, 104.1, 103 and 107.8, with a mean of 108.7, and estimated planetary A indices were 18, 13, 13, 16, 7, 6 and 12, with a mean of 12.1.

The November issue of CQ VHF (p. 7) has a blurb about that.
Apparently the LMCC has stated that it will not actively pursue its
petition to reallocate 420-230 and 440-450 MHz to private mobile radio
service. Apparently they were grabbing what they could, so that they
could bargain for other, presumably better, frequency allocations. We
should send them lots of thanks for their respect for our bands.

Steve, please read the article again and you will see that he is causing interference to the cable company's two way radio system base and mobiles, not the cable system.

I agree, the person said that he was interfering on the cable co. 2-way radio system,
so I think that it can be only 1 of two things,
either he is 'throwing spurs' outside 2 mt.
or
maybe if he is very close to the transmitter site, a break in their coax, might allow
him to interfer (he would have to be very close)

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated September 14, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

NOVEMBER 1998

Nov 22 (Sun), Wheaton, IL. GMRS Electronics Flea Market. Dupage County Fairgrounds. Sponsored by GMRS of Illinois, Inc. Admission $5. Kids under 12 free. Open for setup at 6:30 AM. Building doors open for buyers at 8 AM. Info: (815)756-3933 or (630)393-3937.

Nov 28 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors,

diskettes, printers, keyboards, modems, disk drives, cables,
expansion boards, services, and anything else in the domain
of computers! Lake County Fairgrounds, Route 120 (Belvidere
Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000
sq. feet of everything Computer! For a show map, exhibitor
info, and discount coupon, visit the web site at

OOppps. Just responding based on a problem in my area, 2 hams within
100 feet of each other getting into the cable itself. If he's getting
into base and mobiles from a repeater system, then it sounds like some
equipment problem, a spur perhaps. In any case, the technical support
people for the system better get cracking...sounds like fines a popping
of the cable company starts complaining

Or...there could be a problem at the cable company, whereby their
receivers are out of "tune" and are re transmitting the 805
transmissions.

Either case, I'd start with the repeater system first

As a VE I have seen many people "Guess" and pass the multiple choice cw test we now use. I have also seem many people that I am sure know their code fail because of "Nervousness"....

I would like to propose a new testing system for code that I feel would work.

1st Drop the 5 & 13 wpm code requirements and make the requirement be 25 cw contacts in 30 days. This could be verified by #1. 25 QSL cards #2. signoff by 2 VE's or Extra hams who can verify the contacts were made.

I would also propose dropping the 20 wpm multiple choice test for Extras to 15 wpm with one minute of solid copy!

My Opinion,
Don, W6IQ

I am helping a friend fix his PC power supply. Its a switching mode type and we have found that the power semiconductors that drive the switching are type C2810 - one of these has gone open circuit. These are unknown to us and we can't find them anywhere on the web. If anyone can tell me what type of semiconductor it is and/or help me locate a pair (I am in the UK), my friend and I would be very grateful. Thanks and 73 Dave G3SEP (since '63)

Yep, I've seen that even on 10m. I used to get on 10m from here in S.W Houston, I had friends up in northern Houston, Say if we were talking to New York, the north Hou guy might lose the N.Y station say at 23.50 U. Right before fadeout the signals would jump way up for about 3-5 min. Then say 10 min later this would reach me down here in south Hou. Then I would get the peak and then fadeout. It was very predictable and did the same about every night. So when the north guy lost N.Y, I knew my time was limited. When the signal would jump up, I would say 73 till tomorrow, as the signal would be gone in 5 min. MK

Not too bad an idea. I've seen people that couldn't do 5 wpm in the real world, pass the 20 wpm code test by just guessing good and being lucky. Except one problem. How would they get on the air to work the stations before they had a ticket? Maybe a learners permit... I think 5 wpm for general, 10 wpm advanced, and 15 wpm extra would make sense and be a reasonable compromise from the status quo. But I think the tests should be graded from a copy standpoint with below 70% copy or recall failing. No q&a. Those that couldn't write could speak the letters into a recorder or something. MK

Passed all code tests with 100% written copy here. Nada mistake...

I don't like your idea.

How does a person without a radio make these contacts? (You have
introduced a requirement that you must first own a radio before
you can upgrade.)

How does an unlicensed operator make these contacts?

How does a Tech (who often owns only VHF/UHF FM gear) make these contacts?

> This could be verified by #1. 25 QSL cards

Who verifies that the QSL cards are legitimate?

It could take several months, and upwards of $50-100 to collect the
required number of cards.....

The cards would be easy to fake..... an applicant could just write
off to "Little Print Shop" and "Rusprint", and "W4MPY" for an envelope
of samples, fill them out, present them to the VE.

> #2. signoff by 2 VE's or Extra hams who can verify the contacts were
> made.

How (other than looking over your shoulder for 25 contacts) can
anyone verify the contacts were made?

Ha ha, so predictable. Hmmm let's see now, I've made claims about the number of hams who are freebanders and now someones asked me to name one. Oh I know, I'll fall back on the ole' name calling one liners and try to change the subject before everyone figures out I don't know anything. Sorry Dumbo, too late for that!!

ARRL BOARD REAFFIRMS, MODIFIES ITS RESTRUCTURING PLAN

In a special meeting October 24, the ARRL Board of Directors reaffirmed the bulk of its July 1998 Amateur Radio License Restructuring plan with some modifications. Among other things, the Board's July plan would eliminate the Novice and Tech Plus license classes. To provide a logical entry path to HF for Technicians, the Board now has suggested offering CW privileges to Technicians in the current General CW allocations on 80 through 10 meters. Technicians would be permitted up to 200 W PEP.

"The July plan eliminated the HF door by eliminating the Novice license," observed ARRL Executive Vice President David Sumner, K1ZZ. "This is, in effect, a replacement for the Novice, but without an

additional license class."=20

The Board also agreed to replace its originally proposed A, B, C, and D license class designations with Extra, Advanced, General, and Technician.

Under the July plan--and under the FCC's proposed streamlining--the entry-level HF license would be the General. Board members at the October 24 meeting near St Louis expressed concern that the leap to HF privileges under the July plan could prove too daunting, especially for younger newcomers. Under the ARRL plan, it would require passing two written examinations plus a 5 WPM code test to become a General. Some also were troubled about the growing gulf between the "traditional" HF operator and the newer VHF-only amateurs.

Addressing the Morse code requirement in the International Radio Regulations, Sumner summed up the Board's position by saying that the new privileges would amount to self-testing. "By their very nature, you can't use the privileges until you know the code," he said.=20

The special ARRL Board meeting was called to consider the League's comments on the FCC's amateur licensing "streamlining" proposals in WT Docket 98-143, released in August. Comments are due December 1. During the daylong session, the Board also proposed that the FCC rules ban multiple-choice Morse code tests and establish that a passing grade for a code test be either 70% correct answers to 10 fill-in-the-blank questions or one minute out of five of solid copy.

The Board affirmed its proposals in RM-9196 to improve the procedures for granting Morse code exam credit on the basis of a physician's certification of a disability. It also affirmed "its strong desire" that written exams be modified as necessary "to demonstrate better the depth of the applicant's current radio technical knowledge and operating skill."=20

The Board supported retention of the topic definitions to be included in written exams, as contained in =A797.503(c) of the FCC rules, with some modification to accommodate the new four-class structure.=20

The Board also reaffirmed its desire that Advanced class volunteer examiners be permitted to administer General class exams, and it renewed its request in RM-9115 for several rules changes involving RACES stations.

The Board noted that it had "heard and considered the views of thousands of ARRL members" on the amateur licensing issues raised in both the ARRL and FCC proposals.

FCC CRACKS ENFORCEMENT WHIP ON JERSEY HAM

The FCC has begun to crack its amateur enforcement whip. A New Jersey ham has been ordered off 40 meters until further FCC notice after allegedly causing interference to the ANARC Net on 7.240 MHz October 18.

The FCC also issued an Official Notice of Violation October 21 against James C. Thompson, KA2YBP, of Waretown, New Jersey.=20

Thompson, 58, was accused by FCC inspectors out of the Langhorne, Pennsylvania, FCC office with illegally retransmitting programs from a Standard Broadcast (AM) station on 40 meters and willfully interfering with the amateur net. The FCC also charged Thompson with failing to properly identify.

It's the Commission's first amateur enforcement action since the FCC announced it would consolidate amateur enforcement within the Compliance and Information Bureau under the coordination of Riley Hollingsworth, K4ZDH, the CIB's legal advisor for enforcement.

Hollingsworth said the FCC acted in the Thompson case on complaints from amateurs, but FCC inspectors did all the legwork. FCC inspectors at Thompson's home found an AM receiver "positioned adjacent to the Amateur station's microphone and tuned to 1450 kHz," the FCC said. Hollingsworth said FCC personnel used a combination of long-range and local monitoring and tracking to zero in on Thompson's QTH as the source of the interfering signal.

Hollingsworth said he anticipates additional amateur enforcement cases to develop as a result of calls to the Amateur Enforcement Line, 202-418-1184.

MITCH ACTIVATES HURRICANE WATCH NET

The Hurricane Watch Net, activated October 24 to keep an eye on Hurricane Mitch, formally stood down October 30 at 0100 UTC. By week's end, Mitch remained stalled off the coastlines of Honduras and Belize, downgraded to a tropical storm after pummeling the area with high winds and torrential rain for several days. Mitch began the week as an extremely dangerous Category 5 storm packing winds of more than 155 MPH. Nearly three dozen people have died as a result of the storm.

As Mitch hit its stride, the Hurricane Watch Net shifted late Tuesday to round-the-clock operation. Hurricane Watch Net Manager Jerry Herman, N3BDW, reports that the Net and the operators of W4EHW at the National Hurricane Center operated through the night on 3950 kHz and then resumed operation on 14.325 MHz during daylight hours, once 20 meters was open into the affected area. The Net secured operations after Mitch was downgraded to a tropical storm.

"Net members will remain on frequency informally to assist stations in the affected area as long as propagation lasts," Herman said. The Net could be reactivated should Mitch regain hurricane status, however.=20

The Hurricane Watch Net shares storm tracking reports with the National Hurricane Center in Miami via W4EHW.

Other Amateur Radio nets also have been active. The Mexican Hurricane Net was active on 7055 kHz. A Central America Emergency Net also has

been active on 7090 kHz.

The Salvation Army Net was reported monitoring 14.265 MHz to assist with health-and-welfare traffic. A health-and-welfare net also was active October 28 on 14.320 with W9KJI as net control.

NEW AMATEUR SATELLITE IN TROUBLE

SEDSAT-1, Amateur Radio's newest satellite, is in trouble following its successful launch October 24 from Cape Canaveral. After fewer than two dozen orbits around Earth, problems arose with the spacecraft's batteries and solar panels.=20

"This should not have happened," said SEDSAT coordinator Mark Maier, KF4YGR, at the University of Alabama-Huntsville, in a posting to SEDSAT team members and others. SEDSAT-1 was fabricated by students at the UAH. It was boosted into orbit by the same Delta II rocket that carried the Deep Space One probe into space. The package contains a Mode L digital store-and-forward transponder and a Mode A analog transponder. SEDSAT-1 has been heard from at various times this week, however, and ground controllers remain optimistic.=20

Maier said any hope of useful recovery depends on establishing uplink communication, "and the sooner the better." He said the satellite likely would need uplinks from more than one site "because the uploads will have to be compressed into daytime periods." Maier is hoping to upload code to alter the spacecraft's power-consumption cycle so it's more conservative.

"We can still activate the Mode A and imaging function, but only on a conservative schedule," he said this week.

Chris Lewicki, KC7NYV, of the University of Arizona reported earlier this week that telemetry from SEDSAT-1 indicated the spacecraft's power had dropped to zero at one point and the satellite reset itself. Intermittent telemetry suggests the batteries were not storing their specified 8 Ah. Lewicki said the satellite went quiet halfway through a pass over Tucson on orbit 27, indicating it had gone into its "power cycle" mode. Lewicki said in this state, the satellite notices that it is in extremely low power conditions and waits 10 hours until attempting to transmit again.=20

The solar panels appear to be producing as much power as expected, but Lewicki said they are "slow to react when exiting an eclipse period," so charging does not start until at least 10 minutes into a daylight cycle. As a result of the power cycling, images of the satellite's deployment from the booster were lost.=20

Maier said the team needs "full daytime data" for SEDSAT-1, and the SEDSAT team has been actively seeking monitors around the world to listen and decode telemetry for periods when the spacecraft is nearing the end of its day cycle and entering eclipse. He said the satellite's orbit "processes out of North America for fairly long periods"--a half a

day or more at a time--making it unavailable to ground controllers. The downlink is 437.91 MHz, 9600 baud FSK (with adjustment for Doppler shift). A telemetry program is available at the SEDSAT Web site, http://www.seds.org/sedsat/tracking.=20

"To use it, you must put your TNC in KISS mode and must set the appropriate COM port parameters," Lewicki said. Current two-line Keplerian elements also are available at the SEDSAT Web site. E-mail telemetry reports including the orbit number, your latitude/longitude, UTC, and brief description of hardware used to telemetry@seds.org.

For more information, visit the SEDSAT Web site at http://www.seds.org/sedsat/.

HAMS HANG TOUGH DURING TEXAS FLOODING

After nearly two weeks of flood duty, hams in Texas are battered but not beaten. Some individual stories of dedication and heroism also have begun to emerge from within the Amateur Radio ranks.

Many residents displaced by the flooding remain in Red Cross shelters this week. More than two dozen people died. South Texas Section Manager Ray Taylor, N5NAV, reports that at one point, hundreds of hams were active in Texas, Louisiana, Oklahoma, and Arkansas handling various flood-related duties ranging from net control to shelter communication.

"We've had awful good cooperation," Taylor said. Some hams from as far away as Nacogdoches, near the Louisiana border, volunteered. Hams manning shelters got some relief when the Red Cross was able to get cell phones. "We are beginning to secure the Red Cross net here in San Antonio," Bexar County EC Neil Martin, WA5FSR, said earlier this week. "There are still shelters open, but the Red Cross will handle everything by cell phone unless we have more problems."=20

Martin said the net control station at the Red Cross still was being staffed around the clock "because we are using a VHF/UHF linked system to communicate with shelters in Cuero, Victoria, and other areas toward the coast."=20

Martin singled out three San Antonio-area hams for special recognition--Shelter Communications Manager Bobby Rodriguez, K5AUW, Red Cross Liaison Stan Stanukinos, KA5IID, and Teri Thomas, KC5BJI. "Bobby and Stan have been at the Red Cross communications center almost continuously since Saturday afternoon with only snatches of rest," he said. "Teri has done yeoman service in finding and scheduling operators."

Taylor said prompt response by a ham couple in his area, Comal County, made the difference between life and death for some residents of a flooded mobile home park there. Taylor said husband-and-wife team, Susan and Leo Manor, NF0T and N0ERI, went down to the trailer park to check out the situation. "Nobody had warned these people," Taylor said of the residents. Using their vehicle, the Manors were able to pull several

trailers to higher ground before the water got too deep. "At least we saved some lives there," he said.

Taylor also credited Comal County EC Todd Covington, N5IJR, with taking time away from his own flood-damaged home to roll out the PrimeCo communications van and pressing it into flood duty. Two repeaters in the van have been aiding Red Cross communication.

Taylor said linked repeaters have ensured wide coverage. In addition, hams in Texas made use of HF nets on 40 and 75 meters for regional coordination. A voluntary communications emergency affecting net frequencies on the two bands has been rescinded, however. In addition to helping the Red Cross, Taylor said, ham radio operators have been providing communication and other support for the Salvation Army, the Dallas-based Baptist Men's Kitchen feeding program, and other outside relief agencies.

Taylor himself has been deeply involved in coordinating much of the flood emergency traffic throughout the affected region. He said this week that he expected hams to be active in the flood emergency "for another three weeks."

FCC SEQUENTIAL CALL SIGN UPDATE (view with nonproportional font)

The following is a list of FCC sequentially assigned call signs issued as of October 5, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S or contact the FCC, 1270 Fairfield Rd, Gettysburg, PA 17325-7245; e-mail fccitd@fcc.gov.

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was sharply lower last week. Average sunspot numbers dropped by well over half, and average solar flux declined over 17 points to around 109. This seems to be cyclical though, since the average solar flux was down to the same level four weeks ago, roughly corresponding to the rotation of the sun. Average solar flux for the previous 90 days declined this week from 132 to 131, and the solar flux values were far below this value on every day of the past week.

Conditions were fair for the DX contest last weekend, and although solar activity was low, there was quite a bit of activity on 10 meters, where the author of this bulletin operated mobile. An old IC-730--unused since the previous solar cycle--was dusted off, placed in the car, and--when hooked to a quarter-wave trunk mounted whip--it was clear that 10 meters was back. Here on the West Coast it was fascinating to observe the propagation following the sun, with many contacts to JA, VK and ZL around sunset.

KH6BZF sent a note on October 28 suggesting that we might have passed a temporary lull in solar activity. To support this idea, he noted several solar flux readings from the observatory in Penticton, British Columbia. These readings are taken three times per day, at 9 AM, noon and 3 PM local time, although it is the noon measurement that is used for the official solar flux number for the day. The 12 consecutive solar flux readings for October 26 through 29 were 104.8, 104.1, 104.9, 101.7, 103, 103.8, 104.8, 107.8, 108.1, 109.7, 109.5, and 112.9. You can check the progression yourself on the web at Cary Oler's Solar Terrestrial Dispatch page at http://holly.cc.uleth.ca/solar/index/html, then click on "Solar Activity" in the left frame, then "10.7 cm Solar Radio Flux."

The predicted solar flux for October 30-November 1 is 115, 115 and 120, and the projected planetary A index is 10, 8 and 8. This should mean slightly better conditions for the BARTG RTTY Contest this weekend, as compared to the CQ Worldwide DX Phone Contest last weekend.

Look for unsettled geomagnetic conditions around November 3, and again from November 16-21, due to recurring coronal holes. Solar flux should remain above 120 through November 13, then retreat to 110 by November 20. This is all based on the previous solar rotation, so with luck perhaps some unseen new activity will rotate into view, improving HF propagation.

Radio Netherlands has a great collection of propagation web links. See them at http://www.rnw.nl/realradio/propagation.html.

Sunspot numbers for October 22 through 28 were 60, 71, 43, 49, 50, 17, and 33, with a mean of 46.1. The 10.7-cm flux was 114.9, 112.5, 110.9, 107.5, 104.1, 103, and 107.8, with a mean of 108.7. The estimated planetary A indices were 18, 13, 13, 16, 7, 6 and 12, with a mean of 12.1.

DON SINNOCK, W0RWH, SK

Well-known VHF/UHF and EME op Don Sinnock, W0RWH, of LaPlata, Missouri, died October 24 after a lengthy illness. He was 59. Sinnock was an ARRL member.

IN BRIEF:

* This weekend on the radio: The BARTG RTTY Sprint is October 31. See October QST, page 108, for details. The HSC (high-speed CW) Contest is November 1. Just ahead: The ARRL November Sweepstakes CW is November 7-9! Also that weekend: The North American Collegiate ARC Championship, the IPA Contest, and the Japan International DX Contest. See November QST, page 97, for details. (Complete SS rules are in the October QST, page 118.)=20

* Vanity update: The FCC appears to be making a little headway in processing vanity applications. The FCC office in Gettysburg reports it has processed vanity applications received through September 30. On the most recent processing run, it granted 201 new call signs. Another 189 applications landed in the work-in-process (WIPs) stack. With the new $13 fee in place as of September 14, the FCC received a whopping 1499 vanity applications during the month of September--nearly 80% of them filed electronically.

* FCC sets exam fee reimbursement maximum: The FCC has announced that the 1999 maximum Amateur Radio volunteer examination reimbursement fee will be $6.49, based on a 1.5% Consumer Price Index increase between September 1997 and September 1998. The 1999 ARRL/VEC test fee will be $6.45. The 1998 ARRL/VEC test fee is $6.35. Note: Elements 1(A) and 2 are always free of charge at ARRL/VEC examination sessions.

* Correct dates for ARRL RTTY Roundup: The ARRL RTTY Roundup will be January 2-3. Incorrect dates had been posted and circulated. See December QST, page 95 for the operating event rules.

* New ARRL DXCC List: The November 1998 edition now is available. It's the ideal way to record the DXCC entities you've worked and QSLed! The latest printing includes all DX Century Club rules, Advisory Committee members, an expanded cross reference for prefixes and more. It's $3 from ARRL. Call 888-277-5289 or visit ARRLWeb at http://www.arrl.org and order Item 7067.=20

* New FCC Secretary mailing address: The FCC is slowly moving to The Portals. Effective November 2, 1998, the FCC's Office of the Secretary will relocate to The Portals, 445 Twelfth St SW, Washington, DC 20554. The Commission expects to complete its relocation to The Portals within the next six months. For information concerning paper filings, etc, see http://www.fcc.gov/Daily_Releases/Daily_Business/1998/db981023/pnmc8062.txt

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

=3D=3D>How to Get The ARRL Letter<=3D=3D

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

In Germany they have a "Learning License"...That would work. Also the VE's could be control operators. This test might regenerate activity on the Novice bands that was lost with the No Code Tech license.

TS-850 S has excellent audio, in part due to low 3-rd order IMD. Will
increased power lower the IMD? Increase from 100 to 140W is likely to be
noticeable in very few cases but the decrease in audio quality will show
up always.

Yes, now I know. That's what I should have done. I bought a nice
antenna(8-9db gain). Everyone always told me to spend the money on a
good antenna and not to skimp. So.. I bought a good antenna!

Unfortunately, I already put up the antenna and it's not returnable...

> "I wanna hear him TALK TOUGH!!"

Ha ha ha what a complete idiot you are, yea ham radio is so near death that the crew on STS-95 launched yet another amateur satellite. So glad your keeping up with the technology Dumbo, I can't believe your buddies on 75 didn't tell you about the new sat, I suppose you'll find some time to read about it in between making posts about bathtub floatillas and Stumpjumper updates.

It's a LEO with an SS center frequency of 436.5, thank god you don't have a clue how to uplink to it. You see Dumbo, this satellite requires a bit more than "more fire to the wire" and a set of PDL II's, haaaaa haaaa haaaa..... you f****ing moron.

Why did that happen? What's the explanation?

I've never noticed that happening, but I'll sure be watching for it
now. That's a neat phenomenon!

The only rule was you couldn't give the test to a relative. Otherwise
you (a General) could give the Novice or Technician test to your buddy,
code test and all, no other witnesses, just the two of you, all by mail.
And you thought the no code test was a recent thing...

Here in Anaheim, Ca., some of the most amusing listening over the past
five years or so revolved around individuals doing this very thing.
Some were well intentioned idiots and some were hecklers intent on
pissing off the cops. In either case the authorities found little
amusment in their antics and brought down the maul with dead
seriousness (much to the amusement of us evesdroppers).
If you need the cops, go thru the proper channels, (the phone).

Amateur QSOs are not meant for eavesdroppers (which you seem to be); two hams talking do not tailor their conversation to suit your desires - they discuss whatever is of interest to themselves. A QSO can be steered in any direction either participant wishes. If they have non-intersecting interests, then a common ground is often the WX or health; no different from what just plain folks (non-hams) discuss.

Why not list for us some of the topics you'd like to discuss on the air if you had HF phone privileges, Drew.

Jeff KH2PZ / KH6

> Does any one have the plans for a simple design i could build.

Don, see if you can find a copy of Ken Sessions' book "Repeater Handbook."
It's a bit dated but it contains the basic information you're asking for.
It's much more complicated than just wiring two radios together. Also,
look for the ARRL's "FM and Repeater Manual."

If you're looking for a 10-second explanation, here you go: Hold the
transmitter's mic up to the receiver's speaker; whenever you hear
someone on the rcvr, key the mic's PTT button - when the person
finishes his transmission, unkey the PTT. You're the "repeater"
controller, including the COR (carrier operated relay).

73, Jeff KH2PZ / KH6

P.S. I believe there is an email list devoted to repeaters, but off
hand I don't recall how to subscribe to it.

Something stinks here. Khalil has failed to show that LAFD was directly involved at all with the removal of his antennas. Were the two LA fire-fighters on duty and in uniform, and using LAFD apparatus? If not, then LAFD has nothing at all to do with Khalil's complaints. (Since one of them is a graduate of LA City College I suppose we'll next read of Khalil blaming the College for the removal of his antennas.)

Did Khalil ask the condo association's permission prior to erecting his structure? After all, he does not own the roof of the building - he's not free to access that space for his own uses. If he was not granted permission (or worse, didn't ask at all), but still raised his aerials, then I feel no pity for him.

You've done much greater damage with your past condescending remarks than
my single paragraph above could ever do. Regardless, what I've written
is true. Two hams in conversation do not give a second thought to enter-
taining SWLs such as yourself. (If this last sentence is enough to drive
such listeners from amateur aspirations, then they really weren't all
that sincere to begin with.)

You conveniently failed to submit the list I requested so let's run it
again:

Does anyone know where I can get a kit for a mobile HF amp?
Specs:
~300 Watts out
13.8V power
Stripline construction
10-80 meters

I had one and foolishly sold it! I believe that the ham who
built it got the kit from somewhere in Florida, but I'm not
certain of that.

If you can help, please email direct to: lmenzel@millcomm.com

1748. A new reader's response to the garbage

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-31 00:00:00 UTC
From: Paul Cooper <pcooper@primenet.com>
Message-ID: <363BFF32.520406E4@primenet.com>
Source record: 159056

I have read several statements by CBRambo and several responses from apparently fellow amateur radio operators. I should like to point out to you individuals that answering this person's remarks only places you one step above him or anyone else who spews garbage as he does. Apparently those of you who answer his diatribes feel the need to do so. God speed! Only, remember, when you do so, you show your need to compete with him. And if you have a need to compete with him, then you are not one step above, you are down at the same level.

All of you - go look in the mirror and ask yourself if you really want to be like this person. If you do not, then please leave this newsgroup for its ostensible purpose. If you do, then you need the services of a licensed psychologist.

Paul, K6PY

T E I X E I R A

I gave my buddy his Technician exam, code and all, in my home, in 1960
and all by mail. The closest ARRL handbook I have is 1963 and I just
checked to verify that (at that time) the *only* way to get the
Technician was by mail from a (one) volunteer examiner.

Not if the applicant lived within a prescribed distance of an FCC testing site. I don't remember the distance, something like a 100 or 150 miles. Only those living outside the circle got to get a mail order license as I recall.

Nahh, never had the need Drew. 6'2" and 195 is hardly Tubby although it's more than enough to kick your sorry ass.
Let me guess, your a fat dumpy f**k who doesn't have a girlfriend and couldn't get a girl in a bar to talk to him if his life dependeded on it? Am I close on this one Drew? heee heee. It shows in your preoccupation with everyone elses looks and weight. I guess being a DJ at a radio station still isn't quite enough to get thier attention eh fat boy?
I've seen your pic, did you trade in hair for more chin? Ever get laid without spending $60 Drew? As much time as you spend here it's easy to see why your not getting any. I've got a new web site, when I get a chance I'll post some recent pics of my wife and I. She works for Este Lauder as a makeup specialist, what's your woman do Fatboy? heee heee. You read like an old worn out book fatboy, your not getting any so your pissed at the world. What a pityful excuse for a man you are.

Obviously, there is a reason that someone would create a
foundation for no code license as viewed at http://www.ham.com
What reasons could there be? Is Perens in with equipment
manufacturers to sell more hardware to more hams that would
be created by no code? Does he enjoy taking lists for dx and
acting as a frequency cop? Is he really a cb'er at heart? or
does he just want to create a flap with his name near the center?
All of the above or none of the above....that is the question
and why?

You are correct except about the Technician license. With the
Technician license you had to go to an FCC office and be tested. At
that time the Tech & General test were the same. The only differece was
code speed.

Dave,
Allow me to be among the first to congratulate you to the hobby. I've
been a Ham for two years (am a General, studying for Advanced) and a CB
operator (even licensed at one point) for over 20. As a Tech+, you'll get to
enjoy HF, VHF, and UHF work. Hope to hear you on the HF bands sometime!

>Larry ve3fxq

Larry,
Well, I first started out with CB over 20 years ago, back in the last
years of the licensing requirements. Still have my old "Smokey" 23 channel
mobile radio. Transmits just fine, audio breaks up on receive. Have a bunch
of other CB's sitting around being used in one role or another (either as a
2-way radio or as a bookend).
First got my ham license 1 year and 8 months ago. My VERY first ham
radio was an ICOM IC-2AT that a friend lent me. Used it for phone and packet.
Now I've got an HF (Swan 350) rig, three mobile 2-meter radios (one being
used as a base), three handheld 2-meter radios (one usually used as a packet
station) and a handheld 440 radio. One of the reasons for so many VHF sets is
that my wife is also licensed and we prefer to use the VHF rigs to communicate
with each other over the CB's.

Joe,

We use digiboards modle PC/xE. This will add 8 ports with
onboard processor and ram to keep up with high speed data on
all ports. It uses onlt 1 IRQ. They also make a 4 port board.

Expect another great show tonight as The Great Liberty Net takes to the airwaves and confronts the jammers, belchers, marching-music-players, and other assorted malcontents. 2100 hours EST. Grab a chair and enjoy the circus!

It seems to me, good sir, that if the noise level on the above frequencies
isn't significantly worse than the noise level in this newsgroup, that I should be
able to deal with the situation with equanimity.

Then you haven't been on here for more than a couple of months
yourself. Check DejaNews. This whole thing took up lots of
rec.radio.scanner bandwidth when it was first cross-posted here during
the summer. It was followed by messages from LAFD officials
explaining that the whole situation was misrepresented and
misinterpreted. LAFD and LAPD are two of the most PRO-hobby-radio
public safety agencies on the planet.

>I can understand the second part -- about absorption falling until an
>optimum is reached, after which refraction begins to fall also.
>
>But I don't get the first part about "the frequency of the plasma
>resonance". What is the nature of plasma resonance?

The plasma resonance frequency is

w^2 = (4*pi*e^2*No)/Me

e^2 is qe^2/(4*pi*eo) which is 2.3068 * 10^-28 newton-meter^2
(a convenient way to gather up constants in equations of this kind)

Me is the mass of the electron and No is free electron density (or reciprocally
the mean free path of the electron) w is, of course, the plasma frequency
in radians/sec.

To see how this comes about, first picture a region with a certain number of free electrons. (There are an equal number of ions too, but their mass is so much greater than the electron we'll assume only the electrons move.) This plasma is in equilibrium with a uniform statistical distribution of charge. If a disturbing force comes along, say the E field of our radio wave, it will displace electrons giving a unequal local charge density. This produces a gradient field in the charged plasma and the electrons will be forced to move back toward their original distribution in response to the gradient after the displacing force quits acting on them. We can think of this like the behavior of a spring.

Now the electrons have mass, so they have momentum. This causes them to overshoot their equilibrium positions, and we have a simple harmonic motion. When the disturbing force is synchronized with this harmonic motion, we have resonance. As with a spring, where the spring constant and mass determines its free resonance frequency, the initial charge density of the plasma and the mass of the electron determines its free resonance frequency as well. The equation given above tells us what that frequency is for a given charge density.

At resonance, the displacing force and the restoring force work together instead of fighting each other, so we get a maximum amplitude of electron accelerated motion back and forth. This gives us maximum signal. This is analogous to when we cancel reactance in a circuit. The field forces come into phase.

Hello all:

I remember not too long ago (geez, maybe longer than I thought), there was a small company offering a nice wooden plaque that you could slip in a copy of your license and hang on the wall. It came out right after the FCC started printing out the new license format on their laser printer (ok, it's not new any more). In any case, I have a need for one, and I wonder if anyone can point me in the direction to purchase one...I looked in October QST and did not see an ad for one. Help!

CBRAMBUTT only counts the 75/20 meter frequency's (by the way, he's
only a tech and can't transmit on the frequencies that he trashes),
that include the war of Rich and Big Al. The rest of the band are made
up of nice people. Grow up RAMBUTT, upgrade then put in your two cents
worth. He can talk the talk but can't walk the walk.DREW A DURIGAN.

Sorry to hear that. Yeah, I know...the world is getting nasty all over. But
in comparison to other parts of the country, we have it pretty good out here.
I just moved up from Orlando; now THERE'S a crime mecca if I ever saw one!

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Funny how both post in a Kansas newsgroup.
Author Profile also shows that the two like the same newsgroups.
Funny, huh? Sorry Spew, you lose.

HAM-IV vs HAM-M vs HAM-II rotors.

Greetings. These rotors appear to be the largest rotors which fit the Tri-Ex W51 crank-up tower. I currently have an HD-73, which I am about to outgrow.

Can someone please explain the differences, and which one is more rugged. I have four long yagis (34 feet each!) for 2-meter weak signal work.

Which is the better choice given my space limitation?

73,

Al, NW2M

> QSO operator! That's not fair to all the people who don't want to be a DX CW
> QSO operators!

Operating HF cw has no relationship at all to DX. The huge percentage of the cw qso's on HF which we can hear are between stations which are in the U.S. and and/or Canada just like it is on the HF phone bands. In fact it's pretty difficult to work cw DX unless you have an Extra. That's why a lot of people who don't care about DX but use HF cw don't bother with the Extra.

From: ke4zv@bellsouth.net
Message-ID: <365471f9.100810683@news.atl.bellsouth.net>
Source record: 159140

On Sat, 31 Oct 1998 14:19:39 GMT, "Larry" <larya@home.com> wrote:
>I would like to know what you started out with, whether you were
>first licenced in 1930 or were licenced 2 months ago.

My first rig comprised of a used (actually much abused, patched, modified, and painted red) S-28 receiver and a pair of 211s configured as a push pull power oscillator on 40m (very chirpy, and self-rectified, ie raw AC on the plates). This was link coupled to 90 feet of wire strung out to form a "long" wire antenna. The S-28 had such a bad hum I thought my signal sounded fine.

Uncle Fed sent me a pink QSL, so I added electrolytic rectifiers (copper and aluminum strips in a lye solution in a series of mason jars) and Leyden jar condensers to clean it up. When I described this fix to Uncle Fed in my response, I was surprised by a knock on the door some time latter. Two gentlemen in suits wanted to see this chemical monster. (It boiled every time I went key down, but the note *was* cleaner.)

They were very polite to a kid working from radio manuals from the 1920s found in the county library. They explained some of the advances that had been made in radio since the Dark Ages, the hazards of hydrogen gas, and offered that my Novice license required crystal control of the transmitter. A few days later a brand new 1963 ARRL Handbook appeared in the mail courtesy of these gentlemen. I still have it here on the shelf.

After some dumpster diving in town behind the Radio-TV repair shop (the shop owner, and later my very good friend, Bethel Brown, "threw out" some of what I needed while I was there), a 6AG7 crystal oscillator driving a 6DQ5 PA, and supplied by a 5U4, replaced the chemical monster.

BTW, that equipment was built with a real soldering iron, a big chunk of copper plated iron with a wood handle, heated over the fire in my daddy's forge. When I later got a Wen electric soldering gun, I was in hog heaven (still have that Wen too).

In the back of the Handbook in those days were ads for new amateur equipment. I nearly wore out those pages. I worked very hard, and my traplines were good to me (we lived *way* back in the boonies). The next spring a brand new B&W 6100 ($495 amateur net) and barely used National NC190 graced my operating desk. They served me well during my days as NCS of the Kentucky Traffic Net. I still have the B&W, the

National Drift-O-Matic is long gone.

BTW in the meanwhile I had made friends with some REA linemen and they came out on a Staturday and set some poles and strung up a nice big rhombic for me. I had a pretty potent signal in those days for only a pair of 6146s. That antenna was later driven by an old 1930s vintage Federal Broadcast transmitter I got from the radio station where I was working. Then I *really* had a potent signal, but only on AM of course. I never did figure out how to use that broadcast PA as a linear for the B&W. (I know how now, but the old Federal has long been landfill.)

Surprisingly, our county had a very active ham club, but I didn't meet many of them until much later when I got my driver's license. We lived too far back in the weeds to be part of that social set. So I didn't really have an elmer, aside from a fellow on a neighboring farm who was a retired Western Union man. He taught me Morse (American Morse it turned out), but he didn't know anything about radio. I got licensed through my school radio club, but they weren't much help otherwise. The teacher in charge didn't know much more than we did.

I had to scratch out most of what I learned by digging in books I found in the county library, and from that Handbook those FCC fellows sent me. That was enough to get a First Phone, and a job in broadcasting. That started me down the path to where I am today.

You lose again, Thrower. Re-read the thread and try to apply your meager comprehension skills. I said that IF I were K1ZZ, I would be considering a libel action. But I am *not* K1ZZ, as the original poster of this thread has alleged. I am Drew Durrigan from Kansas, as I mentioned earlier. We agree, Thrower. You're right. You got me. So, what's your beef?

>
> How does a Tech (who often owns only VHF/UHF FM gear) make these contacts?

The whole thing could be done with the candidate operating as a guest op at a licensed station in his neighborhood under the supervision and control of a licensed operator. It's already completely legal. Any unliscensed individual can operate a U.S. ham station with my mode under these conditions including foreign nationals.

> > This could be verified by #1. 25 QSL cards
>
> Who verifies that the QSL cards are legitimate?

The licensed op who owns the stations the candidate used. The candidate totes around a logbook in which all the qsos are signed off by the licsensed operator who witnessed the qsos. Put the log sheet and instructions for both the candidate and the licensed op in the ARRL website as a .pdf download. Both would have to sign off the fact that they obeyed the instructions and the qsos were not rigged, etc.

There would be a requirement that there be qsos with stations in at least four U.S. states. Those qsos would be indpendently verifiable and would cut down the level of fraud. When he/she gets to his/her 25th signed-off qso (or more) he/she passed the entry-level code test without a dime spent on equipment or with a need any other paperwork. To keep it honest (all things being relative) the candidate must have operated at least two stations at two locations and be signed off by at least two licensed ops with General or higher tickets .

>

> The cards would be easy to fake..... an applicant could just write
> off to "Little Print Shop" and "Rusprint", and "W4MPY" for an envelope
> of samples, fill them out, present them to the VE.

Don't bother with QSL cards. It could take 50 or more qsos the get the 25
cards. The whole thing could be finished in a few hours of operating time.

> > #2. signoff by 2 VE's or Extra hams who can verify the contacts were
> > made.
>
> How (other than looking over your shoulder for 25 contacts) can
> anyone verify the contacts were made?

See above. The concept has definite merit and needs to be further explored.
Under any conditions it would beat hell out of the incredibly lame and
fraud-ridden multiple-guess code tests we have today. Any candidate who can
successfuly wade thru 25 cw qsos at any speed would have had a much more
rigorous and meaningful cw checkout than I did when I took my code machine
5wpm test.

There is a new type from Levtron that are supposedly much more immune to
noise. What they really need is some way to single back to the
controller that that have received the message. As it is, it's just sent
a command and hope it gets there.

Why would you need to?

Dial 911 or your local police. They have enough problems without
someone interfering with there channel. It's not going to get them
there any faster. I would suggest [not] trying to talk to the police
with your handheld ham radio. Things like your talking about happen
every day and sometimes when you don't know it through MDT or other
means thats why you should not even be on there with your hand held.
You could endanger officers lives who are at a distance trying to
communicate with the dispatcher. Even thoe you don't have the correct
squelchtone you could key over them causing them wasted valuable time
and even maybe there life.

Furthermore this also ruins scanner enthusiasts already tarnished
name.

This is the most idiotic thing I have read in a long time.

The problems on 20 and 75 meters are being caused by long-time licensed amateurs...all of whom have passed a code test of at least 13WPM. Not "no-coders", not former CB'ers, but fully-licensed amateurs who have been feuding in this manner for years.

>was surprised at how sharp the boundary was. It's not often that I see
>a propagation effect so clearly illustrated.

It is easier to notice on the higher frequency bands because pesky
D layer effects don't mask it. What's happening, of course, is that
the plasma frequency of the ionosphere is falling due to loss of solar
excitation. That means that the refraction angle supportable becomes
shallower at a given frequency. Right at the critical frequency for
the path, the signal frequency matches the frequency of the plasma
resonance, in other words that segment of the ionosphere becomes
a resonant element in the path. So naturally, signals tend to peak just
before they fade out.

Overdense paths suffer more absorption, and of course underdense
paths allow the signal to pass through the ionosphere off into space.
The strongest signal always occurs right at the critical frequency for
the path. That's why 10m and 6m are often so exciting. Very little power
is required to work the world when operating so near the critical
frequency. But conversely, propagation often comes and goes like
the flicking of a switch.

That would work. After they pass the written then allow them to work CW on the novice bands. This would get things going on the novice bands again. Also, back when I took my novice test you had to find a Ham with a General license or above. This Ham had to write to the FCC for a test, administer the test, then mail it back....oh...he had to give a 5 wpm code test. I would allow a new ham to operate my station to make his 25 contacts. This would also be an idea for club stations....

T E I X E I R A wrote in message <3639EC59.4F97@ccnet.com>...
|As a VE I have seen many people "Guess" and pass the multiple choice cw
|test we now use. I have also seem many people that I am sure know their
|code fail because of "Nervousness"....
|
|I would like to propose a new testing system for code that I feel would
|work.
|
|1st Drop the 5 & 13 wpm code requirements and make the requirement be
|25 cw contacts in 30 days. This could be verified by #1. 25 QSL cards
|#2. signoff by 2 VE's or Extra hams who can verify the contacts were
|made.

Fair to who??? This says that in order to be on HF you HAVE TO BE an DX CW QSO operator! That's not fair to all the people who don't want to be a DX CW QSO operators! It's just one more version of the "incestuous licensing'!

Never happen in a million years! It will absolutely not work! It's too convoluted (even for the ARS).

|I would also propose dropping the 20 wpm multiple choice test for Extras
|to 15 wpm with one minute of solid copy!

The way it should be is 1 minute of solid copy for the 'receive by ear' portion and 1 minute of solid transmisson for the 'send by hand' portion. No waivers! Now that is fair, equitable and meets International requirements! OBTW, that, of course, will be on a straight key only please.

1825. ACS Newsletter for 25 October 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-31 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <71e4j4$bor@news.Hawaii.Edu>
Source record: 159172
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <706>
.....

>From the Editor's Desk:

For those of you who have missed an ACS Newsletter or EMCOMM Bulletin for some reason, you can download a duplicate copy on the ACS Home Page at http://acs.oes.ca.gov Click on the EMCOMM Bulletin bar, and you have access to all EMCOMM Bulletins we've done since 1985, as well as all of our ACS Newsletters.

Several Newsletter subscribers have written expressing disappointment that more isn't being written on the Year 2000, or Y2K, problem. As of Monday, October 26th, there are only 431 days left until we find out what systems will continue working and what will crash in a flaming heap of silicon chips. To keep up with the latest happenings, point your browser to the Y2K CPR Year 2000 Preparation Resources Home Page at http://www.y2knet.com A general look at the Y2K issue can be had by using one of the Internet's many fine search engines with Y2K in the subject field.

We haven't seen many articles in any of the hobby's major magazines reflecting the possible impact on the amateur radio or emergency communications community; hopefully the issue is being researched by one of these magazines for future publication.

Whether our systems will fail or not really isn't the issue; as emergency responders and managers we have a responsibility to mitigate potential hazards before they can have a negative impact. As we continue to get more information on Y2K web sites, we'll pass them along to you. Y2K is coming; it's time to start planning for a potential flood BEFORE your feet get wet. Stay safe, everybody -- see you next week! Dave Larton, Editor

.....

Please Welcome:

Michael Reagan <mreagan@csun.edu> Pasadena CA

First licensed in 1990 during the last gasp of Novice licensing before the No-code wave, I made Advanced class in January 1991.

Emergency communications was one of my main incentives to get a ham license, and I have sought training wherever I could get it. As a result, I can probably be accused of being a "card collector."

My employment is at California State University, Northridge, where I have participated in drills with the Campus Police, served as building emergency coordinator for the Library, trained in the CERT program after the earthquake, and expect to be "part of the solution" should a disaster strike while I am on the job.

My home is in Pasadena, where I am a member of the Pasadena Radio Club, the Pasadena Emergency Communications Group (Station 12F in L. A. Co. DCS -- my DCS call is Mary 065), the Pasadena Arson Watch, and T.O.R.R.A., which provides a marvelous opportunity to work in a large directed net.

I have also trained with the Kaiser Permanente Amateur Radio Network, and am registered with ARES, which is unhappily rather quiet in the Los Angeles section.

I am the Pasadena Radio Club liaison to the Los Angeles Area Council of Amateur Radio Clubs, and am a member of the organizing committee for the October 1-3 1999 ARRL Southwestern Division convention on the Queen Mary in Long Beach.

I also manage the web sites for several of these organizations:
http://www.qsl.net/arrlsw/ the Southwestern Division
http://www.qsl.net/arrlsw/lax/ the Los Angeles Section
http://www.qsl.net/arrlsw/hamcon/ the 1999 convention
http://www.qsl.net/w6ka/ the Pasadena Radio Club

As you might guess, I am also one of the major contributors to my Library web site: http://library.csun.edu/

For more about me, try: http://www.qsl.net/kk6wo/ or
http://library.csun.edu/reagan/
.....

Current Events:

From: "Richard Lambert" <richard@theideabank.com>

On Monday, October 26th, 'The Battle Against Arson' will air on
the A&E Channel. It was produced in cooperation with fire
departments and juvenile fire setting programs in Illinois.

Tune in if you have a chance.

From: Jack Mackinnon, K6TYF <Surveyjack@aol.com>
Subject: Union City, CA RACES Drill

On Saturday, 17 October Union City RACES was activated for an
emergency drill by Capt. Connie Van Putten of the Union City
Police Department. Shortly after 8 AM she telephoned Rich
Martinez, KG6MH . The test was to determine whether amateur
radio could handle the Police Dept. radio traffic in the event
that the 800 MHz. trunking system were to fail. Rich
immediately put out a call on the 146.610 repeater for
assistance. One ham was in the area and agreed to assist by
making periodic announcements on the repeater while Rich made
telephone calls to others in the Union City RACES organization.

Four amateurs arrived at the PD within a few minutes and began
preparations to place an amateur station in the dispatch center
and have hams ride in the patrol cars with officers. Within an
hour and twenty minutes all of the patrol cars had an assigned
ham in the car and communications between the cars and the
dispatch center was being handled by amateur radio. In all,
twelve amateurs assisted and covered all necessary police
positions including the Sergeant^&#xFFFD;s office and Animal Control.

During the next hour the 146.610 repeater was used exclusively
by RACES to handle all of the communications necessary to
operate the Police Department. At approximately 11 AM all hams
were brought back to the Police Department by the patrol
officers and there was a general debriefing over doughnuts and
coffee.

A couple of lessons were learned by those attending the drill.
The first was that hand held radios without external antennae
were useless within the dispatch center. A noise level of 40
db. over S9 was being generated by all of the computers in use.
An attempt was made to place a magnetic mount on a desk in an
adjacent office, however this only reduced the noise to S9
because the basement of the building is full of computers,
fluorescent lights and other noise generators. A length of RG-8
cable was used to extend an outside antenna lead from the room

used as an Emergency Operations Center to Dispatch and suddenly the noise was bearable and a hand held radio was usable. It is a good idea to check any possible operating locations to determine what the limitations are for that location. We solved the problem by running a 100^&#65533; of RG-8 coax from the roof-top antenna drop into the dispatch center.

One amateur was riding in a car and his battery failed. That patrol car had to return to the station to get another radio for the ham riding in that car. This points out that it is necessary for everyone to be prepared with at least a spare battery. Alkaline battery packs are essential. A cigarette lighter power cord would be a good accessory also.

Dispatch also had a little difficulty hearing one of the amateurs when they were on the far fringe of the city. Some antenna gain from a magnetic mount antenna would add greatly to signal strength.

The dispatcher using the radio (under supervision of the amateur Control Operator) had a difficult time trying to hold the microphone and transmit while also using the computer keyboard. We had forgotten to explain the courtesy tone and squelch tail on the ham repeater system and the dispatcher thought that the squelch tail was someone trying to call her. Once that was explained it was better. A headset and boom microphone with a foot operated switch would have been a very good idea.

To correct these difficulties, a dedicated antenna lead directly to dispatch will be installed in the near future. As well, a radio with proper equipment such as the boom mike will be provided. Those present also saw the need to have spare batteries and a magnetic mount antenna when going out for a drill of this type.

All in all, this drill pointed out to the officers that amateur radio operators could provide a service in time of their need. Additionally, it gave the hams a greater appreciation of the trials and tribulations of the dispatchers, and the jobs that the patrol officers have to undertake during the course of the day.
.....

HUNDREDS OF HAMS VOLUNTEER FOR FLOOD DUTY

The death toll is approaching 30 in central and southern Texas as flooding that began last weekend continues to affect downstream communities. South Texas Section Manager Ray Taylor, N5NAV, reports that at least 425 hams are active in Texas, Louisiana, Oklahoma, and Arkansas handling various flood-related duties ranging from net control to shelter communication. With public telephone systems already overloaded or out of service,

hams have been supporting the Texas Department of Public Safety by providing communication between its Austin headquarters and affected communities such as Victoria and Corpus Christi.

Taylor says the worst damage so far has been in the New Braunfels area in Comal County where he lives. Hams are providing communication assistance for the Dallas-based Baptist Men's Kitchens feeding program there and elsewhere as well as for the Salvation Army and other outside relief organizations. Taylor credited Comal County EC Todd Covington, N5IJR, with taking time away from his own flood-damaged home to roll out the PrimeCo communications van and pressing it into flood duty. He says two repeaters in the van are aiding Red Cross communication.

San Antonio and Bexar County also were hard-hit by the flooding. Bexar County EC Neil Martin, WA5FSR, says amateur have been providing continuous support for the Red Cross and other agencies since midday last Saturday.

Six shelters were open in the San Antonio area. Another 20 or more shelters remain open between San Antonio and the Gulf Coast, and additional shelters were being opened as other areas were affected to the east and southeast of San Antonio.

The Red Cross has had to rely more heavily than usual on ham radio assistance because its San Antonio headquarters was flooded out. The Red Cross has set up temporary headquarters at Fort Sam Houston, but it has only a few telephone lines available, Martin explained. "This lack of telephone capability is why we are having to man all of the shelters 24 hours a day," he said.

Martin said the long hours have begun to take their toll on the amateurs who have volunteered for duty, and he and Taylor have expressed concerns about finding relief operators. "We've had awful good cooperation, but we don't have enough operators without pulling them from somewhere else," Taylor said. He said he expects hams to be active in the flood emergency "for another three weeks."

The flooding and tornadoes last weekend knocked out power and telephone service for tens of thousands of Texas residents. In San Antonio, the 911 system was overloaded at one point with calls prompted by flood-related problems.

At Taylor's request, the FCC has declared a voluntary communications emergency. Hams are being asked cooperate by relinquishing the use of 7.285 and 7.290 Mhz during daylight hours and 3.873 and 3.935 Mhz during the evening. The FCC has asked hams to clear the frequencies within 3 khz on either side. The communications emergency remains in effect until it's

rescinded by the FCC. -- The ARRL Letter

This week's EMCOMM Bulletin:

EMC155 A Deep Thought! On Floods 1/2
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the California Governor's Office of Emergency Services

EMC155 A Deep Thought! On Floods 1/2 For release 10/26/98

Did you ever think of comparing various long-range weather forecasts to earthquake predictions? Well, perhaps they have something in common; at least that was the thought of one RACES training officer: "If we wait long enough, we would be able to say that the prediction was completely accurate, or entirely wrong."

That observation led Ray Grimes, W6RYS - training officer for Orange County RACES - to realize it could be a mistake for their RACES unit to totally ignore such predictions from 'experts' by discounting it since we've heard it all before.

The result was that Ray wrote an excellent article, titled "A Deep Thought" for the September l997 issue of the Orange County RACES newsletter "NetControl", and with permission it is here paraphrased. This can be applied to emergency communications units in general, not just that particular RACES unit. In the following, the editorial "We" means _your_ unit!

"What could we do during a flooding emergency? Conventional landline communications would likely be disrupted in many communities where underground cables exist. That could render the residents isolated when utilities fail and they will need communications for routine and emergency services. Some may require possible evacuation. We could provide situations reports for select neighborhoods. Observers for flood watch may be needed on street overpasses watching flood control channels for victims and potentially explosive floating LPG tanks. Hospital, Police and Fire will need situation reports and timely

information on available resources such as hospital beds available, food and water, and transportation. We can provide backup communications for all of these agencies.

"Don't forget the human side of field response. Wetness and cold can speed the onset of colds and flu. You will need to manage your own comfort and warmth, exchanging clothing and socks often if necessary, while remembering to eat and sleep regularly. A zip bag can hold cold pills and aspirin, just in case. Flood water can be contaminated by bacteria from sewage, or chemical runoff such as gasoline or pesticides. As often as possible, wash yourself and equipment off with fresh water from a hose". (Continues next week) - - -

Hi everyone, I am looking for an old Lafayette portable battery pack
model number HB-506. This pack holds the old 23 channel HB-525 and
HB-625 series mobile radios. It has a built in pull up whip antenna,
a small battery meter on the top and of course the "c" battery holders
inside.
If you have one of these and you would like to sell it please e-mail
me direct at:
mrusso@hoflink.com

Thanks, Mark

I am studying for my exam, my local radio shack does not have the books
I need.
I have found all the material on the www, except table nto-1.
Any info on where I can find it online would be very helpful.
Or if you have the table and the ability to scan and e-mail it to me
would be even
more helpful.
Looking forward to passing the exam and becoming a amateur operator.
thank you in advance.

Greetings fellow amateurs

Over the past 30 some years, that I have been an amateur (1964), I have heard many stories of what amateurs have started out with, their first receiver and/or first station. Many amateurs suggest, to newcomers, that you can get on the air with equipment costing you under $100.

I would like to know what you started out with, whether you were first licenced in 1930 or were licenced 2 months ago.

I have a website http://members.home.net/larya/ve3fxq.htm of which I would like to add a page that would like to have examples of what amteurs started out with. I think this information would be very valuable to todays beginners.

Larry ve3fxq

Then answer this for me Drew, KF4DDM...why did you ever bother getting
into ham radio?

Answer: After getting the low level license you found
out to get into real hamming required work.

If you hate ham radio so much, based on your many post's on the subject.
Why are you in this group?

Answer: Since you can't, or won't upgrade, you want to make life miserable
for the rest of us.

Of course what probably happened is this, he gets on a local 2 meter
repeater and act's like he does here in the newsgroup. Attacking and
harassing. They told him to take a hike, and here he is. Close Drew?

To answer the original question...."Who was playing the 20 minute workout
on 14.313" That was Vincent Diak, WB2PDW. How do I know that? A fellow 7
miles away confirmed it, and several other amateur's in a 30 mile radius did
the same. Not to mention the FCC had a clean hit on him.

As to Drew's comments....I have to agree with him. Most if not all of the
major jammers are indeed old time ham's. So before you lay the blame on
the newcomers, please check out what is really going on.

I can understand the second part -- about absorption falling until an
optimum is reached, after which refraction begins to fall also.

But I don't get the first part about "the frequency of the plasma
resonance". What is the nature of plasma resonance?

Ham radio is dying. You will soon realize the largest benefit of your new
amateur radio license is that you can now carry your scanner legally in your
vehicle.

Hey Larry
I was a Novice operator in 1976. I learned the code on a military
modified 40meter receiver. My first onthe air station was a Hammurland
HQ-110 and a Heathkit DX-60 Transmitter. My first contact was on the
forty meter band with a dipole antenna 20 ft off the ground.
Today I'm a advanced class operator with a IC 740 in the moblie and to
fixed stations. One is a TS 930 with a SB220 amp in to a full wave loop
on 75m and the other station is a Yeasu 767GX with a Dentron Clipperton
L that I use on 10 meters, I have three antennas up for ten. I have a 4
element quad fed horizontally, a 3 element quad fed vertically and a
amtron 99.
I would say that this is a far cry fron what I ran in 1976. By the way
my novice call was WB3EXZ.

1850. Tokyo HyPower reflector

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-31 00:00:00 UTC
From: KU4QD <cait.martin@ibm.net>
Message-ID: <363b2784.0@news1.ibm.net>
Source record: 159197

Hi, everyone,

I recently bought a Tokyo HyPower HT-750, which has to be the absolute best ham radio purchase I have ever made. There are a couple of not-so-great pictures of me operating the rig at Hemlock Bluffs (a wildlife refuge near Cary, NC)on the radio page of my web site. I'll be operating from Falls Lake (near Creedmoor, NC) this Saturday on 6 and 15 meters with it. It really is the perfect rig for portable QRP operation.

When I posted to the QRP-L about the HT-750 I got a ton of e-mail from folks who were curious about it, wanting to know how to get one, wanting to know how I got one (Dumb luck, really), wanting to know how I liked it, and so on... This rig really seems to capture the imagination of QRP and 6 meter operators.

Anyway, the HT-750 is one of three pieces of Tokyo HyPower equipment I own. It struck me that most manufacturers have a reflector to discuss everything from technical issues to buying and selling to operating anecdotes, but not THP, so... I started one.

Anyone is welcome to subscribe. The list will cover both equipment marketed under Tokyo HyPower's name and OEM equipment manufactured by THP (such as the monobanders sold first by Amp Supply and then by Kantronics). Who knows, maybe those who want to buy an HT-750 (which is still in production), or any of THP's other current models, can arrange a group purchase.

If you'd like to subscribe, please go to the following URL:

http://www.onelist.com/subscribe.cgi/thp

It should be a unique discussion.

Thanks and 73,
Cait
KU4QD

I don't know if this is the right NG for this, but you should be able to help.

I am interested in getting started with HAM radio. I was wondering if someone could explain to me or point me to a site that could explain to me a few questions.

The first is what kind of license do you need to use a handheld radio.

The second is how do the phone services work, and with them who all can you call?

Any help is greatly appreciated. Thanks in advance,

Joe

Hey, congratulations!

Don't know where you live, but here in Alabama I hear a lot of CW operators sending about 5 wpm (and faster too) in the "novice" portion of 40 meters. Both day and night. There are plenty of opportunities for QSOs on 40.

I put up an old TV mast about 30 feet high and hung a 40 meter inverted "V" from it as my only antenna. 40 meters CW was the only band and mode I worked, from a Tech Plus through Advanced. I worked 49 states with it. You might like 40 also.

Post your new callsign, operating frequency and best time for a contact. I look forward to a QSO.

from north Alabama,
Tom K4AKC (yep, it's a store-bought call sign)

(remember, the internet doesn't count the same as DX!)

1854. IC-Q7 Software update

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <71iej9avi1@news02.btx.dtag.de>
Source record: 158952

The new version IC-Q7 1.00 Final beta is on

http://home.t-online.de/home/Ingra-Beton

Following changes/add/mods are made

- added Super-RX mode for Frequencies below 30MHz
- method described how to upload memories below 30MHz
- added copy/paste in the scan edges grid
- added pointer to remember Com Port
- The Software will not crash if the Q7 is not connected
or powered off, it will recognize now "IC-Q7 is off"
and "IC-Q7 not connected"
- added a "Del" button for erasing Frequencies
- extension for the data files changed to .Q7

Greetings, ...

> few questions.

Joey, you can start by going to the ARRL, American Radio Relay League, web site
at arrl.org
there you will find names of clubs, people in your area, and other related
information.

> The first is what kind of license do you need to use a handheld radio.

Assuming your talking about VHF amateur hand held radios you can operate them
with a Technician class license. The test for this license is available through
many clubs and volunteer organizations througout the country. Look for the list
of VE's or Volunteer Examiners on the ARRL page. You can also download the
question pool for the test.

> The second is how do the phone services work, and with them who all can you
> call?

Many repeater sites have phone patch capability, but not a full duplex
operation, that means only one person at a time can talk. Just the same as if
the other person were on a radio. You can call anyone but most repeater phone
patches are limited to local calls only since someone has to pay the phone bill!
Additonally these are personal calls only, no business may be conducted.
At one time a phone patch was quite unique long before the days of cellular
phones, most hams I know use thier cellular when a call is needed and phone
patch only when without one.

If you can't find what you looking for I'll be glad to help.

My first first rig: a 40 meter, two-tube (12AT7 and 6L6GC) crystal controlled 25-watt transmitter which I built from plans in an old book, found at a second-hand store. The parts came from flea markets, hamfests, and old electronic parts stores.

Also at the second-hand store, I bought an old Hammarlund HQ-200 receiver. My antenna was a 40 meter inverted V hung from an old TV mast. My rig wasn't handy to operate, but I made a lot of contacts. And the heat from the tubes warmed my fingers during the winter.

I suppose this could be a story from years ago. But I did this as a tech-plus one year ago!

Why would anyone download a piece of unknown virus software from an unknown
sight and installit on a system? Looks to me like an excellent way to
PROPAGATE a virus.

1864. Re: A new reader's response to the garbage

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: jimd7002@aol.com
Message-ID: <19981101111417.25071.00002875@ng-fi1.aol.com>
Source record: 158999

I agree with this one 100%!! Who cares who's fat, who has three chins, and who works at what radio station?

What does all of this have to do with Amateur Radio? While not all people involved in the hobby act like this, it sure gives a grim picture to someone who wants to see what we talk about on a daily basis.

Can we please get back on topic? I admit that this NG has .misc on the end of it. However, I don't think that means that we can get this far off center. Please don't assume that the rest of us want to read your back and forth responses with the endless name-calling. It may be important to you, but not to the rest of us.

'Nuff Said....

Gee, thanks for that rapid update. Like I have nothing better to do than worry about who's jamming who on the liberty net.

Why do you assume that the rest of us are interested in the grade-school escapades of someone with a radio? If you have a group of people who are interested in this so-called news, set up an email list and KEEP IT AMONGST YOURSELVES!!!

Geez...

Big deal....

Rich (aka PorkButt) does not claim to be well educated, at least in the formal sense. Your implication that a single spelling mistake makes him stand out as an idiot is patently ridiculous, because virtually *everything* written in this newsgroup is filled with spelling, punctuation, and grammatical errors. So what if he bungles a sentence? How much is written here that ISN'T a full-fledged assault on the English language?

The bottom line is that this stuff is old news. If you have a problem with the guy, just come out and say it.

1867. QUESTION on PRC-1000

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: sds22@rocketmail.com
Message-ID: <363c8a2b.1125517@news.chesco.com>
Source record: 159002

Been thinking of getting one......have no experience with "computer radios", is there any problem with computer noise in the audio? When my computer is running I get the usual computer noise in my IC-706 Mk II and in my TS-690s. Is this a problem with the PRC-1000?
Thanks in advance for your comments.

I'm looking to purchase a HF radio, I haven't been off the air for over 8 years.
However my lic is still current. Have been out of touch with Amateur radio manufacturers and need some suggestions on what would be a good HF rig to purchase. Looking for something solid state with digital display and etc.
My first HF rig was Swan 500 which I had for many years. Wish I had never sold it...
Any suggestion welcome.....

I will agree to stop the verbal assaults if Drew does. But, he will
only stop for a while then change his user name, and come back with
another one to start all over again denying he's Drew. It's been going
on for years now. Funny how the above posts only make reference to my
flames on Drew and not his on every post on here. Almost every post
made by people, even a new guy who wanted only a pat on the back for
passing his test, gets the "Drew treatment". Lets see how long it
takes for CBRambo to go away and another one of Drew's flamebait names
to appear. You don't believe me? Read below

> comments shouldn't have any significance whatsoever

Hey Drew, I didn't say I wasn't amused by you. Your right, your comments don't have any significance, with good reason, you never SAY anything except tossing around some 5th grade name calling and trolling. Your great at that, but then again so is Masataka Noda, and Burt Fisher. Your in great company with them.

Your not much of a challenge when it comes to debating an issue, primarily because you don't know anything, but it's still fun watching you try to make a point only to get raked over the coals from your lack of knowledge on the subject.
It seems to take about 2 posts or so on the same subject then your done. Only thing left is to throw stones and hide behind your mama, which you seem to have mastered.

Yes Dumbo, you are a joke. Now dump in your comments about a greasy face or being tubby, it's all you've got left.

Hi People
On the links sub page of the radio section of my homepage
is a direct link to a great freeware program. It will grab most of
the Trojans and retros that have been appearing during the last 6
months. It will NOT put a new TSR on your system so it will not
conflict with the big commercial AV's already on your system. I like
to run at least two AV's on my system - what one doesn't catch the
other most likely will. The trick is not to have them conflict which
they often will if BOTH are running TSR's.
By the way, if you haven't seen the new Mosley mini
tribander you can check it out on the Mosley page. It is really
tiny!! Very convenient for a temp QTH.

I'm trying to find out the date my old callsign, (WB2PRU) was issued. Unfortunately, the FCC records and other resources on-line don't have information old enough to help.

I'm trying to determine if the call was issued in 1976 or 1977. I'm pretty sure the call appeared in the Callbook in 77, but may have been issued in 76. I was a Teen at the time, so my failure to hold on to the information must be excused as youthful idiocy.

Anyone with old callbooks and/or supplements who can provide me with any info? I would be very grateful.

73, Harv, K2PI.

From: Dave Burr <dtburr@lumisoft.com>
Message-ID: <363CAC79.3D11@lumisoft.com>
Source record: 159011

Seb:

I know a guy who had one, although I can't confirm that it was exatly the model number you gave.

Just remember that if you don't have it high, it is not worth having. There is very little directivity in a dipole that sits on a puny little tripod on your roof or some similar setup. You're better off throwing up a wire. Same result and cheaper.

BTW, don't get offended, but using a subject statement like "Info please" is much less helpful to you and the people that would help you than a subject which describes what it is you are seeking. Virtually everyone on here, if they had a question and wanted to be lazy, could put something like that as their subject, but thankfully they don't. Lots of those messages don't even get read.

"Question on Cushcraft Rotatable Dipole" would probably make you appear more savvy and get you more information. You might want to take a look at the UseNet FAQs.

>Technician was by mail from a (one) volunteer examiner.

Let's set the record clear (to mix the pickles):

When the Novice and Tech licenses came in (1951-52) the tests had to be taken at an FCC office or at an FCC quarterly examination point (what we used yo call "the travelling road show"). The Novice was a one-year non-renewable license, and one could hold a Novice and Technician license - with two counterpart call signs such as K2ASP and KN2ASP - simultaneously.

If you lived more than 200 miles from an FCC office or quarterly examination point, you could take the General exam from another amateur and get a Conditional class license.

In the late 50s the Novice and Technician class licenses were changed to a "volunteer examiner" system, giving rise to the Technician (C) license.

Further down the time line the Novice license was made a two-year license and later was made a renewable full-term license.

In the mid 1980s the present "volunteer examiner" system came into being and the FCC no longer gave examinations at the offices or at the quarterly examination points.

1878. Re: What ham radio is today.

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: Freeland <Freeland@chickasaw.com>
Message-ID: <_72%1.289$85.3579701@news.goodnet.com>
Source record: 159013
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Perhaps I'm disqualififed from
talking about the "good old
days" (I'm less than 60 years
old, never had a QSO with
HPM, and got my license as one
of those newfangled
Conditionals.

My "good old days" started in
the early 60's, just 35 years
ago, but here is what I
remember.

.... hams didn't bicker with
each other about who was more
"deserving" than another.
Nobody got a special deal
because
they could beep faster or
remember more electrical
formulae
than someone else. I got my
Extra in 1963, well before
disincentive licensing, and it
was simply just another
personal
accomplishment, and did not
"elevate" me above other hams.
We
all shared the same spectrum,
worked together to solve the
same
problems, competed in
contests, trouble-shot each
others radios,
and generally had fun
together. If you forgot the
numbers for
the dipole formula, it was OK
to ask someone else. If your
Morse speed was 10WPM the
speedier guys would slow down
for you,

not QSY to some specially
reserved band segment. The
one or two
"old timers" on 75 meters who
didn't like newcomers ("No
lids, no
kids, not space cadets") were
universally looked down on as
poor
examples of what a ham ought
to act like. The Novice bands
were
a "cacaphony of exhuberance"
to steal a term that K1ZZ used
in
a meeting yesterday here in
Minneapolis. Old hands were on
those
Novice bands also -- it was
not unusual to hear W4KFC or
W5ZD
patiently working WN4KKN or
WV2CNL -- nobody remarked that
it
was "nice" of them to do
that -- it was just part of
being a
good ham. The notion that you
had "earned" your license
never
occured to anyone -- we were
just excitedly "playing in the
ether", and there was no
distinction on the air between
Extra,
Advanced, General, or
Conditional -- elitist special
callsign
formats to celebrate the fine
granulations of your testing
skills
had not been invented.

Today we are sliced and diced
into 6 different classes,
carefully
divided into our own special
frequency segments, and Lord
protect
the Extra who suggests that a

new Technician, who didn't
pass his
exam in front of a bored and
stern FCC clerk, might have
something
to contribute to our beloved
Amateur Radio service.

I respectfully propose that
all current six license
classes be
scrapped and replaced by two
new classes "Beginner", and
"Helper
of Beginners".

I use the STB 4COM card with reasonable success.
This was an under $100 card that provides four serial ports.
You can use the standard I/O and IRQ with these, or select
four new settings (from a limited group). If you are careful,
you can use your standard two from the PC and four from
here for six serial ports. It can also do LPT, but I never fooled
with that. Never had a need for more than one LPT. I would
use a switch if I did.

3W, VIETNAM. Eugene, RA0F, reports to OPDX that Coly, UA0FM, will be active again from here as 3W5FW during the middle of November. Coly's equipment is a TS-520 (near 180W), ICOM-700 and FURUNO (marine TX for HF, 400W), 2 element Quad for 20/15/10 meters and a for 40/80/160 meters he uses a GP's. Coly does not have antenna for the WARC bands, but he will try using his Quad with tuner. On 160 meters, look for him on 1826 kHz and RX +3 up (1400-1500z to USA, 1930-2030z to EU and at his sunrise at 2300z. QSL via: P.O.BOX 66, Vladimir, 600011, Russia

5N, NIGERIA. Bogdan, SP5CPR, will be active as 5N3CPR once again. He will be here until the middle of December. He will be active on all bands. The QSL route is OK via his Polish callsign via the bureau, "he prefers bureau confirming".

5R, MADAGASCAR. The French DX Bulletin "LNDX" reports that Andre/F6AOI, Alain/F6BFH, Bernard/F9IE and their wives will be in 5R-land from November 15th to December 7th. They will try to be active from Sainte Marie Island and Nosy Be (both are IOTA AF-057). Activity will be on all bands CW and SSB.

5R, MADAGASCAR. "The 59(9) DXReport" states Ake, SM7CIP, will be active as 5R8FU for at least one more year. His activity includes RTTY, but he is currently putting up antennas for 160, 80 and 40 meters. He was heard this past week on 28485 kHz arouns 1315z. QSL via SM0DJZ.

9Q, DEMOCRATIC REPUBLIC OF CONGO (ex-Zaire). The "DX News Sheet" reports that Pat, 5N0T, and XYL Nicole, 5N0YL, who are waiting for licences, report an application for the Association of the Radio Amateurs Operators of Congo was made to the Government in Kinshasa in September. Approval is awaited from the Minister of PTT, and then licences should be issued.

AFRICAN ACTIVITY. From the "Picture DX Bulletin", ZS6HZ states he will be traveling to Arusha, Tanzania (5H), at the end of November, early December, 1998. He will also be traveling through Zimbabwe (Z2) and Zambia (9J). The actual dates are still unknown, but ZS6HZ has to leave South Africa on November 27th and has to be in Tanzania on December 5th. He is guessing that he will be in Zambia around November 1-3rd and again around December 9-11th. Callsigns are also unknown at this time as he is trying to obtain license for these three countries. He states that he would like to operate SSTV from these countries as well as SSB. Expect signals to be weak because he will be operating from a vehicle using dipole antennas.

BV9P, PRATAS ISLAND DXPEDITION. The following was from a press release on the upcoming BV9P operation which takes place 0600z November 12th through 0000z November 19th. Operators will be as follows: BV2KI/Bruce, BV2KS/Evan, BV2VA/William, BV4AS/Jimmy, BV4FH/Paul, BV4ME/Chung, BV4QA/Ou, BV7FC/Lieon, JA1BK/Kan, KU9C/Steven, OH2BH/Martti and the first YL ham on Pratas XE1CI/Nellie. Suggested frequencies:

CW - 1885-1905, 3505-3515, 7005, 10135, 14055, 18085, 21055,
24895 and 28055 kHz
SSB - 3795, 7055, 14195, 18125, 21295, 24495 and 28495 kHz
RTTY - 3550, 7030, 14080, 21080 and 28080 khz

QSL Manager will be KU9C. Those wishing to contribute financially to the BV9P operation, send your contributions to:
Chinatrust Commercial Bank Feng-Yuan Branch P.O. Box 163
#341, Chungshan Road, Feng-Yuan city, FENG-YUAN City
Taichung Hsien, Taiwan R.O.C. -or- 420 Taiwan R.O.C.
Account Name: Chiang Hui-Yu (Paul Pai/BV4FH)
Account No# 392-13-13826-06

E3, ERITREA. By the time you read this the "Space A DX Group" should have arrived in Asmara, Eritrea, the nights of November 3rd, and 4th. They will make every attempt to be active starting during the day of November 5th. They cannot get their callsigns until they are in Eritrea, but they were told it would be assigned starting at E30AA and up. They will use only one call unless required to use each operator's call. They will be active until midday of November 17th, and fly out just after midnight the morning of November 18th. With the added $500 dollars cost per operator for the license, and the recent activity from Eritrea, they have scaled down to 10 operators. They are: WD4NGB/Bruce, KO4RR/Joe, N5VL/Vance, IV3FSG/Elvira, I8NHJ/Max, EA8AFJ/Michel, OK1TN/Slavek, N9NS/ Mike, NF6S/Larry and DJ9ZB/Franz. They plan on operating 3 stations 24 hours a day. This week's complete/unedited press release will be sent to all OPDX InterNet Subscribers as an additional bulletin.

E3, ERITREA. Zoli, HA5PP, continues to be active as E30HA, reportedly making over 7000 QSOs so far. He is trying to put up something for 40 meters, so keep a lookout for him there. Also, he is going to try to be active on CW. He wants to stay until November 8th, but he may go back with better equipment just before the CQWW CW Contest. In between, he has plans with Yemen. QSL via HA5YPP: P.O. Box 1157, Budapest, H-1245, Hungary, Europe

GD4, ISLE OF MAN. Steve, G4UOL, will be active as GD4UOL on CW only on all the HF bands from 2000z Friday, November 20th to around 1600z Friday, December 4th. QSLs should go to the GD bureau rather than his home callsign as this speeds up the process. QSLs direct are via his home callsign of G4UOL. Skeds via email are welcome outside the contest. Send them to: steve@g4uol.demon.co.uk
Steve expects to concentrate this year on 18 and 24 MHz, as long as the bands produce QSOs. More information about his previous trips can be found on his WEB pages at: http://www.g4uol.demon.co.uk
In the CQWW CW Contest he will be Single Op/Low Power, unassisted.

HI8, DOMINICAN REPUBLIC. Another Bavarian Contest Club (BCC) operation will take place from as DL1HCM/HI8, from November 24th until December 6th, from Samana Peninsula in the northern part of the Dominican Republic. Mike, DL1HCM, will be an entry into CQWW DX CW Contest as SOP/all band/ high power. Outside the contest the main emphasis will be CW on 160m, 80m and WARC bands. Mike states, "I will take a microphone with me for SSB operation, but please don't expect too much, I am a very untrained SSB operator." QSL to DL1HCM, via bureau or, direct to: Mike Peters, Moislinger Allee 72, 23558 Luebeck, Germany.

LA, NORWAY (Special Suffix). Ben, OZ5AAH (ex: OY5IPA,OX3IPA, TF/OZ5IPA+), will be active as LA/OZ5IPA from Oslo, Norway, November 6-9th. He will also be an entry in the IPA (police) Contest (Nov. 7-8th). Ben works all bands CW/SSB. He will be "OK" for most police awards. See the photo in "CQ-magazine", July, 1997. QSL direct only to: PreBEN Jakobsen, 9 Knoldager, DK-2670 Greve, Denmark.

PACIFIC DXPEDITION (Update). Last week we reported that Karl/DL1VU and Gerhard/DJ5IW would be active this week from T32-land (Christmas Island), but this is just a start of a string of activities. The "DX News Letter" reports that Gerhard, DJ5IW, will return (not sure where) on Decemeber 1st, but Karl will go on and travel to the following: Kanton Island signing T31AF, to Western Kiribati as T30CT and to Banaba as T33VU. More activities are planned, but they will depend on the transportation facilities. All QSLs via buro for T32IW/T32VU via DJ5IW, all others via DL2MDZ.

QSL INFO AND NEWS.....
PY1MF/P DXpedition to Ilha Grand Island (SA-029) can be QSLed via the bureau or to PY1MF.

Andy, RW3AH, reports that a new WEB site is now active for the 1997-1998 9X0A DXpedition. For QSL information and details on the 9X0A operation, check out the address: http://www.qsl.net/9x0a

NOT ME! Roger, G3SXW, informs OPDX that the callsign YA1R was issued to him in 1970. Many QSL directories/lists currently list Roger's callsign and his QSL Manager at that time, G3TXF. Roger reports just recently he has received inquiries about YA1R who has been active this month, and he has started receiving direct QSL cards. Roger states, "This is not me! I have not been in Afghanistan since 1973. Sorry - I know nothing about this operation and cannot help with information or QSL cards." -- 73 de Roger/G3SXW.

QSL information, photos and a story about the RA1QQ/1 Russian Arctic Islands IOTA expedition (July 25-28th, 1998) can be found at the following WEB site: http://www.geocities.com/pentagon/bunker/4755

Bernie, W3UR, Editor of "The Daily DX", reports that on October 30th, he mailed out all the A61AJ bureau QSLs (3,000+) to the ARRL out going QSL bureau. He is still missing logs from April 1, 1998 to date, November 26, 1996 to November 22, 1997, and logs prior to November 17 1996. He does have logs for these dates: November 17, 1996 to November 25, 1996, November 23, 1997 to March 31, 1997. All direct requests for these dates have been mailed out. Anyone still needing a QSL may send to: Bernie McClenny, W3UR, 3025 Hobbs Road, Glenwood, MD 21738, USA Bureau cards get answered once or twice a year.

Josep/EA3BT and Nuria/EA3WL report that their activity from Martinica logged 7085 QSOs in just 6 days of operation, during which they were active on all modes (SSB, CW and RTTY) with the callsigns FM/EA3BT, FM/EA3WL and TO8B (during the CQ WW SSB Contest). Their logs are now available at: http://www.redestb.es/personal/j_gibert
Their WEB page will be updated with their operation as soon as they get some pictures processed. Remember that the QSL route of all the 3 callsigns is: Josep Gibert, Col-legi, 1, 08800 Vilanova i la Geltru, Spain

Charlie, W0YG, reports that all direct requests to date for his A22 and Z21 operations, were answered as of October 30th. PLEASE NOTE: Charlie states that he has been getting lots of requests with IRCs that are "not stamped". Please make sure your IRCs are stamped (refer to OPDX.370.2 and OPDX.371). Charlie states that he cannot use unstamped IRCs, so he will return those cards via the bureau.

SILENT KEY. Egene Korotkov, RW0AY, became a Silent Key on October 7th. Egene enjoyed working DX and designing radio equipment. Condolences to his wife and family.

SK7, VEN ISLAND (Rare Swedish Island, IOTA EU-137). A group of 9 operators from the Swedish DX-club SSRA (SM7AVZ, SM7BCX, SM7CQY, SM7DAY, SM7DDR, SM7DXQ, SM7EQL, SM7MPM and SM7NGH) will operate from this island from 1500z on November 6th to 1300z on November 8th. Theu will use the callsign SK7DX. Two stations will be active: One station consisting of IC-765, Drake L4B and a 3 element tribander; the other one with a Kenwood TS-570 and a R7 vertical. Both stations will be on the air around the clock. Listen for them on the normal IOTA frequencies. QSL to SM7DXQ direct: Mats Freden, Klagerupsvagen 258. S-21232 Malmoe, Sweden or via the

bureau.

TM5, FRANCE. The LNDX reports that Dominique, F5SJB, will once again be active as TM5CW from November 27th to December 7th. He will participate in the CQWW CW Contest.

TY, BENIN (Just a reminder!). Look for the German team of Sigi/DL7DF, Tom/DL7BO & YL, Frank/DL7UFR and Tom/DJ6TF to be active this week from November 4th to November 17th. They will operate especially on the low bands and on CW, but SSB and RTTY are also possible. They will use 2 complete stations. Look for them on the usual DX frequencies. QSL via DL7DF.

VK9C, COCOS-KEELING ISLAND. Hide, JM1LJS, informs OPDX that he will be going here December 26, 1998 to January 2, 1999. His callsign will be VK9CL. Hide will operate on 80-10 meters bands CW/SSB/(FM). He states that his operating station will be a "simple system" due to the weight limit of the airplane: 400W+DP or GP. Hide adds that from January 2-4th, look for him to use VK6SJS. If you hear him sign VK6SJS/HRP on January 3rd, his QTH is the "Hutt River Province" (He states there is no credit of DXCC for this location). QSL infomation is as follows: Hideyuki Kai, 4-22-15, Takata-Higashi, Kohoku-ku Yokohama-City 223-0063, JAPAN (Please note: Address was changed and the callbook address is not correct.)

VK9L, LORD HOWE ISLAND. Plans are well underway for a DXpedition to Lord Howe Island between November 22nd and December 1st. The callsign to be used will be VK9LX. It has been reported from a press release that the bulk of the equipment has arrived, and the team members are signed up. The team leader is Nick, VK2ICV. The other team members are: Bill/K6KM, Charlie/N0TT, Ray/N4RU and Mary Lou/NM7N. The DXpedition has two purposes: to provide a DX contacts with Lord Howe Island and to participate in the CQWW CW Contest. Before the contest they will be operating 2 stations on all the HF bands, including the WARC bands and 160 meters. Operations are also planned for 6 meters. Modes of operation will be CW, SSB, and RTTY. Before the contest they will be emphasizing operations on the low bands and WARC bands, propagation permitting. During the contest they will be operating as Multi/Single working all HF bands except the WARC bands. Propagation information for the various bands has been prepared by Bob, NM7M, and is available on the VK9LX WEB site. QSL via VK2ICV, Nick Hacko, P.O.Box 730, Parramatta, NSW 2124, Australia. For further information check the VK9LX web site at: http://qsl.net/vk9lx
E-mail for the DXpedition can be sent to: vk9lx@qsl.net
Those wishing to contribute financially to the DXpedition to help cover shipping costs, etc. should check the web site for information on where to send donations.

VU4, ANDAMAN AND NICOBAR ISLANDS. Ted, W2FG, reports that Nat, VU2NTA, is now making another attempt to try to obtain permission for a VU4 operation. Nat states the the going is pretty tough with the government, and they are "very unsupportive on the matter", but he is hopeful. He (Nat) has requested for all DXers to send him an E-mail showing their callsigns requesting the activation of Andaman & Nicobar Islands by

Indian amateurs. (PLEASE NOTE: Nats states, "THAT ANY REQUESTS TO JOIN THE EXPEDITION BY NON INDIAN HAS and WILL DEFINITELY MAKE THE EXPEDITION A NON STARTER!!!!!!) For support, Hams/DXers are to mail their requests to Nat at: vu2nta@amsat.org

YA, AFGANISTAN. The "DX News Sheet" reports that Mike, K5KWG, is trying to obtain permission to be active during his regular work trips. However, Mike is currently active in a Albania until December 1st as ZA1MH. QSL via Z32KV.

ZK3, TOKELAU. It seems that Ron, ZL1AMO, was not able to book passage on the boat to the island to operate as ZK3RW during last week's contest. Reports indicate that he will try again this week.

ZL8, KERMADEC. Bob, ZL1RS, has announced to look for ZL8RS to be active from the Kermadec Islands, November 9-17th. Bob states that he intends to focus mainly on 17/15/12/10 meters SSB with some slow CW on 30 meters. Operation will depend on his work schedule. QSL via ZL1RS (R Sutton, 109 Wright Rd, RD2 Katikati, New Zealand). To see photos from Bob's last trip, check out the WEB page: http://www.qsl.net/zl1rs

1881. Shure 444 mic hum problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: Dave Evans <Dave@devans.demon.co.uk>
Message-ID: <039iEFAA3LP2EwMv@fred.com>
Source record: 159016

I have a 444D which seems to pick up mains hum, particularly when in the high impedance setting.

The metscreen around the mike element / transformer seems to be connected ok, so I can't understand why there should be a problem.

The leevel of pick up is pretty high, such that the hi-Z position is not usable without comments on-air.

Anyone had this / know of a solution?

Thanks

Dave

So you're saying that only about 20 kHz, out of the 500 kHz of which
that band is comprised, was lost to intentional QRM? If so, then you
had 3500-3895, 3905-3945, and 3955-4000 kHz in which to operate.

480 kHz out of 500 kHz. What's to complain about?

Of course, you coming on here and defaming someone but not signing your
name or callsign places you in the newsgroup QRM catagory...

Yeah, remember that the ionosphere isn't a thin conductive sheet.
It's effective depth is at least several wavelengths at the frequencies
of interest. And the electron density gradient varies across that
depth as a function of height.

It is also worth noting that we are dealing with absorption and
re-emission in all cases where we're interacting with this sort
of media. While simple ray tracing models work, they give us
a somewhat misleading idea of the physical processes going
on in the plasma.

Tnx

1886. Re: What radios did you start out with?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: Don Vlack <k2dv@rochester.rr.com>
Message-ID: <363CD8A5.73EB3552@rochester.rr.com>
Source record: 159021

I was licensed in 1990. I had taken the test given by two hams who were general class operators. My first hamfest was Rochester, NY (a fairly good sized one) I had a ticket on the way, and it was time to get a radio. My elmer had sort of dropped out of ham radio right before the introduction of solid state devices. As such, he didn't trust it, and persuaded me to buy something that was "hollow" state and easy to fix. I got a Heathkit DX-60 transmitter and borrowed his Radio Shack DX-330 receiver. I put a beam filter on the receiver and that was my setup for about two years. I was fortunate enough to get the Heathkit VFO with the DX-60, so I wasn't rockbound, but I didn't have a microphone, so it was all cw. CW was all I did for the first couple of years, didn't even own a 2 mtr rig until about 1994.
I've met more local people after having joined a local radio club, and getting on 2 meters to keep in touch with them, but the real thrill of radio was back in those "dip the plate, tune the grid" cw days!

Perhaps to help others avoid the unnecessary expense of investing several hundreds of dollars in ham radio equipment...only to later ask themselves "what was I thinking?" and end up selling said equipment for pennies on the dollar.

Have another drink, Jim, and don't worry about it. Besides, if she was running
"only" 500-600 watts, she most likely wasn't heard anyway since the jammers on
the frequencies you mentioned typically run several thousands of watts.

I didn't have much money at the time and had little to no experience with used or kitbuilt equipment. Bought a Century 21 for $380 and had a ball during the last cycle. 1978 to around 1980 first DX contact was ZS6, about 40 watts to a dipole, thought I'd fall off my chair, a couple years later I sold it and bought a Drake C Line for around $900.

At that time, with the xtal filters for CW and dual VFO's I thought it was all the radio I'd ever need. Still a great performer but 60's technology. Now it's all QRP and homebrew. If I had it to do over again, I'd find a good Elmer and look at something like an old Heath HW-16 after operating a lesser radio you'll have an appreciation for one with bells and whistles.

Rose colored glasses? I remember a net called Westcars (West coast amateur radio service) that operated in CA in the early 60's. It was on the same 40 meter freq day in day out and arranged mobile and phone patch traffic. The malicious interference and bickering that went on rivals what you hear today.

Tell me more. Funny that those of us on the FCC staff didn't
know anything about this.

Are you confusing this with the "sale of call signs" scandal
that went on for many years but became public when the examiner
involved was finally nabbed by the FBI and sentenced to time in
the Federal pen? That was a few years later (mid 1970s).

Hello !

If you were going to create a new website for all amateur radio operators what type content should that website have ?

I have contemplated creating a website that would be a central resource location but hesitate not fully knowing what that resource content should be.

Any suggestions ?

Thanks ! And please respond directly, whether it be constructive suggestions or simply criticism.

That was WECARS on 7255 kHz, and was the subject of a lot of
FCC jammer df-ing in the 1970s.

Just to set the record straight, in 1948 I built my first HF
one-tube receiver from plans in the Boy Scout "Boys' Life"
magazine, and the first words that I ever heard over it were on
twenty meters. I quote from memory:

"Hey, you lop-eared jackass, get off of twenty meters."

Ham radio has gone downhill from there.

I used to have a class "D" license in the early 70's. Seems it was to
operate a CB radio and cost $5.00 - Is that what you were referring
to?

Tom

My kid sister can't get on the net except for early morning, because
where she lives, one line is all there is, and it has several people on it.

I sent her your message about voicemail. Her son is intensly diabetic,
so incoming calls are important to her.

Several others on her party line may want this.
Thanks for posting it.

And don't forget the ultimate no-brainer comment to creep into (primarily) 2 mtr. repeaters....the practice of giving a call sign followed by"for I.D.". News flash--I.D. is the ONLY purpose of a call sign...I suppose these same people turn on the light and announce"for illumination". Apparently these people think all listeners don't have a good grasp of the obvious....<<Rick,KB4RZ>>

While I have no great love for CW of any kind except Cold Water that I can
think of, I should note that as a VE you could for example send supposed
practice material at the proper speed after a ham has not passed one
CW receiving exam, and if that is copied properly, honestly certify that the
individual in question copied CW properly.

I'm often shocked at how people look to change things that don't need to
be changed and then ignore things that do. For example 25 QSL cards
might take years to acquire for some people, and I'm also not convinced
that CW QSOs are that valuable an indication. Most of the ham populace
doesn't seem to regularly send or receive CW as far as I can tell even if
one is silly enough to exclude technician class licensees as hams. Personally,
I'ld be happier with a 5 wpm exam for HF to comply with treaty obligations,
and anyone who was interested in CW proficiency could get an ARRL
certification, or work CW to his or her hearts content on HF, VHF and UHF
in the amateur bands. There is not a single amateur frequency I know of that
doesn't have CW as a legal form of transmission and there is no reason to
change that. If the populace doesn't use CW, it will fade away, if a
significant portion is interested enough, it will survive and prosper, either
way,
the present system doesn't do anything for amateur radio.

Nope, while FCC officials could give the tech exam back in the 60's and
occasionally did, especially for people who came in to take the general
exam but couldn't pass the 13 wpm test, most of the techs from that era
were tested by General, Advanced or Extra Class hams. It should also
be noted that a tech license given by the FCC had a special feature, if you
passed the 13 wpm in any FCC exam later, you were a general without having
to take the general class exam again, techs who had been tested by other
hams didn't get the same feature.

Well, I gave a bunch of them singlehandedly, and all did
take code test, though I often didn't tell them until after
it was already finished...they thought it was a "practice"
session... Lots less nervousness that way.

1934. Novices on General Bands

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-01 00:00:00 UTC
From: jmslater <jmslater@mvillage.com>
Message-ID: <71h21h$555$1@supernews.com>
Source record: 159080

Maybe I am in a minority here, but I have heard in the not too distant past a female Ham operator causing problems on the General portion of the Ham bands. (swearing, jamming, etc.) When I "ran" this female's call, I discovered that she was only a Novice.....always was a Novice.
Call me a grump if you wish, but I see this as just one more example of the "dumbing down" of Ham radio. Since when is it OK for a Novice, who gained her ticket under dubious circumstances, to run 500 or 600 watts on the General bands? I suppose that she works her way around this since her husband is a General class licensee and she uses his equipment for her hateful diatribes.
I have a sinking feeling that the Ham bands are going to go by the wayside of CB.....too many Deliverance type banjo playing idiots with not enough mental sharpness.
If you doubt me, listen to 14.313 or 3.901 some evening and hear what the "BARF" idiots are doing.

Question: If you add up the I.Q. of the BARF members, how far below zero would you be?

Sorry Bill,

Only the Novice test was administered by Hams. I had to go to the FCC office in San Francisco to take my Tech/ General. The "only" license administered by Hams was the Novice. Even today an Advanced license VE can't give the General test. Back then the Tech & General were given the same test.

Ok.. I am wrong on this one.... being so close to the FCC office it was
not done around the San Francisco area. So the distance from an office
is the key.

It was "75 miles airline" and Madisonville, TX satisfied that requirement.

Glad to help. I saw some accusations posted and dealt with them concerning this post and my "alterior" motives. It was thought to be "too commercial" etc. Unfortunately, in this day and age of everyone seemingly trying to give the shaft before they get it themselves, a hint of something helpful is seldom viewed as just a helpful hint. Im so glad that all the "Elmers" that get people started in ham radio do not hold back helpful hints or we may have some pretty desolate bands right now. If this post helped one person, regardless of the negativity in some comments, it was worthwhile and I'm glad it was done. Good luck.

Larry wrote in message
Greetings fellow amateurs

<snip> ...

I would like to know what you started out with, whether you were
first licensed in 1930 or were licensed 2 months ago.

Hi Larry,

The day my license arrived in the mail, in December of 1981, I called my neighbor, Chris - WB8FBN, to tell him I finally got it. I did mention that I had no transmitter. Wouldn't you know it, a little while later there was a knock at the door but by the time I got there no one was there. There was, however, this big heavy radio thing sitting on the porch..a Johnson Viking II. What in the heck do I do with this? Hehehe.

I called Chris again and told him and let him know it had no crystals in it but that I happened to have a box of them. The only crystal close enough to a Novice band frequency was "6906.667 KC." Chris told me how to grind the crystal using Comet on a sheet of glass.....my desk just happened to have a glass top on it....yeah I frosted the corner of it working on the crystal...big price to pay to get on the air to make my first contact as a ham.

Anyway, a little grinding and some pencil lead later I had a 7129 KHz crystal...(although I no longer have the Viking II, I still have the crystal...it's sitting just above my FT-1000D.

My receiver consisted of a Radio Shack DX-300. I also had a Hammarlund SP-600 but the DX-300 was lighter and easier to move around. My antenna had already been up for quite some time so didn't have to worry about that.

Being rockbound was no disadvantage to me then. I met and made more friends on that one frequency and still have contact with several of them after all these years. When I really think about it, I can see why so many of us are so passionate about the cw mode but that is a different thread isn't it?

" 'Way, 'way back when" all hams, Novice on up had to sit before an FCC examiner to get any license. The Extra was nothing more than a fancy wall decoration which did not convey any more priveleges than a General did. I had to truck to the FCC office to take my Novice test, no other way to get a license. Unless you were something like 200 miles from an FCC field office or were excused on a medical waiver and obtained a Conditional Class license which was the same as a General. I think if you moved inside the 200 mile circle you had to go to the FCC office and take a General test. The Novice was a one year drop dead nonrenewable license, upgrade or forget it.

All candidates who lived inside something like a 200 mile circle had to sit
before an FCC examiner at one time including Novices.

> It was administered by General and above.

All of 'em were administered by an FCC examiner at an FCC field office except
for the Conditional.

My next question about all this was going to be "how does it effect a
refraction?", but I think I'm beginning to see how the spatial
variablility in electron density leads to refraction and can sort that
one out myself. Tnx.

The Old Old Timers Club is seeking new members for NO charge
for initial fee and membership.
To be eligible, you have to be currently licensed and have
had a radio contact 40 or more years ago. That requirement
can be met by contacts in the military.
For further information, contact me on E-mail or Duncan,
W1GAY (Call good in the book.)

You're assuming that S25.5 is engraved in stone and will be true
for all eternity. Many of us think it will be gone in 2002. So proposals
for times further out than that can discount it as a historical curiousity.

Source record: 158852

Can anyone give me any info on making a simple antenna (from parts I can get at a Radio Shack or hardware store) for an HT. I am interested not in transmitting longer distances, but picking up signals while scanning at longer distances. The trick is I live in an dorm room, so I don't have access to a backyard or trees. Everything would have to mount from my window, or inside my room.

Thanks,
Mike

You'd have to answer your half of that question for yourself. Speaking for myself...if somebody wants to jump my case without bothering to get their facts straight, they should be prepared to be shown for what they are. Or are you suddenly advocating doormat-style tolerance for people lacking a clue? (Judging by past posts, I'm sure there'd be many folks surprised to hear you do so.) Of course, considering that I've stung you similarly in the last couple of days, I can certainly understand your sensitive nerves jangling.

To those who are friendly, I'm friendly. To those who aren't, I give as good as I get, until I get bored enough with them to start filtering. Now run along and pester someone else.

Lemme add my 2 cents to this:

The Great State of California, in common with most other
ststes, including no doubt the State of Tejas, has SIX classes
of driver liecsnes/permits:

Class 1: Any combination of vehicles, including those
permitted by Classes 2 and 3.

Class 2: Bus, single vehicle with three or more axles,
"standalone" or towing another vehicle
weighing less than 6000 pounds gross, and
vehicles permitted by Class 3.

Class 3: Certain farm vehicles operated on the highway,
schoolbus or farm labor bus (with special
endorsement), three-axle motorhome/RV, three
axle vehicle towing another vehicle weighing
less than 6000 pounds gross, and any two-axle
vehicle "standalone" or towing certain types
of loads.

This is the usual "driver license" held by
most of us.

Class 4: Two wheel motorcycle / motor-driven cycle (moped or
scooter) / motorized bicycle. Can be an
endorsement on Class 1, 2, or 3 license after
examination.

Learner's Permit: Requires licensed driver of proper class
to be in vehicle.

Junior Permit: Age 14 - 18, where alternative transportatin
is not avaliable and driving is required for

school attendance, employment, or illness of
family member. Issued on a case-by-case
basis.

As far as "amateur driver license" as you stated above, the
Class 1 and 2 are required for, but not limited to, employed
drivers using the specified vehicles, the Class 3 can be used
for employment as well as for pleasure vehicles, and the
concept of "professional driver" has no meaning - I consder
myself a "professional driver" by training and experience even
though I have a Class 3 license.

Not as simple as we thought, eh??

Not amateur driver Vs professional driver. I was talking about
amateur driver Vs commercial driver. I also specifically limited my
comments to amateur *car* drivers as opposed to any other kind of vehicle.

Good Lord!,

No wonder amateur radio can not move forward, with persons argueing
over events that started 40 years ago. It's done, it's over with grow
up and move along. This isn't dirrcted to Ricard personslly, I replied
to his because it was the last in the thread I seen.

I suspect - shown that it was knowlegeable about ham radio.

>Give us the inside scoop.

I'm not inside any more <ggg>

Remember that enforcement was taken away fromn the Witless
Telegraph Bureau and given to the folks that can and are
willing to do the job right (my old crew).

Rulemaking and policy decisions, unfortunately, were left in
the tender care of the WTB.

I often speculate that if I could have stood the weather in
Washington (I served my two years in the barrel there with
another agency) things may have been different over the years.

2. FLARES AND SHORT-WAVE FADEOUTS
DATE CLASS M FLARE
FLARES MAX
07 Oct 98 M1.6/1N 1247UT
07 Oct 98 M2.3/SF 1712UT
18 Oct 98 M2.4/1N 0145UT

2.1 Comments on Solar Activity.
Solar activity was at mostly low levels throughout the month
of October, with moderate activity only observed on 7 and
18 October. A proton event which began on 30 Sep ended on 02 Oct.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
1 Oct 98: Unsettled to active
2-3 Oct 98: Quiet to unsettled until 0730UT, when a sudden impulse
was observed. The field then reached active to minor storm
levels. Activity declined on 3 Oct with active periods observed
early in UT day then quiet.
6-7 Oct 98: A small sudden impulse was observed near 1630UT on 06 Oct.
Field remained at unsettled levels, until last half of the
UT day on 07 Oct when active to minor storm levels were
observed.
19-20 Oct 98: Minor to major storm storm levels observed on 19 Oct. Field
declined to unsettled to active levels on 20 Oct.
21-22 Oct 98: Active to minor storm periods observed during this interval.

The most significant disturbance for the month was observed during the
interval 19-20 Oct. This activity is believed associated with a large solar
filament that erupted near 1000UT on 15 October. The activity during
the interval 2-3 October is believed to be due to a coronal
mass ejection associated with an M2.8 flare that occured on 30 Sep.
Activity during the interval 06-07 Oct may be associated with a filament
that erupted on 04 Oct, near the centre of the solar disk. Acivity during
the interval 21-22 Oct is believed due to a coronal hole.

==========

4. IONOSPHERIC DISTURBANCES (for Australian Region)
03 Oct 98: depressed 15-30% southern region.
16 Oct 98: depressed 15-20% some southern region sites.
20-21 Oct 98: depressed 15-35% southern region.
22-24 Oct 98: depressed 15 to 40% most sites in region.
26 Oct 98: depressed 15-20% southern region.
29 Oct 98: 15 to 30% most sites in region.

The deepest ionospheric depression this month was observed during
22-23 Oct with most sites in the region depressed by 40%. Southern
region Australia and New Zealand MUFs were lower than normal from 20 Oct
to the end of the month. Darwin MUFs were strongly enhanced during local
night hours 10-12 Oct.

Perhaps I'm disqualifiifed from talking about the "good old days" (I'm less than 60 years old, never had a QSO with HPM, and got my license as one of those newfangled Conditionals.)

But I'm going comment anyhow. (You just KNEW I would, didn't you!)

My "good old days" started in the early 60's, just 35 years ago, but here is what I remember.

.... hams didn't bicker with each other about who was more "deserving" than another. Nobody got a special deal because they could beep faster or remember more electrical formulae than someone else. I got my Extra in 1963, well before disincentive licensing, and it was simply just another personal accomplishment, and did not "elevate" me above other hams. We all shared the same spectrum, worked together to solve the same problems, competed in contests, trouble-shot each others radios, and generally had fun together. If you forgot the numbers for the dipole formula, it was OK to ask someone else. If your Morse speed was 10WPM the speedier guys would slow down for you, not QSY to some specially reserved band segment. The one or two "old timers" on 75 meters who didn't like newcomers ("No lids, no kids, not space cadets") were universally looked down on as poor examples of what a ham ought to act like. The Novice bands were a "cacaphony of exhuberance" to steal a term that K1ZZ used in a meeting yesterday here in Minneapolis. Old hands were on those Novice bands also -- it was not unusual to hear W4KFC or W5ZD patiently working WN4KKN or WV2CNL -- nobody remarked that it was "nice" of them to do that -- it was just part of being a good ham. The notion that you had "earned" your license never occured to anyone -- we were just excitedly "playing in the ether", and there was no distinction on the air between Extra, Advanced, General, or Conditional -- elitist special callsign formats to celebrate the fine granulations of your testing skills had not been invented.

Today we are sliced and diced into 6 different classes, carefully divided into our own special frequency segments, and Lord protect the Extra who suggests that a new Technician, who didn't pass his exam in front of a bored and stern FCC clerk, might have something to contribute to our beloved Amateur Radio service.

I respectfully propose that all current six license classes be scrapped and replaced by two new classes "Beginner", and "Helper of Beginners".

The '1000 MP and the '775 are good rigs, but don't discount the TS-870, which has excellent DSP on Rx and Tx. Plus it has by far the best received and transmitted audio, IMO. I had Icom rigs, including some of the latest ones (the mechanical build quality of Icom rigs has gone down the proverbial "shitter", and I was tired of having to modify the rig to get sufficient drive with a normal microphone), and I gave up an FT-1000D for the '870.

The FT-1000D was a super rig, but the 870 is much more advanced (but you would expect that because the '1000D has been out forever). Plus, I like to play with computer control, and the '870 makes that easy. It has a DB-9 jack in the back. None of those silly "level converters" needed.

But, hey, we could debate this issue all day!

In '75 I started out with a Heathkit DX-60 and HG-10B VFO (I was one of those fancy, non-rock-bound types), and the overly huge Hammarlund HQ-110 receiver. You almost couldn't listen to SSB with that thing, so it did not provide as much incentive to upgrade as some others. Paid $160 for everything including a keying relay. That was actually a lot, especially for a 15-year-old punk.

Anyone remember DREAMING of a Drake transceiver, or even (gasp) the Drake twins? They were the Cadillac of radios back then (Yeah...I say more so than Collins equipment) How about the Heathkit catalog with that picture of a complete SB-104 station? Digital everything, and it looked cool, and you could just imagine going into the guy's shack and smelling the hot tubes......

Remember the company Trigger Electronics? They put out a catalog, took a lot of orders, and then ran away with the money?

Gee, I was licensed in 1966 and the novice band was 7100 to 7150. When did
they change the novice band segments? Must have been prior to 1966.
Had a Golbe Chief Delux running a pair of 807s and a National HRO60 receiver.
Antenna was a Hygain 14AVQ.

The first rig I remember was a Hammerlund HQ140x with an Eico 6meter
and 2meter converter ahead of it. And a WRL Globe High-Bander Xmtr.
This was the "Family Station" . Got the High-Bander as a kit.
It used link coupling to the antenna. Anyone who could tune it
up on 2 without frying it, was a person to be recond with. :-)

Hans,

Very well put. This is the basic problem with amateur radio today. The cast structure imposed upon us by the inept FCC and the ARRL. "Incentive licensing" basically destroyed the comradship of amateur radio. It created a undeserved elitist group within the group. It led to splintering of the members and led to a lack of interest in helping each other out. I was against incentive licensing when it was proposed and Im against it now.

What is the solution? Forget about what class of license someone holds. Work with that newcomer and help him along. Quit bitching about something you cant change and get on with improving the service. Join a club, help with classes, do some show and tell of things you enjoy in the service.

In otherwords, put something back.

Dan/W4NTI extra class (just for your info)

1963: Built and used an Allied Knight-Kit Star Roamer swl receiver.

1965: Licensed as Novice and used a Hallicrafters SX-140 receiver
and Heathkit DX60A transmitter. The pair provided no
CW sidetone, so I employed a Lafayette code practice oscillator
which emit horrid tones when RF got into it (often).

Also used a homebrew 6AQ5 40 meter cw transmitter I built in
a chassis composed of Erector set pieces. Waited 6 months
to get the National XR-50 coil form, on back order from Allied
Radio.

Traded the SX140 in on a Hammarlund HQ170C after a few months.
.... Big improvement!

There never was an office in Reno. The SF District's quarterly
examination points were Fresno (CA) and Salt Lake City (UT),
the latter added in the mid-1970s when responsibility for Utah
was tranferred from the Denver office (District 15) to San
Francisco (District 12).

You are showing your ignorance of the facts.

In the case of the spread-spectrum rules, there was a large
pizzzing contest between TAPR (represented by the Goldberg,
Godless law firm) and the ARRL (represented by Booth, Freret,
Imlay and Tepper) and the ARRL --- LOST!!!

Chris Imlay, the General Cousnel of the ARRL and a good friend
and colleague of mine, would LOVE to deal with an FCC which
"rubber-stamped" things (as would I) because it would make our
lives as communicatons attorneys so much easier. It doesn't
work that way.

PS - little known fact, but the FCC enforcement staff had a
LARGE input into the "limitations"of the spread-spectrum rules
based on availability of monitoring / d-f capability. Remember
that the Amateur service is one of the very few where the FCC
has the legal obligation to monitor content for compliance.

I have no proof of this, of course, but it is most probable
that the above related to the fact that at that time, only
holders of the Class A license (the forerunnert of the Advanced
Class) could operate 75m and 20m phone.

"In those days" hams were expected to be "self policing".

I made a typo above. It was/is * really* WCARS, pronounced
"Wes Cars" but never ever spelled WestCARS.

I typed that name often enough in monitoring reports.

Because the NPRM as it finally came out was a camel designed
by a committee, having been taken out of the hands of the
original highly coherent author who is no longer associated
with that project. The Errata released a few weeks later was
an effort by a competent person to do some damage correction,
but it may have been too far gone at that stage.

Frank DH 0 AAM/W6 sent me this email regarding a "Learners License" in Germany.

73's
Don, W6IQ

Hello everyone in the list,

I like to give a comment on the "learners license" that we have in Germany.
Due to the "new" license agreement from May 1, 1998 which is a big change
after all those years when we started with HAM radio again after world war
II.

So the new license structure is a follows.

Class 1, highest category with CW 12 bpm, all bands equal to CEPT class
1
Class 2, no CW, VHF & UHF equal to CEPT class 2
Class 3, no CW, VHF & UHF, beginners license not equal to CEPT
agreement, just national license

Here it comes "learners license". Any person can apply for a license like
this. The person will get a personal call sign starting with "Delta Oscar".
The "only requirement is that a HAM has to be present at all times when traffic on the bands is done. So the HAM is function is like a sponsor or
mentor. Furthermore the license category of the "learner" is depending on
his/her sponsor. If it is a HAM with a HF all bands license so the "learner" can use all bands ... There are no restrictions what so ever on
the kind of modulation like using CW, AMTOR etc.

The "learner" license is valid for 2 years. This kind of license for "learners" came up after the initiative of the German Amateur Radio Club (DARC) and could be negotiated with the Federal Department for Post and Telecommunication (equivalent to the FCC). Hopefully this chance will bring
some young people and who ever is interested in HAM radio to our hobby

...

If you like to hear more about it please let me know.

1988. IC-740 Problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-02 00:00:00 UTC
From: Jon Johnson <jon.johnson@nashville.com>
Message-ID: <363DF1E8.417E6D7E@nashville.com>
Source record: 158922

I fired up my 740 yesterday after being off the air for quite some time and was greeted with a high-pitched (I estimate about 2000 cycle) tone that pegs the meter on all bands both with and without an antenna attached.

Has anyone else encountered this problem with a 740? Does anyone have any advice on where I should start looking for this problem?

Thanks

-Jon NU4JJ

Has anyone else had a problem programming the TM-V7a? I downloaded the software from Kenwood's FTP site, purchased the PG-4S cable, and visited Radio Shack to get a DB25 to DB9 adapter. When I select Radio/Read, it proceeds to download the freqs, but when complete, it puts the UHF side into transmit!!! The only way to take it out of transmit is to turn off the radio. I'm wondering if my radio is misconfigured, or the RS adapter has the wrong pin outs, or the PG-4S is bad. Thoughts?

For Sale: 2M (50 watt) Linear Amplifier and pre-amp

This amp is just over one year old and is in excellent condition. The current list price for the amp is $119.95 at AES (which is where I bought it). I am willing to sell the amp for $80 or best reasonable offer. I got my amateur radio license a while back (KC8IHY) and have just gotten out of the hobby for one reason or another. Please let me know if you have any questions or are interested. I'd be more than happy to answer any questions you may have. Please feel free to e-mail me at: mnicolia@greenapple.com

Model: MH-A103 (Maha)

This amp is designed for use with any VHF band handheld or mobile transeiver with an RF output power rating of 2.5 to 5 watts to increase it's output to a nominal 50 watts and has a built-in GaAs FET receiver pre-amp.

Features
----
* 50 watt output with 2.5-5 watt input
* Low noise pre-amp
* Dual Mode (FM & SSB)
* SWR protection circuit
* Reverse DC power polarity protection

Specs

Frequency range: 144-148 MHz
Modes: SSB/FM
Input: 2.5-5 watts
Output: 50 watts
Receiver gain: 18 dB
Impedance: 50 Ohms
Connectors: Type M (SO-238)
DC Input: 13.8 Volts
Current Drain: 8 Amps (max)
Dimensions: 5.3" (W) x 1.7" (H) x 6.3" (D)
Weight: 2 lbs

There is more information about this product at:

http://www.maha-comm.com/products/poweramps/mh-a103.htm

Please contact me if interested (mnicolia@greenapple.com).

Why can't the 25 contacts be worked "off the air"? Let them practice
with software or a code practice setup rather than cluttering the air
with 2 WPM contacts. It takes a lot of patience to sit through a 2 or 3
WPM QSO, I doubt many hams would want to bother. It also takes time
before one develops a "readable" fist too.

I just recently got my Novice and worked my speed up to 10 WPM for the
test using software and also listening to W1AW code broadcasts and other
hams. I also bought a CPO and practiced sending as well as receiving,
so that I had a passable fist before I ever went on the air.

Just a thought.

Very nice post. I was licensed in 1960 at age 11 with an "N" in the call and concur with many of the things you said. Everyone was helpful in those days with the exception of the "no lids...etc" idiot W2OY. If you needed help, you got it. If you had help to give, it would be taken in the spirit and thanks came your way. You were willing to help because you realized that it was that same kind of help that got you as far as you were. You had a year to upgrade from the Novice class and heck, if you had your ticket for more than 25 years, you could be an automatic (grandfathered) extra! Wouldn't that light some fires today.We studied for the General and believe it or not, didn't bellyache over the code. We did it because it was part of the exam and never once thought it was too hard and should be done away with. I guess we weren't looking for the "easy way out." We had antenna parties, club ragchews and all this without repeaters. We had a local tv radio store owner that stayed open on Saturday afternoons just in case some guys needed parts and supplies. Today, the "demographics" would tell him to close on Saturdays. A group would gather in his store on Sat mornings just to ragchew. We had "SOS at Midnight" that we read and re-read as K6ATX emerged as the technological Hardy Boys. I always heard the guys talk about "the way it used to be" and I knew that my time would come. My first phone contact as a General brought on an onslaught of callers thinking I was a yl in that my voice had not changed yet. Today, a few "kalifornia kilowatts" would be fighting over who would take the list to talk to me while a few others would constantly tell the group that "he's listening up!" We gave our call letters and didn't add to it "....for id" because somewhere along the line, we had figured out call letters were for id anyway.We had names or handles and personals were still something in the classified section of the news. I am certainly glad we had the "good old days" and I think the newcomers of today will be hard-pressed to say the same about the present. As I sat with my Globe Chief that I had built and my little National NC-60 with a 75 meter band that was all of 1/4 long, I didn't realize how good I had it. My Elmer heros were W3ESV and W3QDJ that helped and explained and not the "hero element" of today which seems to be the guy that passes out petitions to do away with the code exam. They say the only thing constant in this world is change but the changes that I see in ham radio, have seldom meant improvement. 73 de Ron K3LUE (I guess that de (-.. .) thing is a little out of date but it will stay there, nevertheless.

You weren't listening, Steve, so I'll say it again:

Just a reminder - in 1959, the FCC published a Notice of Inquiry asking what incentives could be tacked on to the Extra Class license. They received thousands of comments. We periodically read of folks criticizing the ARRL for "...hurting amateur radio with their incentive scheme..." but it was really the FCC itself that planted the idea in the first place.

The company you are looking for is "Shack Attack" and they advertise in Worldradio magazine primarily. The Callsign of the owner is a KB7, but don't remember it entirely. I have one of their callsign plaques/license holders and it is very nice.

Sorry I don't have more than that - no WR's in the shack due to spring cleaning. The Shack Attack website is defunct. Hope someone else can help you with the address and the 800 number.

Why not make an amateur radio license like an amateur driver's license?
One size fits all. People are either allowed to drive a car or not.

Prediction: Although it is not politically possible to reduce the
classes of license to less than three at this time, I predict that down
the road 20 or 30 years there will be only *one* class of ham license.
The test if any will be very easy, probably at the level of a drivers
license test. And the result will not be more civility, but less.

How can you say with absolute certainty the "test" (is it
code or theory written?) fails to demonstrate a person's
knowledge? I agree there are many areas that could / should
be strengthened. However, given what the FCC has said we
can and must do, plus the constraints governing that, we've
been doing the best we can -- which could be better.

Nothing's perfect; you work the best you can with what have
available at the moment

BUT ... IF one is really serious about this approach, I
think the question of how "contact demonstration -
verification" can be accomplished, particularly for those
who are as yet unlicensed, needs to be worked out a little
more solidly.

Obviously, given the fact there already IS a no-code entry
license, then it is easy to say that all this demonstration
and verification can be carried out on VHF and above. But
obtaining that no-code entry license is an extra hoop, is it
not?

That said, I strongly feel the mechanics of the entire
license structure need to be simplified. Adding more
mechanics and hoops, i.e., a code "contact demonstration and
verification" system, is not the way to go. The best way to
go is to reduce the code speed / class requirement, at a
minimum, and ideally, remove the code test altogether.

There really is no reason to demonstrate a physical skill
that has nothing to do with RF theory and practice;
otherwise, we should be testing for knob-turning,
antenna-slinging and switch-throwing skills as well, yes?

My first station consisted of a Hallicrafters HT-40 transmitter. This was a kit radio, "new" cost I think was $89.00, but I bought it from an estate auction for $15.00. Ran about 45W.

My receiver was a Hallicrafters S38D which I bought used for $30.00.

Most expensive equipment in the shack was a surplus LM-21 freq meter which cost me $40.00.

Total cost of station equipment was $85.00, and it was a pretty capable station for those days (early 60's).

My first new store-bought rig was a Swan-350 which I bought on credit from Allied Radio for $325.00 in 1968.

Peter, I have been using my Gap Titan DX for over a year now. You may recall hearing about the storm we received in Western Michigan this Spring with estimated wind gusts of up to 130 MPH. I awoke to find my Titan DX bent over about 50 degrees and binding on a piece of PVC that holds an element. A slight movement released the pressure and back up it sprang. I haven't done a thing to it since. I've gotten great signal reports and find this to be a very servicable antenna. High marks from me.
Cheers, Dan ab8cd

Just as we have learners permits for drivers licenses, there should be a
"learner permit" for amateur radio.

We need two classes.

Because of the ITU Radio Regulations which require Morse Code
proficiency for the use of amateur radio frequencies below 30MHz,
that plan would immediately remove all licensing from the present
holders of Technician Class tickets. And I would guess it would also
cause a large number job losses at those firms which are making money
from the manufacture and sales of VHF and UHF gear.

Don't you find that an excessively high price to pay merely for
licensing simplicity?

Well good. It may take me a little longer, but I'm still working on it.
Actually, I'm up to about 9-10 WPM right now. I've been putting in 1-2 hours
every day on code practice.
Funny thing is...and you didn't bother to ask, you just jumped right
in...I'm planning to upgrade AT LEAST to General, and preferably all the way to
Extra if I can make it there. But of course, asking that wouldn't have
permitted you the opportunity for a few smug remarks.

Must be a full moon...anybody ELSE feel the need to have their foolishness
publicly ridiculed? It certainly appears to be the day for it...

Dspman@aol.com wrote:

> took me about thirty days....

Good God, I've only been working on this for a month! How long did it take
YOU to pass 13 WPM? Or 5, for that matter?

Dspman@aol.com wrote:

> try passing 13wpm. then you will be a ham!

Really? Since WHEN is a Tech Plus a no-code license? I've got the CSCE to
prove I passed it.

Dspman wrote:

> no matter how you look at it, you are still a wannabe. no coder!!!!

Geez, you'd think if they could post, they could read...

By the time I got my Novice it was by mail only. That was 1963.

The distance requirement for Conditional varied over time. At some point it
was 75 air miles, but it lengthened out later to 125 or 150 miles, I don't remember
which. Some FCC offices only gave exams quarterly, others gave them once a
month or once a week. There was a table in the back of the license manual telling
you which did what, but calling ahead to make sure the manual wasn't out of date
was advisable.

I don't recall that you had to retake the exams if you moved inside the limit,
but a Conditional was subject to retesting by the FCC at any time if the FCC
so decided. If you upgraded, as I did to Advanced, you had to retest on everything.
The Conditional conveyed no exam credit for the higher classes. (Eventually,
Conditionals were all upgraded to General, and then they did count for exam
credit, but that was later, about the time the VE program started I think.)

Subject: PCH Closing

All,

I am posting this on uk-vintage because there must be a number
of you who have worked with PCH on regular basis in the past.

73's

Jan

October 1998

Dr OM/YL/XYL
The Dutch Landstation for the Maritime Mobile Service
"Scheveningenradio/PCH", founded 19 december 1904 is going to
close service 31 december 1998 15.00 UTC. At this moment of
sadness to the personel they don't think of contacts with
others, but at the anniversary day december 19th they will
give a FAREWELL PARTY on the air. The Dutch gouvernment agreed
to use the coaststation frequencies to make contact with
radioamateurs in their bands primarily for (ex-)Radio Officers
to say good bye. Cross Band as usual on HF Maritime Mobile
Service! But any licensed station is invited to join the party
and make a QSO on one of the last days of PCH: The schedule
is: 19-12 17.00 UTC - 20-12 07.00 UTC CW on one the following
frequencies depending propagation conditions with the callsign
of Scheveningenradio: PCH . .: 4250 kHz PCH20�� -�� 3525 kHz
+/- QRM 8622 kHz PCH41�� -�� 7025 kHz 12799,5 kHz PCH51 -�
14050 kHz 17198,9 kHz PCH61 -� 18085 kHz

19-12 08.00 UTC - 20-12 08.00 UTC there are also stations on
air with callsign PA6PCH: SSB on 144,315 MHz SSB on 3670 kHz
and on the HF-bands the clubstation of the Radio Club
Kennemerland PI4RCK is also on air with the PCH call (PA6PCH).
For every station making QSO with one of the FAREWELL PARTY
stations there is one special QSL card but it is not a CONTEST

Regards and cuagn 19-12

All at PCH & PI4RCK

Here`s the original>
Dear radio enthousiasts,

For 94 years Scheveningen Radio (call sign PCH) has operated the dutch radio service for matitime radio stations al over the world. With its roots in the earliest days of wireless communication it is one of the longest established maritime radio services in the world.

Sadly, as communicationstechnology has moved on over the last century, so have the needs of users. So, from january 1st 1999 the station is closing down permanently.

As a last event and especially for radio amateurs the world over, Scheveningen Radio PCH will be holding a radio amateur 'farewell day' on its 94th anniversary.

>From 08.00 UTC on december 19th 1998 until 08.00 UTC on 20th
>december 1998,
w're inviting radio amateurs to contact the station on several bands (frequencies shown below). All these bands will be monitored by our radio operators throughout the day.

2 metre band
Time - 0800 UTC 19/12/98 until 08.00 UTC 20/12/98
Callsign - PA6PCH Frequency - 144,315 MHz Mode - Voice SSB

80 metre band
Callsign - PA6PCH Frequency - 3690 kHz Mode voice LSB

Shortwave telegraphy
Frequencies: PCH TX PCH RX
pch20 (4250 kHz) 3525 kHz (+/- QRM)
pch41 (8622 kHz) 7025 kHz
pch51 (12799,5 kHz) 14050 kHz
pch61 (17198,9 kHz) 18085 kHz
There wil be four different CQ calls on channels not in use, indicating the channel currently in use CQ de PCH41/51/61 Farewel Radio Amateur Day call 3525 listen on 4250 kHz CQ de PCH20/51/61 Farewel Radio Amateur Day call 7025 listen on 8622 kHz CQ de PCH20/41/61 Farewel Radio Amateur Day call 14050 listen 12799,5 kHz CQ de PCH20/41/51 Farewel Radio Amateur Day call 18085 listen 17198,9 kHz

Time - 1500 UTC 19/12/98 uintil 0700 UTC 20/12/98
Mode - CW
Callsign - PCH

The farewell day has been specially approved by the Dutch Radio-communications Agency. Radio amateurs outside The Netherlands should check the conditions under which their license has been granted. In some countries this cross band

operation could be prohibited

It'll be a day to combine both sadness and fun. We look forward fo hearing from you

Best regards, All at Scheveningen Radio/PCH

Just a reminder - in 1959, the FCC published a Notice of Inquiry asking what incentives could be tacked on to the Extra Class license. They received thousands of comments. We periodically read of folks criticizing the ARRL for "...hurting amateur radio with their incentive scheme..." but it was really the FCC itself that planted the idea in the first place.

What a test is supposed to do is demonstrate a persons knowledge. The test we use today fails to do this. If a person makes 25 verified cw contacts....(in my opinion) he has proven he can operate CW. It's not too difficult to verify these contacts....

Sorry Don, as others have noted also, especially
with reference to actual documentation from an ARRL
1954 License Manaual...to wit...the Novice and
Tech was ONLY administered by mail as of 1954
or some time before that.

Cheers again,
Bill K2UNK

Don:

I agree wholeheartedly, with a few conditions:

Each "QSO" must consist of the accurate transmission and reception
of call sign, name, QTH, and a true signal report (not a standard 599,
unless it actually *is* 599). Each QSO must be completed in no more
than 10 minutes time, to ensure that they all wern't being conducted
at .25 WPM. There must be a qualified and certified "judge" on
both ends, who must be non-hams who know the Morse code but
have no interest in amateur radio per se, except for earning their
fee for serving as a witness to the 25 QSO's. The allowable fee
would be at least $10.00 per hour, per session. If additional
information beyond the basic information was accurately sent and
received, then the "judge" could grant the person credit for one-
tenth of a QSO for each additional point of information accurately
transmitted and copied. For example, if the two stations exchange
weather reports in NWS format, exchange info re: their occupation,
other hobbies and interests, etc. The station being tested would
get a 2 QSO credit for checking into a CW traffic net, and another
2 QSO credit for properly sending or receiving one piece of NTS
message traffic. Finally, all QSO's submitted for proof of CW
qualification must also be verified from at least one other independent
monitoring source, which can be a licensed amateur, but must not
reside in the same state as the amateur being tested, and must
not be related to the testee in any manner.

Of course, you could do it the hard way and just take the damn
code test from your local and usually corrupt Volunteer Examiner!

Way back in June of 1961 I managed to pass the Novice exam. My first radio consisted of a Knight-kit R-100A receiver and a T-50 transmitter. Of course being required to use Xtal control I decided to be safe I'd select the middle of the Novice band....7175. I soon discovered that probably 50K other new novices did the same. My antenna consisted of a 40 meter folded dipole, made from TV twinlead. It said in the book it must be a "flat antenna". So I looked out the upstairs window and it looked "flat" to me. Later on I found out that was not what the book meant.

Hello. I have an Alinco dj-190, I use the 4 AA battery pack. I can't get more than a few minutes TX time on brand new batteries. I was hoping that someone could tell me what I need to do to turn down the power output. I only need 300mw or so, not the 1.5 that its trying to suck out of these AA's. Thanks a lot for any help.

Well Bill...Yes in the 1950's you are correct. In 1980 this was not the case. If a person lived a distance somewhere between 75 to 200 miles (No one seems to agree on this hi hi) from the FCC a Ham could administer a Tech test. I lived about 35 miles from an FCC office and I was required to take the test at the FCC office. In the San Francisco Area we had an office in San Francisco and Reno(I think...memory is going) Not to mention Southern California. So I don't know of anyone who took a Technician test by mail. I have met some who had the Conditional license.

That was WestCARS - I used it weekly back in the 70s (when I was
WA6QIJ) - I was stationed at the Monterey Coast Guard Station -
they'd get me phone patches to my mom in LA.

There was also an EastCARS in operation at that time.

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with Subjects like _"Amateur Radio: Elmers Resource Directory Part */* [*-*]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news

sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part1
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part2
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/list/part6
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few
nodes, And, I have successfully installed UUPC/extended 1.11k and
SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95
networking information available.

Webmaster, Franklin County (Alabama) Amateur Radio Club:

http://www.qsl.net/fcarc/

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

QEX Editor

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which

is great fun. I have put together PC's and help other people with
Linux issues. On packet, I run TCP/IP using LNET which is
WAMPES-adapted for the UK by Darryl, G7LED.

Fred O. Maia W5YI

fmaia@internetmci.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

Steve Mann N1NLF

mann@eecg.toronto.edu

http://n1nlf-1.eecg.toronto.edu/

Toronto, Ontario
CANADA

Wearable Computing and Personal Imaging:

http://wearcomp.org/research.html
http://wearcomp.org/wearpubs.html

[_Editor's Note:_ Steve is a graduate of the MIT Media Laboratory and is currently a member of the faculty at the University of Toronto. He has done a considerable amount of research into, and implementation of, wearable, wireless networked computer systems using amateur radio (via a 56kBaud GRAPES radio modem) as the physical layer. He is arguably a pioneer in "Wearable Computing." You may have read about him in the April 1996 issue of Scientific American in an article called Smart Clothes, CQ-VHF, the February 1997 issue of IEEE Computer, or seen him on the October 1996 episode of Scientific American Frontiers on PBS called _Inventing the Future_. He is interested in connecting with other serious amateur hobbyists pursuing like or similar technologies. See his World-Wide Web Pages above for

more information.]

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips
* Frequently-Asked Questions (FAQ) and answers from the Homing In mailbox
* Index and subject list of all Homing In columns in 73 Magazine through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is not affiliated with 73 Magazine, Wayne Green Enterprises, or any other commercial entity.

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

Jes, mi parolas la Internacian Lingvon, Esperanto.
Yes, I speak the International Language, Esperanto.

Esperanto, the International Language, is spoken by 600,000 to 2,000,000 people in over 110 countries.

Over 75 countries have national Esperanto organizations, including third-world countries like the USA.

In Europe there is a very active Esperanto Ham Radio association known as ILERA - Internacia Ligo por Esperanto-Radioamatoroj (International League for Esperanto Radio Amateurs).

For more information concerning Esperanto, contact ELNA (Esperanto League for North America) at +1 (800) ESPERANTO (377-3726) or send E-mail to elna@netcom.com. (The ELNA membership list also lists member ham calls and E-mail addresses.)

If you wish a ham Esperantist for a penpal, contact me at one of my addresses above.

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

* Amateur Radio Ideas Page
* ACT Sustainable Transport Working Group Home Page
* Australian QRP Home Page
* Peter Parker's Projects Page

Following feedback from readers, I'm pleased to announce further improvements to my World-Wide Web Page.

The main change is the use of .gif images for the schematics and other diagrams instead of .bmp files. This dramatically reduces the size of the files (10k vs 141k). Also, it is now possible to view the schematics online.

Recently added is information on a simple 2m antenna for portable use. Information on other projects will be added as time permits.

You can get to these pages via the URL above.

+1 (937) 256-4355

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net

aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

+
+ Packet Radio Networking World-Wide Web Page:
+
```

+ http://www.packetradio.com/
+ http://www.packetradio.org/
+ http://www.sedan.org/
+
+ To open the pages, a Packet Radio Glossary that I began writing in
+ 1988, and updated as new mnemonics and acronyms were added to the
+ Packet jargon, is at:
+
+ http://www.packetradio.com/glossary.htm
+
+ Next there is the "original" Packet Radio Primer for the Novice or
+ beginning Packet Radio operator at:
+
+ http://www.packetradio.com/primer.htm
+
+ Since 1996, the TNC to Transceiver diagrams from these pages are the
+ most used and imitated on the WWW. I maintain these drawings directly
+ from the Original Equipment Manufacturers (OEM's) and insure they are
+ of the latest makes and models. These interface diagrams are at:
+
+ http://www.packetradio.com/tnc2rad.htm
+
+ These interface drawings are taken from over 14 years of the PACKET
+ USERS NOTEBOOK column in CQ Magazine. In addition, I've included many
+ TNC and transceiver 9600 baud modifications at:
+
+ http://www.packetradio.com/9600mods.htm
+
+ I've included several zip files of the latest X-1J4 Rev C code and
+ Packet Radio terminal programs. This site contains information and
+ instructions that enable the reader and user to build and configure a
+ Packet Radio network. Complete with the TNC changes and MODS plus both
+ user level and backbone node parameter suggestions, at:
+
+ http://www.packetradio.com/network.htm
+
+ The parameters and mode guidelines are at:
+
+ http://www.packetradio.com/x1j4pram.htm
+
+ To round out these pages to be the most helpful to all Amateurs, there
+ are pages that describe "How to...":
+
+ * Design and build antennas, complete with drawings and formulas
+ * Build a superb ground system for your QTH, node/repeater, or comm
+ site
+ * Build a solar powered site where no utility mains are present
+ * A coaxial cable table for the most used Coax by Amateurs
+ * WX Watch and SKYWARN links
+ * A Packet Radio bandplan

```
+ * An online callbook lookup link
+ * Hamfest Calendar
+ * Network maps of the 11 State SEDAN emergency comm network
+
+ and much, much more.
```

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put

up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

I have extensive experience in ELF, VLF, and RF non-ionizing radiation tests from the Hebrew University Environmental/Occupational Department at Ein Kerem Hadassah Medical School, Jerusalem Israel. I have just returned to the USA after 13 years in the field in Israel. My tests have involved Overhead Power lines, Antenna Systems, Cellular phone, CRT's, etc. I had been on staff at the Medical School for several years, working very closely with Dr. Milton Gordon (4X1AA, SK) and Dr. Elhud Richter. My reports were used to make the environment a safer place for children and adults alike.

Assistant EC for Josephine County (Oregon) ARES/RACES

I am involved in commercial RF and wireless design, and willing to share experience with other amateurs. I have a complete test equipment facility for checking radios, antennas, etc.

Local NEWSLINE outlet: Program airs on the 147.30 repeater right after the Monday night net.

I am active on HF, VHF and UHF, including voice and digital modes, and
will help in whatever areas I can for most of Southern Oregon.

Dan Henderson N1ND

dbhenders@worldnet.att.net

+1 (704) 684-6339

P.O. Box 188
Skyland, NC 28776

USA

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's
certified by WCARS VEC. I have served for several years as a
proofreader for the NCVEC Question Pool Committee. I work closely with
the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic
handling from almost day one, having earned my first BPL at age 16 as
a novice. I have served as Assistant EC, County EC and currently serve
as District Emergency Coordinator for ARES/RACES and District Radio
Officer for Emergency Management Area F of North Carolina. I also
coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as
an officer of the local club, the Western Carolina Amateur Radio
Society. I designed our homepage, am quartermaster of club equipment,
and carry the keys to the club repeater. I frequently teach both
theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI
committee, hold WAS Awards both as a Novice CW operator and SSB Extra
Class, a DXCC with 86 of them worked as a Novice. I am also the
National Board Chairman of the Geratol Net, a WAS net which meets
nightly from October thru April. I also am chairman of the local
club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF
antennas and am frequently a new licensees first contact. (A debt I am
repaying to my three trusty Elmers of so many years ago, two of whom
are now silent keys)

I would be willing to help in these general areas on-line or close-by
on the phone or in person. (I am a college professor by trade)

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I would like to help any new or prospecting hams in any way that I can. My personal experience is limited, but I am net control of a local Elmer Net here in Pittsburgh. This net meets every Saturday evening at 9:00 PM local time on one of the repeaters of the North Hills Amateur Radio Club (146.88- MHz). This net is intended to help all new hams. Many experienced hams also check in and can answer questions and share their wisdom with beginners.

I am an Extra class operator. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.qsl.net/tcarc-ntx/

and am the President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can
access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the BODY of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through

publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club primarily set up for American Servicemen and Women in the Eifel Region of Germany. We provide ARRL VEC test sessions and help individuals, regardless of nationality, gain a U.S. license. This is accomplished by providing study materials and teaching. We also provide assistance in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites, and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

During the school year, I am in Baltimore trying to set up a college
ARC at University of Maryland, Baltimore County. During the winter and
summer, I am in New Jersey. I am active in ARES/RACES/NTS and local
clubs in both areas, and would be glad to help other young people get
into the hobby of Amateur Radio, particularly in the interests of
Public Service and Disaster Management.

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

I've been an active Linux advocate since it first appeared on the Internet. I was looking for an operating system that would better meet the needs of my interest in Amateur Radio and provide me with an environment in which I could actively experiment and develop. Linux provides that and I've been promoting its use within Amateur Radio ever since.

I'm an early contributing member of the Linux Documentation Project, and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or

prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many
years in broadcast engineering.

I have been a radio amateur since 1954, first licensed as KN2HYZ in
Peekskill, New York at the age of 14. I have been active in periods
ever since, never losing the ham spirit.

I would like to be involved in helping young people start in ham
radio. Especially those who are already licensed and are "lost"
looking for ways to operate or set up a station.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds@nc3a.nato.int
Voice: +31 70-314-2409 FAX: +31 70-314-2176
Senior Scientist, Radio Branch, Communications Division
NATO C3 Agency, P.O. Box 174, 2501CD The Hague
THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I build the only coaxial antenna I have seen for amateur radio. I experiment with antennas from 80m to 440MHz. I am a retired 2-way radio senior technician with 25 years of service with Motorola C&E repairing, installing, and testing, of commercial 2-way radio equipment including pagers, portables, mobiles, base and control stations, repeaters, CCTV, communications consoles, remote control equipment, microwave and multiplex. I am familiar with the test equipment required to perform these duties. I write technical articles for our club newsletter. I am competent with both tube and transistor circuitry. I hold or have held an Extra Class Amateur Radio License, a First Class Commercial Radiotelephone License, a General Class Commercial Radiotelephone License, a California State Contractors License Class C63 (Communications), and two CET Certificates.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

k4abt@packetradio.com
buck4abt@inmind.com

Packet Radio Networking World-Wide Web Page:

http://www.packetradio.com/
http://www.packetradio.org/
http://www.sedan.org/

To open the pages, a Packet Radio Glossary that I began writing in
1988, and updated as new mnemonics and acronyms were added to the
Packet jargon, is at:

http://www.packetradio.com/glossary.htm

Next there is the "original" Packet Radio Primer for the Novice or beginning Packet Radio operator at:

http://www.packetradio.com/primer.htm

Since 1996, the TNC to Transceiver diagrams from these pages are the most used and imitated on the WWW. I maintain these drawings directly from the Original Equipment Manufacturers (OEM's) and insure they are of the latest makes and models. These interface diagrams are at:

http://www.packetradio.com/tnc2rad.htm

These interface drawings are taken from over 14 years of the PACKET USERS NOTEBOOK column in CQ Magazine. In addition, I've included many TNC and transceiver 9600 baud modifications at:

http://www.packetradio.com/9600mods.htm

I've included several zip files of the latest X-1J4 Rev C code and Packet Radio terminal programs. This site contains information and instructions that enable the reader and user to build and configure a Packet Radio network. Complete with the TNC changes and MODS plus both user level and backbone node parameter suggestions, at:

http://www.packetradio.com/network.htm

The parameters and mode guidelines are at:

http://www.packetradio.com/x1j4pram.htm

To round out these pages to be the most helpful to all Amateurs, there are pages that describe "How to...":

* Design and build antennas, complete with drawings and formulas
* Build a superb ground system for your QTH, node/repeater, or comm site
* Build a solar powered site where no utility mains are present
* A coaxial cable table for the most used Coax by Amateurs
* WX Watch and SKYWARN links
* A Packet Radio bandplan
* An online callbook lookup link
* Hamfest Calendar
* Network maps of the 11 State SEDAN emergency comm network

and much, much more.

* Volunteer Examiner (Laurel and W5YI VEC)

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for describing complex subjects in ways that make them far easier for laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

ARRL Technical Specialist

I am a pilot (N6141F) with more than 10 years as air and ground search and rescue. Active in ARES, RACES, and Civil Air Patrol (CAP West 41).

I also have a home in Alpine, Texas, USA.

I have started doing a weekend or four-night amateur radio licensing class that works great. I use the ARRL video course and it works super. We watch the tapes, answer questions and then spend a three-hour session giving them practice Novice and Technician tests, then reviewing each question they missed. We have even had students that had studied at home and just did the last session for review.

I now do four or six classes a year, some in Texas and some in New Mexico.

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or

PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w#xxx and w#xxx-cis. Mail sent to w#xxx would go to your Internet address, and mail sent to w#xxx-cis would go to CompuServe. MCImail accounts have the form w#xxx-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed.
Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing
list maintenance. You may address membership requests to
martha@amsat.org, or send them by mail, phone, or fax to AMSAT
headquarters:

We periodically read of folks criticizing
> the ARRL for "...hurting amateur radio with their incentive scheme..."
> but it was really the FCC itself that planted the idea in the first
> place.
>
> Jeff KH2PZ / KH6
Thats for sure. Incentive licensing was all the fcc's idea. The arrl
just made proposals much like recently. In fact the fcc told them either
you do it or we will according to a friend of mine that was a ham back
then. MK

I don't suppose that CB radio was around in 1948. If it were, the ham would
have said, "Hey, you inbred CBer, get off of my twenty meters." Today we
have the nocoders to blame for everything, or that new breed of radio
enthusiast, the No Code CBer. I don't really know what that is, but I've
been reading alot about him here lately.

I wonder who planted the idea at the FCC? Maybe the ARRL? Hmmmmmm?

Why do you think the FCC's latest NPRM reads like a bunch of incoherent babble? Cause the ARRL got to the FCC before they got their NPRM published/released? The FCC tried to take what they had and make it look like the ARRL plan. Didn't work too well.

Knowing how the FCC works, your statement is kind of humorous.

The FCC endorses the ARRL proposals. The ARRL showed them
that incentive licensing was the way to go, and the FCC rubber stamped
it. The same with the Spread Spectrum rules. The ARRL wrote them,
the FCC rubber stamped them, it is now law.

The ARRL is writing new rules for 5 wpm General (seeing how they are
dying off faster than people are upgrading) and the FCC will rubber stamp
that as well. The ARS is not that important a service for the FCC to
staff and spend real money on.

If Joe Blow petitions the FCC, his proposal is stamped "premature." If the
ARRL send in the same proposal, it is made the law. It's not that the ARRL
is any better/smarter than Joe Blow, it's just a way of doing business
cheaply.

To say otherwise is just ignoring the facts.

If you think that's bad, try my TRS-80, Model 1, Level 2 with a
homebuilt
300 baud modem. Actually, I don't use it anymore. Just hate to throw
something out that gave so many hours of fascination so long ago. Or
should
I have said "frustration ?".

Re: What ham radio is today. It is exactly just what YOU make it.
I have been an active ham since 1964. Still active and enjoying it.

Au contraire. Thus far, my new license has allowed me to meet no fewer
than a dozen hams online who have the grace, tact and friendliness required
to welcome a new member to their hobby (and even to answer a few questions
through EMail). Present company excepted, of course.

2051. Masting and Bending

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-02 00:00:00 UTC
From: wdmilner.ns@auracom.com
Message-ID: <363d04b1.5777066@news.auracom.com>
Source record: 158998

I wonder if anyone would venture an opinion on the following
situation:

The antenna mast is 12' -2" steel mast (supposedly masting but I
suspect it is actually schedule 40/80 pipe).

At the top of mast: Diamond x50 VHF/UHF GP
Down 2' from the top: Cushcraft 147-22 VHF beam (2x11el bayed)
1' above tower: Cushcraft A4S w/40m add on

Total wind load for the antennas is approximately 10 sq ft plus the
masting.

I recently put up a new tower. The rotor mounting in this one is much
closer to the top than it was in the previous one. The old tower had a
little over 3 feet between the rotor and the bearing. This one has
about 2 feet.

My question is whether the mast is likely to bend under heavy wind
conditions. It didn't before with a similar spacing of 2m and hf
beams, but then again it had a wider seperation of support points
between rotor and bearing.

I'd appreciate any opinions/experiences/comments anyone would care to
contribute.

It is unfair to blame it on the FCC and the ARRL. The same problems that exist these days in Amateur radio, exist in society in general. Amateur radio is just a reflection of the world around us.

Unless of course, you would care to lay the blame for road rage, abortion
clinic bombings, postal shootings and so forth on the ARRL and the FCC also.

Sounds good to me, about how it was when I got into this. (1961). We had
the novice, tech, General. No Advanced, unless you already held one. Extra
was only for the wallpaper, gave no other privledges. Sure why not go back
to class A,B: A= All HF/VHF 1.5KW.
B= All HF/VHF 200w.

CW by endorsement only. If you want to do it then qualify and get your
ticket indorsed for it. If not, stay on phone. No special band segements,
no idiotic class structure. Simple and clean. It will never fly, too
simple for the beaurocrats in FCC and ARRL.

Good point....reference my previous post on A/B licenses:
Get your Class B, operate for a minimum of 1 year, a maximum of 2. Then
either upgrade to class A or hit the road.

1964 - Wireless Set # 19 when I lived in Richmondhill Ontario. Great fun with that old rig. I now have 3 of them, and operate as VE1NU in Dieppe, New Brunswick. Each year I put one of them on the air on Nov 11th. I issua a colour certificate and QSL card for those brave enough to have a CW 2-way contact with me.

After the 19 set, I obtained a DX-40, and a Heathkit Commancee Rcvr. Upgraded to a Heathkit HW-100 and used it for many years. Now I use an ICOM IC-730.

Right now, I am going back to 10 meters. It is real good this morning and has always been my favorite band (when it's in).

Back in the early 70's I put up a 40 meter dipole, fed directly with a piece of RG-8/U. All of about 20-25 feet in the air, and clearing the roof by as little as 5 feet in places. As a Novice running 70 Watts I noticed that I could line up almost ALL of my contacts with a ruler straight up and down the state of California.

Perhaps not that effective, but simple, cheap and provided hours of enteratinment and excitement working other Novices.

Hrmmm, checks parity errors in memory...

That would be 1967. My dad and I made the trip down to Henry Radio
When they were alongside the freeway and you had to drive through a
pretty "interesting" neighborhood to get to thier parking lot.

After checking out the used equipment on the shelves, we bought a
Hammarlund HQ-110 receiver, a Heathkit DX-20 and a new 4-BTV trapped
vertical antenna. I sat and stared at my equipment for a couple of
months. Scared to death to actually get on the air and operate.

After getting the "word" from my dad, "Either make a contact or it
all goes back to the store..." I finally screwed up the courage to make
my first contact. That was it. I was hooked. I spent many an evening
working fellow novices on 40 meters in the southwest United States.

I met someone on the air that ended up being my Elmer for the next 10
years or so. Helping me to get my General and Advanced class license and
helping me get started with a carreer in electronics.

A tip-o-the-hat to Roland Peebles for getting me started with a Novice
license and to Dave Mills for helping me to upgrade.

After 30 years on the air, I gathered up another HQ-110, DX-20 and
BC-453
and made it a point to work someone on Straight Key Night last year. And
a nod to W6FU for the QSO New Years Eve.

Sometime back in the early 70's I got involved with RTTY. And in the
early
80's get sucked into Packet radio. Shortly afterwards the "net". I still
get on the air, and make it a point to help those who ask. Part of
returning
the help I received when I was getting started and along the way.

I have been here in the US for a bit more than a year, and I have been using my danish callsign, of course with a W6- infront.
My danish licence is equal to a extra class, except we are only allowed to run 1000w (but on all bands), and my question is now

If I want to have a US callsign, do I have to pass first Technician class exam and then General, or can I take the General written test immediately, and of course the code test ?. What would happen if I fail ?, could they deny me operating with my danish callsign ?.
I bought the study manuals for technician, general and advanced class, but I am supprised that it's only all the questions and answers that are shown. What book should I buy if I want more information ?, I'm not thinking of the theory behind the electronic circuits, but more like all the FCC regulations, safety regulations etc. Would it be a book like The Arrl Handbook ?

"Larry" <larya@home.com> wrote:

> I would like to know what you started out with...

I started out by joining my three local Amateur Radio Clubs, and seeking advice from those in my area performing the same communications that i desired to perform.

And, after much study of what -I- needed to accomplish, I purchased a Standard C-288a 220MHz HT and related accessories.

I subscribed to a private repeater that met all my local Amateur Radio requirements. And out here on the West Coast we have The 220 mHZ Condor System - a linked set of high-level repeaters that cover much of the entire State of California.

And I advise all newcomers to the wonderful world of Amateur Radio to do about the same "homework" I did - to join their local Club(s), and get excellent advice from those in their own areas.

Jesper (and other interested individuals),

Though you can operate with Extra class licensee privileges in the US with your reciprocal permit, as soon as you qualify for, and receive a US call sign any license class), your reciprocal permit becomes invalid. From the time of your license grant on, you are considered to be a US ham, and you are bound by the limits of the US license class that you hold. To qualify for the US Extra class license you will have to pass the following exam elements:

Element 1C - 20 words per minute Morse code
Element 2 - Novice written exam
Element 3A - Technician written exam
Element 3B - General written exam
Element 4A - Advanced written exam
Element 4B - Extra written exam

US examination elements are based on a scale of increasing difficulty , that is to say that each element deals with more advanced operating techniques and technical knowledge as the candidate advances in license class. I hope this adequately answers your question. If you need further information, please call the ARRL VEC at 1 860 594-0300, Monday through Friday from 8:00 AM to 5:00 PM Eastern time.

73,

Wayne K. Irwin, W1KI

>We need two classes. 73.5, de Hans, K0HB

Good idea. Maybe even better is one class. If we were starting fresh and designing from the ground up this system might even make most happy. However, the political problem is what to do with those already licensed. Some don't want to lose privileges. Others don't want to have someone get a free ride when they had to suffer in the past. Ancient traditions also are hard to change. Therein lies the rub.

It's kind of like the Windows95/98 operating system. It could have been better and more stable if it could have been designed only for modern programs and didn't have to be support all those ancient DOS and W3.x programs. But to leave those people out would have been a big political blunder. However times are changing, and I expect that within a few years there will be no more support for DOS/W3.x anymore.

So too for ham radio. Maybe the support for ancient operating systems and practices will also die and we can get on with designing a modern license.

Yes, you will have to take and pass the Novice written, the Tech written, the General written, the Advanced written and the Extra written exams. You can, if you wish, take just the 20 wpm code.

> What would happen if I
> fail ?, could they deny me operating with my danish callsign ?.

I am certain that you would pass at least one license-exam level, if not all. This could be a problem because once you were issued a US call, your privileges would be as per that call. So if you passed the General, but failed the Advanced, you would be a General, limited to those privileges. What you may be able to do, and check with your VE team, is to take the exams and have them submit them to the FCC only if you pass. Otherwise, you can use your recip permit.

> I bought the study manuals for technician, general and advanced class,

The ARRL General, Advanced and Extra study guides contain more than just the questions, although we do have a Q&A series that presents the material pretty much question by question. For more info about the rules, you don't want the Handbook, you want the FCC Rule Book. I would, however, suggest the study guides because they concentrate on what you need to know to pass the exams.

I don't understand what all the fuss is about. I found the link in less
than 1 1/2 minutes. It wasn't that clear, but it wasn't that difficult
either. We aren't being charged to peruse this site, it is a little too
graphic intensive for my tastes, but no one is forcing me to stay at the
site any longer than I choose, and I wouldn't presume to force my taste,
or lack of it, on others. Having done a little HTML work, it's obvious
to me that a lot of effort was put into this site. I might even be a
little jealous, as I have little or no artistic skills.

I would be inclined to cut the site author a little slack, hey it even
has a section on Ham Radio.

2073. ARLB095 ARRL Petitions FCC for LF Allocations

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-03 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb095.1998@arrl.org>
Source record: 158820
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB095
ARLB095 ARRL Petitions FCC for LF Allocations

ZCZC AG95
QST de W1AW
ARRL Bulletin 95 ARLB095
From ARRL Headquarters
Newington CT November 3, 1998
To all radio amateurs

SB QST ARL ARLB095
ARLB095 ARRL Petitions FCC for LF Allocations

The ARRL has petitioned the FCC to create two low-frequency Amateur Radio allocations at 136 kHz and at 160 kHz. ''These allocations will permit experimentation with equipment, antennas, and propagation phenomena in a small segment of the radio spectrum that has not been available to the Amateur Service for many years,'' the League's petition declared. The petition was filed with the FCC October 22.

Specifically, the League has proposed permitting CW, SSB, RTTY/data, and image emissions for amateurs in a 2.1-kHz ''sliver band'' from 135.7 to 137.8 kHz and in a 30-kHz segment from 160 to 190 kHz. The 135.7 to 137.8 kHz band adheres to the European Conference of Postal and Telecommunications Administrations (CEPT) band plan.

The ARRL has proposed allowing a transmitter output in both LF segments of 200 W PEP, but in no case greater than 2 W EIRP (effective isotropic radiated power). The League's petition points out that poor antenna efficiencies and ground-loss characteristics likely would keep EIRPs at less than 1 W. The two bands would be available to General and higher licensees.

Unlicensed experimenters--some of them hams--currently operate on LF in the US under the FCC's Part 15 rules. These limit transmitter input power to 1 W and impose substantial restrictions on the size of the antenna. The proposed allocations ''will provide the only low-frequency allocation for amateur use and will accommodate more flexible experimentation than is permitted under current Part 15 regulations,'' the League's filing said.

Hams would be secondary to the Fixed and Maritime Mobile services in the 136-kHz allocation, and secondary to the Fixed Service in the 160-190 kHz band. The League said its engineering surveys suggest

that hams could operate in the two segments without causing problems to power line carrier (PLC) systems already active in that vicinity or to government assignments. Unallocated, Part 15 PLC systems are used by electric utilities to send control signals, data and voice.

Calculations included with the League's filing demonstrate how inefficient even relatively large radiators can be on LF. For example, at 200 W TPO (transmitter power output) and a 200 foot vertical radiator, efficiency is only in the range of 1%, yielding up to 2 W EIRP. A more practical setup--200 W TPO into a 100-foot vertical radiator (efficiency of 0.2%) would yield an EIRP of between 10 and 40 mW.

Several countries throughout the world already enjoy LF allocations. These include New Zealand, Great Britain, the Republic of Ireland, and several European nations.

A copy of the petition is available on ARRLWeb, http://www.arrl.org.

I've operated both radios and I think that the tuner works for recieve automatically in the TS450 if you have it switched in. If you'll notice, the tuner light will flash when you make a band change or even a big frequency excursion inband. I think this is the tuner adjusting the antenna for best recieve.

Nothing personal, mind you...but I would NEVER retrieve a "sensitive" file such as you're touting (an anti-virus program) from anyone other than the author or author's designee.

And this is about the ONLY time you'll ever see me use "absolutes" online.

The major anti-virus utilities all have their own official Web sites, and that's where I would go on my own to grab the latest and greatest.

Again - nothing personal. But I haven't run into ANY virus problems in over twenty years' worth of downloads, so I can't be too far off-base with my methods.

Tonight, on the Laura Lee Show (8 PM PST / 11 PM EST), at http://www.talkspot.com/meta.htm, Michael Theroux, Director of Borderlands Research Foundation, says the EQ Pegasi SETI signal is a HOAX. Theroux makes the case that ET is not phoning home, and that this is not a misread of the data, but an intentional hoax.

Also, extraterrestrial researcher Vaughn Greene analyzes 6,000 year-old Dogu statuettes found in Japan, and finds over 30 points of similarity with modern space suits worn by NASA's astronauts. We'll also look at the Japanese legends, Shinto mythology, and ancient folklore, all of which infer visits by extraterrestrials.

I agree with you. This is exactly where the AV program comes from.
It is not resident on my personal site. My site has only a link to
the authors. They have an international reputation and are
considered by many to be the best. If you had followed the link you
would have seen this to be the case.

You only have a few hours before the polls close.

So vote your conscience....

==========
3 9 5 0 Jammer Ballot
==========
(To vote E-mail this ballot to DX302MAN@AOL.COM)

Catorgory one:
Who has put out the best jamming signal this year?
1 K5BLB - Sid Mahan of Escenscia MN
2 W9ART Art Visser of South Bend IN
3.WA9KJI Dave Castle of Evensville IN

Catorgory two
What was the best type of jamming you heard?
1. "Anchors Aweigh" By K5BLB
2. "Blah,Blah,Blah,"
3. Walter Millers "Marching Music"

Who was the worst Liberty Net Member, based on thier contrbutions to the net?
1 K4GAR - "media monitor" tapes
2. Harvey's monotone reading at 3rd grade level
3. Andy's foul mouth

If the Liberty Net changes it name: What would be it's new title

1. The lickty-crotcty net
2. The Great- Nit-wit net

And Finally Who gets JAMMER OF THE YEAR!

1 W9ART
2. K5BLB
3. WA9KJI
4. K5ZU

Winners will posted on Saturday Vote only once!

2089. Meaning of 807

Help me out here. I'm slowly building a ham radio jargon Web page. I've heard that
"807" means -
1. Any alcoholic beverage: The 807 tube was very "strong", hence any "strong" drink is an 807.
2. A beer: The 807 tube resembled a beer bottle.

What story did you hear?

Thanks.

> ststes, including no doubt the State of Tejas, has SIX classes
> of driver liecsnes/permits:
>

Oh its even better, Phil. The system was changed a couple of years ago
to fall in line with federal requirements. The numbered license class
system is gone. We now use letters.

> Class 1: Any combination of vehicles, including those
> permitted by Classes 2 and 3.

Now called "Class A". Limted to combinations of two vehicles (one
trailer)

Endorsements (going by memory here since I am endorsementLESS and don't
have the book)

"T" Trailer endorsement required for pulling more that one trialer. It
covers triples, even though that is not a legal combination in CA.

"X" Haz Mat endorsement required for just about anything the requires
placards on the truck.

"P" For buses that carry passengers. A specific road test is required.

There is a letter for tanks trailers to, but I forgot what it is.

> Class 2: Bus, single vehicle with three or more axles,
> "standalone" or towing another vehicle
> weighing less than 6000 pounds gross, and

> vehicles permitted by Class 3.

Now a "class B." Its for single vehicles over 26K. Towing is at class C limits. Driving a bus carrying passengers requires a "P" endorsement. Class B does not include "air brakes", but can be added an added endorsement.

There is a specific "class B fire fighter" license for driving fire trucks.

Class A and B licenses are only valid when in possession of a current medical examination certificate. They must be renewed every two years.

> Class 3: Certain farm vehicles operated on the highway,
> schoolbus or farm labor bus (with special
> endorsement), three-axle motorhome/RV, three
> axle vehicle towing another vehicle weighing
> less than 6000 pounds gross, and any two-axle
> vehicle "standalone" or towing certain types
> of loads.
>
> This is the usual "driver license" held by
> most of us.

This is now the "class C". Allows operation of a vehicle less than 26,000 GVW (this is the limit you will see printed on the BIG Ryder rentals, etc.) Does not allow air brakes and there is no such endorsement for a class C.

A "class C" allows you to drive a three axle motor home. You can tow up to 6,000 with a passenger car. You can tow up to 10,000 as log as the towing vehicle weight over 4000 unladen and you are not driving for hire.

You can tow a boat trailer if the combined vehicle weight is under 26,000 and its for recereational use only.

Anyone can take a written test for a non-commerical class A that allows you tow a trialer coach or travel trailer up to 15,000 lbs on a fifth wheel - but not for hire.

There is also a "commercial class c" that provides for a hazmat endorsement. For people that carry certain materials that require placards on pickups. There is also a medical certification required for driving "van pools".

> Class 4: Two wheel motorcycle / motor-driven cycle (moped or
> scooter) / motorized bicycle. Can be an
> endorsement on Class 1, 2, or 3 license after
> examination.

Class M1 is the motorcyle license that includes motor driven cycles and motorized bicycles.

Class M2 is the moped license.

Nobody under 21 can get an M1 or M2 license without taking a motorcycle safety course.

> Learner's Permit: Requires licensed driver of proper class

> myself a "professional driver" by training and experience even
> though I have a Class 3 license.

The term "commercial driver" does have meaning. Class A and B are true to the federal commercial driver standards.

> Not as simple as we thought, eh??

I think the analogy is still pretty simple. An amatuers are licensed much like non-commercial drivers. Those who are employed in the radio business may need other training and credentials like commercial drivers.

The California class A commerical driver license requires three additional written exams and much more comprehensive road test than you take for a class C. Additional endorsements require additional exams. The "passenger" endorsement require still another specific practical exam, even if you already have a class A or B.

The problem with the analogy is that driving motor vehicles and operating an amateur station are not even comparable from a public safety standpoint. There is not a lot you can do with amateur radio that could get people killed (at least not things we test for). Sure you could kill *yourself* fooling around with electronic stuff and antennas - but you could do that trying to fix a TV (which requires no license).

On the other hand, your driving skills must meet an established standard in order to protect everyone else on the road.

Amateur licensing does not need to be anywhere near as complicated as driver licensing or pilot licensing (I have seen that suggestion too). There is just no need for it at all.

Maybe in 1963, but by 1965 there weren't many who'd do that. Some, but
not a lot. I also remember a few who tried to get me (and others) to speed
up by sending fast and disappearing when we didn't match speeds.

> The one or two "old
> timers" on 75 meters who didn't like newcomers ("No lids, no kids, not space
> cadets") were universally looked down on as poor examples of what a ham ought
> to act like.

Though I never heard the buzz phrase back then, there were a lot of ops
who wouldn't talk to kids, at least on 20M where I hung out. I was 15 by
the time I got my General and made it to 20 USB.

> The Novice bands were a "cacaphony of exhuberance" to steal a

> patiently working WN4KKN or WV2CNL -- nobody remarked that it was "nice" of
> them to do that -- it was just part of being a good ham.

Again, there were a few but not all that many. Most all the available ops
in the Novice bands used Novice calls.

Your points are valid and well-taken, but a bit overstated. Not that it
wasn't happening, but the first time I heard a cuss word on ham radio was
well into the seventies, and the guy who said it was roundly castigated
for using it, and he apologized for letting it slip rather than demanding
petulantly to know who the (as-yet) unidentified station was. I never had
anyone try to walk up and take a frequency by "force" back then; the only
time anyone talked over my QSOs was when they couldn't hear the station I
was listening to, and a simple "frequency's in use" always got a "sorry"
as a last peep. Every time they made it easier to get a license, things
went downhill; operating techniques got sloppy or overlooked entirely,
more sloppy and/or overmodulated signals came on the bands, more rudeness,
etc. etc. I didn't see a gradual trend; rather there was a stepwise change
every time the license tests were eased. The less it took to get a license,
the less the holder cared about having it. The FCC's flagrant refusal to
enforce the regulations helped the baddies a great deal, but I saw that
more as a part of an overall strategy combined with easing the licensing
requirements than anything.

What was it, 1966? when QST proudly announced that we were up to 400,000
hams in the U.S.

An 807 glass tube somewhat resembles the glass that beer-on-tap
sometimes comes in.

By your logic, the Olympics would really suck these days. Unlike amateur
radio, the Olympics kept their standards high, and the performances of
athletes are better than ever.

But we have more participants now, and the Olympics doesn't. So there.

I have for sale the following: (US 48 states, buyer pays shipping...)

Bird 43 Wattmeter w/ case, 2xPL259 and 2xN female QC connectors - $125
(case can hold 3 slugs and a dummy load) - very good condition
Bird 8085 50w/50 ohm dummy load w/male N connector - $50
Elements -
1k - $45
100A - $35
100C- $35
100E - $35
1000H - $45
25E - $35
250C - $35
250H - $35
5C - $35
50C - $35

Or take all of the above for $500 and I will ship UPS 3-day.
If interested, please email me directly...

2098. Re: Meaning of 807

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-03 00:00:00 UTC
From: Cliff Gieseke <cliffg@texas.net>
Message-ID: <363FE05B.15FD42A7@texas.net>
Source record: 158845

Back in the 50s and 60s, I always heard "a cold 807" as a reference to a cold beer. A rig with an 807 final was not very powerful, but it did have a little punch. Mine was a Harvey Wells TBS-50C bandmaster, running about 50 watts.

i have had Midland 2 Mtr and 220 radios, a Yaesu 23-channel xtal 2 Mtr
radio, FSTV transmitters and receivers but nary an HF rig as I have been
licenses as a technician since about 1976.
I never had any interest in HF so have always been on 50 MHz and above.
I have also had a 440 FM transceiver which later was sold and turned into
a repeater. For a short time, I had a Heath 6 Mtr lunch box feeding a
TV yagi antenna. I had home made quagis for 220 and 440 and a British
ATV antenna - the one with the X cross arms.
I got my ham license originally for RTTY and ATV although I never ran RTTY.
My only radio for the past 10 years or so is the original ICOM IC-2AT with
an outboard PL board.

Incentive licensing is what almost shut the ARRL down. It was one of
the most stupid things ever promoted by the ARRL. I am not a memeber
nor will ever be..

Steve W4LW yes, I am extra class WITHOUT any ARRL help!!!

>Why not make an amateur radio license like an amateur driver's license?
>One size fits all. People are either allowed to drive a car or not.

In many ways amateur radio licensing is quite similar to the licensing
of drivers. A driver's license is a permit to operate motorized
vehicles on public roadways. There are various endorsements that can
be added to an individual's license. These endorsements concern the
various types of vehicles found on our roadways. If an individual
wishes to drive a motorcycle, a specific requirements must be met to
receive that endorsement. The same goes for the numerous categories of
commercial vehicles. One of Georgia's license classes even involves
the transportation of HazMats.

The logic behind multiple classes of driver's licenses seems obvious.
This does not justify five or six classes of amateur radio licenses.
Perhaps just two classes are needed, entry-level and
already-entered-level.

1962. A second-hand xtal-controlled Heathkit DX35 xmtr (remember that one?) and a Heathkit GR91 general coverage receiver. Dogs, the both of 'em. Wouldn't even be worthy of boat anchor status, I'd say. But, when you live in the town where the Heathkit factory is located, then they're pretty easy to come by at a cheap price. And when you're only 14 years old, a "cheap price" is often the deciding factor in such matters, so off CQ'ing I went.

I made some QSOs (I think). Well, maybe one or two anyway. At least I know for sure I worked WN8GGM, cuz he lived in the house across the street from me. Of course I called him on the telephone to set up a sked first. (Then the rat never even sent me a QSL. I'm still pissed off at him today for that!)

Ah yes, those were the days. Sure am glad they're gone.

I don't know who or what you are, but a historian you are NOT. The FCC--you know, that entity that regulates the electromagnetic spectrum in the USA- first proposed Incentive Licensing in 1959-about the time you were eleven years old. The ARRL entered the scene as it always has--as the advocate for hams, and most of the details of the plan that was adopted came from the FCC, *NOT* the ARRL. In fact, ARRL persuaded FCC to drop succeding phases which would have caused even more pain to some hams. But it gives you a good excuse to inaccurately bash the League, and complain, to say nothing about braying your license class about. If you held a pre-Incentive extra, and that seems unlikely, you had one of some 4,000 then issued. Most were held by commercial CW operators, and there was no real reason for mainstream hams to concern themselves, after all there was NOTHING to be gained except the "prestige". And for most people "bragging rights" are worth what they apppear to be worth--not much.

So stay away from the ARRL-- they'll continue to work for the best interests of all hams anyway, you included--if they can figure out what those interests are, given all the garbage being spread these days.

Message-ID: <19981102233913.00725.00003783@ng87.aol.com>
Source record: 158879

It's now Nov 3rd by the time you read this.

We are taking votes on 3950's most dreaded jammer.

Enclosed is a ballot to use for the Voting

You heard some of them this weekend campain for your vote.
==========
3 9 5 0 Jammer Ballot
==========
(To vote E-mail this ballot to DX302MAN@AOL.COM)

Catorgory one:
Who has put out the best jamming signal this year?
1 K5BLB - Sid Mahan of Escenscia MN
2 W9ART Art Visser of South Bend IN
3.WA9KJI Dave Castle of Evensville IN

Catorgory two
What was the best type of jamming you heard?
1. "Anchors Aweigh" By K5BLB
2. "Blah,Blah,Blah,"
3. Walter Millers "Marching Music"

Who was the worst Liberty Net Member, based on thier contrbutions to the net?
1 K4GAR - "media monitor" tapes
2. Harvey's monotone reading at 3rd grade level
3. Andy's foul mouth

If the Liberty Net changes it name: What would be it's new title

1. The lickty-crotcty net
2. The Great- Nit-wit net

And Finally Who gets JAMMER OF THE YEAR!

1 W9ART
2. K5BLB
3. WA9KJI
4. K5ZU

Winners will posted on Saturday Vote only once!

The "old standby" in a case like this is a 1/4 vertical make from a UHF
connector and some wire. You can suspend it from the ceiling using an
existing hook or with a thumb tack.

I made no such assumption in my posting, nor did I find any in
Cecil's that he was proposing his revision to amateur radio licensing
only for a time when the regulatory framework is materially different
from that in place today.

Are you willing to put real folding money on that 2002 date? There
may be a sufficient will but there may still not be available time on
the agenda. It appears to me that too litle spadework and consensus
building is done in the working groups before these conferences such
that no more than ratification is needed at the plenary sessions.

What about the age limit? In Texas you cannot get a drivers license at age 16
unless you go to a certified drivers school.

Should the amateur license have a learners permit (Novice) and while having
the Novice take certified classes in amateur radio and upon completion be
able to upgrade to the Standard license (General).

Has anyone experienced RF hash (~ S7) in a Subaru on 40m or 20m? In particular I have a 1999 Forester that as soon as I turn the key to the on position (engine NOT running), the S meter jumps to about a 7 (and stays there). If I start the engine it remains at S7 but sounds slightly different (could just be the ignition noise added). I can't tell if it's from an onboard computer, the fuel pump, or something else. I know it's NOT ignition noise (there is some but very low level). Has anyone diagnosed this vehicle's noise? Does this sound similar to problems in other vehicles?

BTW, I traded a Ford Ranger that had it's fuel pump modified to reduce it's RF noise on HF (mostly 10m).

I am part of a group of engineering students who race a solar boat at the "Solar Splash" held annually in Milwaukee. I developed a telemetry system last year using some onboard and onshore computers and MFJ TNC 2 packet controllers. We rented a pair of Motorola radios to work with the system.

Those radios worked well, but we would rather not worry about renting all the time. So, we're looking at what options we might have. What would anyone recommend? We only need about 500m range and have good line of sight for this application. Commercial radios tend to be expensive and require a license. Ham equipment would be great, but we rarely have anyone on the team with a ham license to operate it. Is there some option within these two that would work for us (relatively inexpensive & simple license requirements). Would FRS equipment work?

I would appreciate any thoughts.

I vote in the primary. I vote to get rid of the weasels.

I never vote in a general election. After the primary, I don't
really care who wins. If your candidate loses the primary,
it really doesn't matter who wins. Jack-Ass or GOP, they both
are part of the 5 Trillion dollar problem.

In Oregon, you don't have to vote anyway, as the candidates
are already elected before the polls open.

I, too, was first licensed in 1964 (WNï¿½KSR). My first rig was a homebrew transmitter consisting of a 5763 oscillator stage with a 6146 final - xtal controlled of course. Built it from a QST article circa 1961. For a receiver I started with a National SW-54 using the vfo from a BC-458 as an external BFO. Even had a homebrew antenna tuner. The tuner had no case so there was lots of rf in the shack. Used to stand a florescent light bulb next to it. Looked great when operating cw with the flashing light!
When I got a little money saved up, I made a trek up to Council Bluffs, Iowa and bought a Globe Scout 680A from Leo Meyerson (founder of Globe, Galaxy, and World Radio Laboratories). Matched that up with a Hammarlund HQ-110A. Thought I had the dream setup then!
When I upgraded to Tech in 1965, I picked up a Heathkit Twoer (was even the ARES net control station with that for awhile) and a Lafayette HE45b for 6 meter AM.
Managed to work Puerto Rico on 6 meter meteor scatter running 10 watts once back then!.
The gear back then was pretty primitive, but it sure was fun!

1964 must have been a prolific year for novices. I was also licensed in 1964 as WN3DNC after being an SWL for about 4 years using my father's Hammarlund Comet Pro superhet receiver with plug in coils. Did a lot of listening on 75 and 40 and managed to do some BCL dxing with it and a 30 foot wire antenna. I still have the Comet Pro.

I was licensed at the end of 64 and received as a Christmas present a Hallicrafter's
SX110 purchased from the Sears cataolg. After using the Comet Pro, this was heaven. As soon as my licensed arrived, my father and I paid a visit to a store in the Philadelphia area called "Ham"Burguer. After chatting with the owner I left with a Heath DX40 and about 8 novice band crystals. I also orderd a Heath Twoer kit from their catalog at about the same time.

I knew nothing about TR relays, so I strung up 30 feet of wire for the DX40 running opposite the 30 feet I had up for the SX110 and used the standby switch on the receiver when I was transmitting. My CW moniter was a transister AM radio which would generate a beat note on various frequencies whenever I transmitted. I knew nothing of coax feed and just plugged the end of the 30 foot wire into the center of the the SO239 on the DX40. I could never get it to tune up the way the manual said it should, so I just manipulated the tuning until I had about 100 Ma of plate current when the key was down. I had no idea where I was transmitting and called CQ on and off for almost a month on 80 meters and never heard a reply. I did receive an OO report and a FCC notice that I was being heard on 7.428 Mc.

After getting the FCC notice, I decided that I needed some help and located a ham who lived a few miles from our house. He showed me how to make a dipole and handle coax cable. Walked me through the tuning procedure for the DX40 and he also helped me with the Twoer and fashioned an old TV antenna to function on two meters. After putting up the dipole, I began to make contacts. I worked him
every night on two meter phone.

The DX40 turned out to be a pretty good transmitter and I used it on phone when I got my General, and added 6 meters to it after reading a how to in 73 magazine. The SX110 with the crystal filter was not a bad receiver and it eventually served as a tuneable IF for 6, 2, and 432mhz converters. I think they were both gone by 1967.

try tekkinc@planetkc.com

This is tekk. They are in Kansas City USA 800-521-8355
They have some small transceiver modules and they work pretty well. 2 watts.
Approved in some countries. They work good at 2400 bps so they should do good
at 1200.

It's interesting how some equipment has held it's value. At the local hamfest two weeks ago, someone was sitting at a table with two of the Lunchboxes, I didn't check but assume one would have been for siz and the other for two, and maybe one or two other items. The way it wsa presented, with no clutter, gave me the impression that he had built them and kept them all these years. Each of them had a fifty dollar price tag on them. Isn't that about the price they were originally (or maybe I'm forgetting and they were actually cheaper)?

A couple of tables down, someone was trying to sell an IC-22 (the original, which used crystals) for $75 dollars.

For me, definitely. I got started in the tail end of the tube era, and after a long layoff to play and then work in computers I gave it another try -- very sterile, nothing like I remembered. Luckily, my mom then did something great for me (though at the time I thought it was a tragedy!). After years of storing my "junque" in her garage my family and I were finally settled in our home and I drove over one day to get the junque. Well, turns out she had put it all out on the curb a few months before, assuming I'd never come back for it! Boxes of tubes and parts, a perfectly good HR-10B (!!!), Tek scope (!!!), etc, etc. After not thinking much about it all those years, the loss of all that stuff ate at me, until I started noticing similar junque here and there, and on the net, and well....

For me it's the sight and the smell of a tube radio, either open or through the perforated cabinet. There's truly magic in those orange spots and shining bottles. Can't wait to get settled into our *next* house next month where I get my own radio room! Then my new boxes of junque will get turned into new magic.

The license is 5" X 7", so any 5 X 7 frame will fit. You can get
inexpensive nice frames at discount stores, or you can get expensive
really nice frames at picture frame shops.

>The "old standby" in a case like this is a 1/4 vertical make from a UHF
>connector and some wire. You can suspend it from the ceiling using an
>existing hook or with a thumb tack.

Ah, but an even easier-to-make antenna at no cost (other than
the coax) is to remove ~19 inches of outer insulation from
the feedline; at that point separate the inner conductor and
the outer braid, and suspend them so that
1. they form a straight angle, and
2. they're at right angles to the feedline (i.e. the feedline will
need to run perpendicular to this newly formed dipole).

```
|
| <--inner conductor
|
================radio
*
*
* <---outer braid
*
```

The two ends of this vertical dipole can be suspended with say, thread.
MAKE SURE THE FEEDLINE RUNS PERPENDICULAR TO THE DIPOLE'S ELEMENTS.

(As an aside, WWVH uses vertical dipoles for its HF transmissions.)

Oh, here's another simple coax antenna: Again remove ~19 inches of
outer insulation, and carefully push the braid down so that it overlays
the feedline:

```
|
| <--inner conductor
|
***
*** <---outer braid pushed down so that it covers the feedline
***
+ <---feedline
+
++++++++radio
```

What we have here is a vertical coaxial antenna. Again, use thread to suspend, or tape to a window.

>A.D. 1999 - The LAST year of the 1900's.
>A.D. 2000 - The LAST year of the 20th Century.

When the hundreds column increases by one (in this case, from nine to zero) a new century begins. In addition, when the thousands column increases by one (in this case, from one to two), a new millennium begins.

Hi Bob - long time no see,

We're pretty close on the starting info:

1961: Build and used an Allied Knight-Kit Span Master receiver

1962: First licensed (novice) used Heathkit DX60 and Span Master for first contact

1963: Added Hammarlund HQ110 and home brew single tube 40M CW xmtr.

Then I digress...

1966: Changed to Johnson Pacemaker (a real boat anchor - phasing ssb rig)

1970: Changed to Heathkit SB102

1973: Changed to Drake TR4

1977: Changed to Kenwood TS820 - added SB220

1984: Changed to Kenwood TS430

1994: Changed to Kenwood TS850 - and I'm still happy with it. This is a first, I always had a case of "new radio-itis"

We are a light turnout- But nevertheless, we might have a winner.

W9ART is in the Lead for Catorgory one 55% over slightly over W2YEE
Jammer of the year- W9ART Leads by one vote.

If he wins Cat one, It will help his overall votes towards "Jammer of the Year"

Art could a get a Certificate mailed to him.

CNN and Fox News are projecting W9ART to be the Winner.

Can someone get on 3950 tonite and Inform KJI or ART that we are having this
vote?

I recently bought a second hand delta loop HF antenna. It's a 7
element rig for 10-15-20m model DL-TRI.
Made by Delta Loop Antennas Inc. Don't think they are still in
business. The gamma match for the 20m driven element is broken. Before
I try to fix it I would like to know if anyone out there has a
replacement g-match perhaps from a junked similar loop. Going to make
a nice winter project. Thanks for viewing... Scott VE1AFN. ..>>>

Just my general ramblings but....

As an aging (41) wannabe novice trying to learn code and work a tough job for a company that might close and trying to do a good job raising an 8 year old - (whew) - I find what looks like this elitist group kind of a put-off. But I'm plowing ahead anyway.

Perhaps it's because I'm on the very low end of the ham food-chain but it sure would seem nice to think there are people out there to help instead of stomping on you because you're "beneath" them in some way. So reading about the early 60's was enjoyable. Assuming it's true.

Also about the "A/B ticket - improve or quit" idea. What would be wrong with my being a novice all my life? Given the time I can invest this is all I might ever achieve and if I stay where I belong then I see no harm done.

My point? Hey Superstars - back off.

Thanks for reading, this post is for a friend.
The problem is that the sidetone audio is too loud on his 2950 ranger
and he's not sure if there's a pot inside the radio to turn it down or
what.
Any help is appreciated.
Thanks,
Don

Source record: 158768
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

2169. Subscribing to r.r.a.misc via an email list

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <71ose7$neu@news.Hawaii.Edu>
Source record: 158769

G. D. PALMER <kd4utf@juno.COM> wrote:
>send usenet/rec.radio.amateur.misc

That won't work. You need to send an email to listserv@ucsd.edu
and write:
subscribe info-hams
and then you'll be hooked up to rec.radio.amateur.misc. Don't
forget to save the Welcome message - it will contain the
instructions on how to unsubscribe.

All the day's articles will arrive in a single, lengthy email digest.
It's really a terrible way to read a newsgroup! To skip uninteresting
articles you have to scroll past them; it's really frustrating when
someone sends a binary.

sk1409,
The battery (BP-90) will handle about 400 mA intermittent (95% rx - 5% tx) duty with reasonable battery life. Considering some transmitters are about 50% efficient you would get about 5W output max. These are all variables though and I make a lot of assumptions. . .like duty cycle, reasonable battery life, efficiency of your transmitter, and more. . . .I hope this helps. Maybe the radio gurus can add to this. . . .

>Regards,

Be aware of course that the ITU "recommendation" is purely a matter for the
local administration. here in VK we have 5 (count 'em FIVE) classes of
licence, allowing a number of modes / band access conditions.

Our "Limited" licencees (of which I have been one for the last 24 Years)
are permitted Full power (400 PEP) across the entire VHF-UHF-SHF spectrum
from 50Mhz and up, in addition we are also permitted (very) limited access
to frequencies BELOW 30 Mhz, this is 29-29.700 in FM mode only (150Watts).

Yes not a great deal of H.F, but it was authorised by our local
administration
a couple or three years back.

Have the H.F bands suddenly dropped in quality, because a bunch of
non-morse tested but licensed operators have gained access ?

Of course not, but 10 Metres is likely to be gobbled up faster by the
"free-banders", the old story (sadly) "use it or lose it - by default -
remember that 27 WAS an Amateur band, that was lost to the pirates
20 plus years ago.

Morse does not worry me - for those that might think that I have
"a problem", I have been having a lot of enjoyment in many modes on
the bands available for the last 24 years, and get a chance to explore
the "lower" regions of H.F during field days etc, and this is ONE Amateur
that is really looking forward to the next Solar peak - just try and keep me

off of 10 Metres then !! :-)

All the best from South Australia, Glenville. VK5ZCF

By joining the ARRL, you can't change anything. You will get a magazine
subscription.

ARRL membership are sheep. Just look at those in Director positions.
They are all in-bred.

You won't change anything, and all the sheep vote for the incumbent 99%
of the time (or don't vote at all). 1 vote means squat in the big picture.

If you impose an age limit on amateur licensing, most amateurs would lose theirs. The bickering and flaming isn't only limited to these newsgroups you know. Some of the most mature amateurs are those between the ages of 4 and 20.

I have never seen a younger amateur's name in print for being cited and fined by the FCC.

So much for the age thing.

Wrong.

>You will get a magazine subscription.

Yes, that's one element of membership.

>ARRL membership are sheep. Just look at those in Director positions.
>They are all in-bred.

MOST volunteer organizations are the same when
it comes to getting VOLUNTEERS willing to put in
the time and effort needed for the position. I was national
president of a sports car club. I NEVER was opposed for
office AND my successor wasn't either.

>You won't change anything, and all the sheep vote for the incumbent 99%
>of the time (or don't vote at all). 1 vote means squat in the big picture.

That's the same bull that many people spout as to
why they don't vote in any election. The reality is that
every vote adds to the TOTAL and I've seen votes
as close as a handful that made the difference.

So I'll reiterate Marv, KC0EGB's post...

So you are telling us you don't vote?
Those who do not vote should have NO voice.

>That's the same bull that many people spout as to
>why they don't vote in any election. The reality is that
>every vote adds to the TOTAL and I've seen votes
>as close as a handful that made the difference.

Do you realize that in Amerika you speak English (for the most part) because
it won out over German becoming the national language of this country....BY
ONE VOTE!

Andrew Johnson was saved from impeachment BY ONE VOTE!

By ONE VOTE my ex-wife's vote gets cancelled...

The list goes on and on....

Ah, but you say my vote gets canceled in the process....but does it really?

Bleh heehehe hehehe

Nice try, but the Gregorian calendar doesn't have a year zero, so hundred year and thousand year increments, centuries and millenniums, begin with a year ending in 1. 2001 is the first year of the 21st century, and of the millennium. The year 2000 is the last year of the 20th century, and of the millennium.

And to make things more interesting, according to the Bible, Jesus Christ was born during a census ordered by the Emperor Augustus, and while Cyrenius was governor of Syria, and while Herod was ruling over Judea. The only date when all three were in the required jobs was 4 BC. (Or in the system used for Roman payroll records, 749 AUC, AUC meaning after the founding of the city of Rome.)

So Jesus Christ was born four years Before Christ. This unfortunate situation is due to a small mathematical error made by the monk Dionysius Exiguus in 525 AD when he was attempting to calculate the date of the birth of Jesus for Charlemagne (who instituted the practice of dating events relative to the birth of Christ). Therefore, the century and the millennium actually changed in 1997, and we are currently in the 21st century and third millennium Anno Domini.

Right, and of course there always seems to be an exception.
There was a oldtimer ham over in western Ky who would, each
evening according to reports from those who purported to
know, start the evening with a case of warm beer, and his
on-the-air language deteriorated as the case emptied. By the
time the evening was mature, he was a real basket case, and
the language he used on the air was almost unique to most of
us. Finally the FCC, aafter giving him more that ample time
to reform finally pulled his license and he disappeared.
Sadly, that sort of language is routine today on some
frequencies. Hopefully, the recent FCC reorganization of
enforcement responsibilities will held clean this up. The
word is being spread, that FCC teams are rolling again, and
that fact alone will help very much in forstalling much of
this inexcusable trash.

I never had
> anyone try to walk up and take a frequency by "force" back then; the only
> time anyone talked over my QSOs was when they couldn't hear the station I
> was listening to, and a simple "frequency's in use" always got a "sorry"
> as a last peep.

I' sure that some of this is an artifact of the fading of
civility in our society at large. One never heard of road
rage then either, but I'm sure that this factor is not
nearly the whole story. When the 'boss' looks the other way,
some folks are always temted to play. Maybe the boss's
attention to detail will 'get their attention'.

Every time they made it easier to get a license, things
> went downhill; operating techniques got sloppy or overlooked entirely,

Yep.

The FCC's flagrant refusal to
> enforce the regulations helped the baddies a great deal, but I saw that
> more as a part of an overall strategy combined with easing the licensing
> requirements than anything.

A part of the overall liberalization resulting from the 60's
generation taking over the government, which is still in
progress, but has found that it must heed other voices as
well.

I wasn't exactly thrilled to learn that I'd lose much of
the General class privileges either. But "incentive" I
clearly understood, and acted upon. Too bad that so many did
not, choosing instead to wallow in their bitterness. I
regret that many oldtimers lost dearly earned privileges
which they were never able to replace, and to me that was a
huge mistake, to just dump these people. The fallout from
that alone is what caused all the furor over Incentive
licensing that lasts to this day, and I know that is a
mistake the ARRL would never again support (I'm not sure
they willingly supported it then), and hopefully the FCC
would never repeat.

Hello,

I am trying to decode some digital data that is broadcast over our local continuous weather station on 162.475 MHz. I am unable to find out the kind of data that is being sent.

Would anyone in this newsgroup be able to determine what type of data is being heard if I e-mailed them a .wav file of the sound? I feel that if I know what type of data it is, I could find some software that could decode it and put in in text form.

I thank you in advance for all your time.

James

That was the original intent of the Novice class when it came out on July 1, 1951. The license was good for one year only. At that time a novice had 50kc (now kHz) crystal controlled on 80 meters and am on 2 meters (there weren't very many around on 2 at that time). Within one year you had to learn 13 wpm and take the General test or get off the air. Also at that time Generals didn't have 75 meter and 20 meter phone privileges. Only the old class A had that. Shortly after 1951 they opened 75 and20 to Generals. The intent in that year was two classes of licenses -- Novice and General (also Conditional with same privileges as General if you lived over 125 miles from an FCC examining site). I don't think we want to return to those days either.

Byron, Wï¿½EBA (was WNï¿½EBA on July 23, 1951 and made general after a year of CW operation on 80 meters).

Shows what happens when I don't follow my own rules or advice.

(Shame on me)

When I started typing the "list" I started with "Class A" and
then grabbed my paper copy of the California Vehicle Code (I
was at home at the time, not in the office, and it was an older
copy) and copied out the "Class 1-4" stuff.

Of course, were I advising a client, I would have used the
up-to-date CLOD version which is updated each quarter (CLOD =
California Law on Disk, the CD legal subscription series by
Lexis).

The proper method to charge NiMH cells is much different than the proper manner in which to charge NiCds.

Sure - plenty of people are doin' it - that is, charging NiMH cells in units built for NiCds - but they are NOT achieving the maximum performance from their NiMH packs.

Properly-maintained NiMH packs only last about 1/3 the total number of discharge-charge cycles than do NiCds (500 versus 1500). So to mis-treat them actually cuts this proportion down further.

NiMH cells prefer shallow discharges rather than deep discharges. NiMH's longevity is directly related to the depth of discharge. HEAT is a major concern of NiMH cells. The NiMH cell generates considerably more heat during charge and requires a more complex algorithm for full-charge detection than the NiCd if temperature sensing is not available.

So...for maximum cell longevity, and to protect your investment, I would like to suggest that you purchase a Maha MH-C777a Universal Conditioner Charger for BOTH NiCd and NiMH packs from 4.8-12VDC. It HAS temperature sensing...will work on just about ANY pack we use in communications - NiMH or NiCd...doesn't use any "cups" or additional-cost accessories...and only costs fifty bucks retail.

- Clint Bradford

Hmmm. Last time I did the numbers

.400 (amp) x 9 (volt) X .50 (efficiency) = 1.8 watts

but I'm no guru. 8^)

Typical lifetime would be about 7 hours at 400 ma. current.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors

I was first licensed in 1962 (or was it '63?) as WN9ETW. My station was comprised of a Knight T-50 transmitter (6AG7/807/5U4 -- pi-net, would load into anything but a dead short), a National NC-105 receiver and a 40 m dipole at 35 feet. I later added an RME DB-20 "preselector" to pep up the NC-105 (especially on 15 m), and a Heathkit "Twoer" and Telrex 8-element yagi (rotated by the "armstrong" method).

My first QSO was on 40 with a YL -- WN8ETY -- near Detroit. Novices were, of course, rock bound then. I hung out at 7.176 and 7.184. I can't recall the freq. of my single 15 m XTAL (it was the near the bottom of the solar cycle then, so pickin's on 15 were pretty slim anyway).

Two meter AM was fun. I clearly remember my first experience with tropo using the ol' "Benton Harbor Lunchbox."

I still have the Twoer, and dearly wish I hadn't sold off the rest of the old shack. Maybe someday I'll go looking for the missing pieces.

I hold an Advanced ticket now and have the usual array of goodies. Yet somehow there was a bit more "magic" in the old gear and shack, a bit more mystery, challenge and uncertainty. But, the old Novice ticket was only good for one year and was not renewable; you moved up or out. Those of us who stuck with the hobby necessarily moved up and -- with that -- things changed forever.

The memories are pretty durable, though ...

73,

Mark -- WA9ETW

>Nice try, but the Gregorian calendar doesn't have a year zero, so

You've made the same error as others. Let's look at an example to
help you understand: When you were born, no one referred to you
as being zero years old - you were said to be in your first year
of life; that doesn't negate the fact that during your first year
of life, you *were* zero years old. After those first twelve months,
you turned one year old, and were then in your second year of
life. When you turned two, you were in your third year of life...

The first twelves months of the Gregorian calendar marked its first
year, i.e., the year zero. Unless you can present a reference that
explicitly states the claim you've made above, you do stand corrected.

2202. Graphics Sheets for Question Pools Available?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-05 00:00:00 UTC
From: dwinker@yuck.net
Message-ID: <QOo02.605$i63.1838156@ptah.visi.com>
Source record: 158603

I just easily got the question and answers for Elements 2, 3A, and 3B
from the ARRL infoserver. I also located them on the ARRL ftp site.
The top of the questions contains a notice something like this:

****
*** Note: A graphics sheet must be used with this question pool.
*** It can be obtained from the ARRL/VEC (225 Main St,
*** Newington CT 06111) for an SASE.
****

It seems odd that I can download the questions and answers for free
and then get the graphics for free with a Self Addressed Stamped
Envelope, but I can't just download the graphics. Is this true?
Does someone know where I could just download the graphics?

Thanks,
Dan (?????)

You all may want to print this out...

It probably isn't news to everyone else, but on visiting the R. L. Drake site this afternoon, I found the this announcement...it was news to me, and in case you missed it too, here it is...

The R. L. Drake Company regrets that, due to the fact that many required unique parts are no longer available, it will no longer be able to perform service on the following products:

AC-3 Power Supply R-4 HF Receiver
TR-4C HF Transceiver
AC-4 Power Supply R-4A HF Receiver
TR-4 CW Transceiver
C-4 Station Console R-4245 Marine Receiver
TR-4 CW/RIT Transceiver
DC-3 Mobile Power Supply RR-1 Marine Receiver
TR-6 6 Meter Transceiver
DC-4 Mobile Power Supply RR-2 Marine Receiver
TR22 2 Meter Transceiver
Down Converters RR-3 Marine Receiver
TR22C 2 Meter Transceiver
DSR-1 Receiver SSR-1 Shortwave
Receiver TR33C 2 Meter Transceiver
DSR-2 Receiver T-4 Reciter
TR72 2 Meter Transceiver
ESR-24 Satellite Receive T-4C Reciter
TR-4310 Marine Transceiver
LNAs (All Kinds) T-4X HF Transmitter
TRM Marine HF Transceiver
Low & High Pass Filters T-4XB HF Transmitter
550 Terminal Unit
ML2 2 Meter Transceive T-4XC HF Transmitter
7000E Terminal Unit
MSR-1 Marine Receiver TR-3 HF Transceiver
9000E Terminal Unit
MSR-2 Marine Receiver TR-4 HF Transceiver

If any of these Items are received here, they will be returned to the sender unrepaired along with a
bill for shipping, handling, COD fees if applicable, and a new carton if needed for safe reshipment.

Please note that, although we do not have some of the unique parts needed to service the above products, we may still have the part you need if you choose to service it yourself. Contact our Service Department by E-mail for information concerning specific parts, and see a partial listing of available items by clicking on parts.

About all I can say is: Buyer Beware. Unless you can fix 'em yourself or know someone who does, you better make sure they work properly before you buy them...because the factory isn't the game any longer...

ARRL Bulletin 96 ARLB096
From ARRL Headquarters
Newington CT November 5, 1998
To all radio amateurs

SB QST ARL ARLB096
ARLB096 Amateur Radio provides lifeline in Central America

Ham radio is playing a major role in rescue and relief efforts in storm-ravaged Central America. Media reports from the US indicate that hams in the Southern US are active in handling health-and-welfare traffic to and from Honduras and Nicaragua, both of which suffered death and destruction at the hands of Hurricane Mitch. Hams in Nicaragua who are still on the air also have been using Amateur Radio to coordinate rescue and relief efforts there.

ARRL radio gear that saw service several years ago in Puerto Rico after Hurricane Hugo and in Hawaii after Hurricane Iniki now is on its way to Honduras. ARRL Field Services Manager Rick Palm, K1CE, reports that five 2-meter hand-held transceivers and two 2-meter mobile units have been shipped to Omar Paredes, HR1OP, via his sister, Lidice Paredes, HR1LPS/W4, in Miami. Omar Paredes is affiliated with the Club de Radio Aficionados Central de Honduras in Tegucigalpa.

Responding to a request that came through the Hurricane Watch Net, Palm says a 2-meter repeater also will be sent to missionary Kenton Brown, KC8CXW/HR3, for a club in La Ceiba. The repeater will facilitate mainland communication with the islands of Roatan and Guanaja.

The equipment, part of the League's disaster communications inventory, will be on its way Friday on a Honduran World Foundation relief flight. The League also has made arrangements with WACOM in Texas to purchase a duplexer at a reduced cost. The duplexer and an antenna for the repeater will be shipped next week.

Lidice Paredes, HR1LPS, has been in touch with her brother on a regular 20-meter schedule. ''Every day is worse,'' she said November 5 of the news she's been getting from home via ham radio. ''The city

is in complete devastation.'' Lidice Paredes said her brother, a pharmacist, has told her that there is only enough drinking water available for another two or three days. Flooding and mudslides have isolated some residents. Others are still awaiting rescue from trees and rooftops.

''A lot of ham radio operators lost their homes, their equipment,'' she said, but hams like her brother who are still on the air have been attempting to coordinate their disaster response activities. ''It has not been very easy. It's taking a long time,'' she said.

As her brother indicates a need, she's been helping from the US to obtain and ship necessary medicine and supplies. Lidice Paredes also has been working with Miami-area TV stations to relay news from the disaster area.

Media reports also indicate that the Texas Baptist Men relief group is coordinating its efforts via ham radio in Nicaragua and Honduras. The organization has sent a planeload of supplies to Central America.

While the Hurricane Watch Net stood down after Mitch was downgraded to a tropical storm last week, other Amateur Radio nets have continued to be active. The Mexican Hurricane Net was active on 7055 kHz. A Central America Emergency Net also has been active on 7090 kHz. Octavio Miranda, TI2OHL, in Costa Rica reports the only contact is via ham radio, with limited help from some military helicopters.

The Salvation Army SATERN Net on HF has been assisting with emergency, logistical, and health-and-welfare traffic.

The unofficial death toll is approaching 10,000, and another 13,000 people are still missing. The remnants of Mitch hit the southwest Florida coast November 5 but was reported to be less of a danger this afternoon.

Hello Dan,

That's what the Novice license was invented for. The idea was that 13 wpm and General theory represented the minimum requirements for regular amateur operation. The Novice, with its 5 wpm code, simplified theory test, and severe restrictions (75 watts input, crystal control, narrow subbands and no HF 'phone), was meant as a learner's permit. It was good for only a year from 1951 to 1967, then 2 years until the mid '70s. Originally it was a one-shot deal - no renewals and no retaking the exam. Upgrade or leave. But the result was a lot of dropouts, so in the mid '70s it became retakeable, then finally renewable like all of the other classes.

Was the Novice a success or a failure? A good idea or a bad one? Depends on your point of view.

2211. Correct URL for AZ_PROJ azimuthal equidistant map server

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-05 00:00:00 UTC
From: Joseph Mack <mack@ncifcrf.gov>
Message-ID: <36423298.F367BB9A@ncifcrf.gov>
Source record: 158612
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

I run the AZ_PROJ azimuthal equidistant map server.
The server will generate great circle/bearing maps
on any scale from (almost) any location on earth.

The correct URL is http://www.wm7d.net/azproj.shtml

There was a copy at http://www.qth.net/azproj.shtml, but
I left this site about 6 months ago. The files there are
not under my control and although the html file are there
the map engine does not work anymore. THIS SITE DOES NOT WORK.
I have e-mailed Al and the webmaster over the last 6months
to remove these files, but the mail either bounces or
has not been answered. A notice that I left, saying that the
site is down, has recently been removed. I am sorry for the people
who keep logging into this site and cannot generate maps as it is
continuing to be indexed in search engines and ham web pages.

The server at http://www.wm7d.net/azproj.shtml will generate maps for
you, or you can download the code and run it at home for yourself.

A few words about the AZ_PROJ code from the README:

AZ_PROJ is a set of postscript files that generates azimuthal
equidistant projections of the earth from almost (not from the poles)
any location, giving bearing and distance from your location to any
other place on the surface of the earth.

AZ_PROJ is a freely re-distributable GNU public licensed postscript
program. Being postscript, the use of AZ_PROJ is independant
of the computer's operating system. Any computer
coupled to a display or printer which can display postscript will do
(you
can use Ghostscript on PC's and Unix machines to display
in X11 or SVGA, and to print on regular printers). Colored inkjet
printers
are now cheaper than B/W of only a few years ago, and can be used to
make
multicolored maps. AZ_PROJ has been used to make colored display/prints
on
a Mac, PC (DOS, DesqViewX, OS/2, W95, NT) and Unix (Linux, Irix, Hpux)
machines.

Source record: 158613
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

Readers,
I recently ordered an Alinco Dual Band DR-605TQ from Ham Radio Outlet. When it arrived, I found that it was TX and RX 10Khz off frequency. So I paid $6 shipping and returned it for replacement. When the replacement arrived, it had the exact same problem. Now, I must pay another $6 shipping to return another faulty radio. However, this time I have had enough of receiving poor quality equipment and will ask for a full refund. Unfortunately, Ham Radio Outlet will not reimburse me for my shipping costs, so the net is that I have paid $12 and received nothing but headaches.
Therefore, if you are planning on buying one of these Alinco Radios - Beware!

Why is this being posted to so many news groups? I've seen nothing in this thread dealing with antennas, boatanchors, digital communications, equipment, homebrewing, or space communications. The only thing related to DX are slams against those who call CQ DX or chase paper. Are you seriously interested in exchanging ideas or just trolling?

Dan,

Take a look at http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I'm not sure whether they're in full sheet format, but the diagrams are on
those pages.

73,
Dave

Hello, and thanks for reading this message. I recently aquired an AEA Radio Link and am trying to get the downlink transmiter side (female 8 pin din from Radio Link) wired to a Kenwood 2M 241-A Moble Radio. If there is any technical help available, I will be happy to pay some money to get this thing wired and running! Knowing what jumper positions J5, J6, & J7 are, the actual pinout from the female din(Radio Link side) and the plug for kenwood 241 (Mic Jack) would an invaluable service! Please call Orlin at 909-517-1107 or email orlin@calserve.com .

Thanks, and 73's

Orlin...

I am a new ham that has learned fast. I purchased an Alinco DR-610-TQ mobile from a local retail outlet that offers a 30 day return policy...that's why the local Ham Store does NOT get my business! The offsets + and - as well as the rest of the display characters were so small, you could barely see them. I returned it for a full refund (and also realized the error of my ways in forking over $569.00 for a VHF after hearing what goes on...or DOESN'T go on on 2 meters..breaker one-nine anybody?). I also recently returned an Alinco DX-70-TH. $1000.00 is too much for a mobile sized HF that does very little. Nothing against Alinco per se....I have a DJ-191-TH (HT) that I love....easy to use and large display....$169.00. THIS is all 2 meter is worth in my humble opinion. I use it as a base, mobile and portable. All I need is a good (simple) HF rig (like the Alinco) but closer in price to the $50.00 worth of circuit boards that it cost to manufacture!!
I would never spend big bucks on ham equipment w/out a return and guarantee policy. Thank goodness for the local retailer. BTW, my local ham shop offers neither and is VERY rude, whether you are a tech or an Extra...and everybody I know feels the same way...too bad.
I am in love w/CW HF but very disillusioned with prices and equipment...I guess I'll keep looking for a Reasonably priced used rig...but many of these are way high when u don't have Any guarantee of operational condition or longevity. A crystal and a few wires...that's all I want. In contrast one can buy a used AIRPLANE (complete with equally complex radios and avionics) for $8000.00! How much did YOU spend on ham equipment???? No profit for the manufacturers...don't feed me that line, please.
P.S. "CODE FOREVER". (that needed to be said...again!...)

My first station was a Heath DX-60 with a Laffayette KT200 receiver. Alas, 80 meters covered a scant 1/2" of the dial, and no contacts were ever made. Luckily got my technician license before the one-year novice ticket ran out, and continued having fun on VHF with a Twoer and Sixer for many years.

Folks,

I agree that the ICOM W32A is a great radio. I've had mine for a couple of months now, and the only thing that I can find wrong with it is the fact that it gets pretty hot when used on high power for a while. I've also heard that this is pretty inevitable with any small-sized high-power (5W) rig. Luckily, it has a 0.5 W setting for both UHF and VHF, and for most purposes this is sufficient. For high power operation, the external mic is a nice accessory. The one from Radio Shack is actually an ICOM unit (as is the HT-202), so it works fine and is a lot cheaper than the one you can order from ICOM.

If you really believe that then why do you continue to harass me
& make up your outlandish stories such as your kicking me off of
a few fidonet echos?

> Prove it John. Marge has stated that you are incorrect, and she
> does not have any idea where you came up with it.

I have asked you to prove this by having Marge send her denial
directly to ME (not thru YOU) but you can never produce!

Blake my challenge to you to prove Marge's denial still stands. If
she is as stong as you claim about it then she would be willing to
state her denial directly to me. Instead, we only hear you claim
she told YOU (and no one else but you) of her denial!

> Nope John. I have no desire to see you infest yet another newsgroup.
> None of this had anything to do with HAM radio.

YOU were the one who started mentioning the ham radio related fido
echos. You want to avoid this spilling over into the ham radio
newsgroups because you know the hams on the internet are smart enough
to see thru your lies.

I got my novice in 1974 at the age of 15 and my first rig was a Johnson Adventurer 50 watt CW transmitter with a Johnson VFO with a Heath HR10 receiver. I got the transmitter and VFO from the local ham who administered my novice test (in those days novice tests were given by another ham at his house) and I bought the Heathkit new. I used a 40 meter coaxial fed dipole on 40 and 15 and my first QSO was with a station in Maryland.

Shortly after that I picked up a Hallicrafters HT-40 tx, SX-140 rx, and HA-5 VFO (I think that is the correct numbers). It was Hallicrafters novice rig. The receiver was much better than the Heathkit and, besides, it was a matched set and looked cool.

So, although that wasn't the rig I started out with, that is what I think of as my novice station. I wouldn't mind picking up another one of those sets.

Thanks for letting me replay some memories.

Tom

To: ALL SPREAD THE WORD, WE NEED YOUR HELP!

NCI strongly encourages the NCI membership to file comments with the FCC on the open Notice of Proposed Rulemaking, WT Docket No. 98-143 which addresses the restructuring of Amateur Service license classes and asks for input on the future role of Morse Code testing as a license requirement. (See details on how to electronically file at end of this bulletin.)

In filing your comments, the NCI Board of Directors encourages NCI members to minimally include the following points. (It is beffer to comment in your own words.)

NPRM, WT Docket No.98-143, Section E, Telegraphy Examination Requirements, paragraphs 19 to 25.

1. I agree with the FCC's assessment (NPRM 98-143 Para. 19-21) as to the decreasing role of Morse code in contemporary communications.

2. I believe the use of Morse code by amateurs is now totally within the confines of recreational purposes only.

3. I believe that there is no longer any public/governmental interest served by requiring code testing.

4. I believe, therefore, that ALL testing of Morse code should be ended.

5. I also recognize the existence of the international Radio Regulations, Article S25.5, (NPRM Para. 22) and suggest an interim requirement of ONLY a single code test with only the minimum speed necessary to meet international treaty requirements, but in no case, more than five (5) WPM for all HF license classes until such time as Article S25.5 is deleted.

6. A single minimum code speed examination would also eliminate the need to grant medical waivers to disabled amateurs for the higher speed telegraphy requirements. (NPRM Para. 25 and RM9196)

7. I suggest that any interim code requirement used to fulfill the international Radio Regulations, Article S25.5, be wriffen to include language that would automatically end the interim code requirement within three (3) months or less of the ending/elimination of Article S25.5.

8. As a result of all Morse code testing being 5 WPM and
Juno e-mail printed Wed, 4 Nov 1998 19:58:12 , page 2

considering the small difference in privileges between the Advanced and Amateur Extra Class, I believe only three license classes are needed. These classes would correspond to the current Technician, General and Amateur Extra Class.

9. Additionally, NCI members may consider adding comments to address all of the points in the FCC NPRM.

A copy of the FCC~s Notice of Proposed Rulemaking, WT Docket No. 98-143 can be found on the NCI website at:
<hffp://www.nocode.org/articles/fcc98l 83.htm> (Note paragraphs 35 and 36 of the NPRM.)
You may file your comments electronically by going to the FCC~s Electronic Comment Filing System (ECFS) at <hffp://www.fcc.gov/e-file/ecfs.html>

AGAIN, WE NEED YOUR HELP IN FILING COMMENTS ADDRESSING THE ABOVE POINTS WITH THE FCC. VIEWS FROM THE PUBLIC ARE IMPORTANT.

Fred Maia, W5YI for the NCI Board of Directors

Anyone have any information on the methods used to do propagation analysis?
Like what is the methodology for making the prediction? Surely we don't
just punch numbers into a program and blindly take what is pumped out as
gospel (although even if we did, who cares?....it's not exactly
"mission-critical").

I am just curious as to how it's done and if there are varying methods for
doing it>

What is wrong with free enterprise anyway, anytime someone suggests change, the equipment manufactures are up to no-good! Hey the average age of a Ham is 60, cant program their radios, and most have bad eyesight, I ask will you be able to build your radio with SMT components? They are sure small to see, even someone with 20/20 vision has difficulty! Choice is new blood or Amateur Radio will go the way of the Cotton Gin!

2230. Balloon payload needed in Michigan

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-05 00:00:00 UTC
From: robert@nordhaus.com
Message-ID: <71r964ulb1@nnrp1.dejanews.com>
Source record: 158720
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space

I'm relatively new to both of these groups but it looks like I've found the right places. If my cross-posting is at all inappropriate, please accept my apologies.

Anyway, I am in the Detroit area and I'm currently working on a few zero-pressure balloon designs. I have flown several dozen small (read: exempt from FAA regs) mylar and HDPE/LDPE prototypes, based mostly on commercial designs and experimental solar/IR balloons designed by JPL and CNES (the French space agency).

Now, why I'm posting here. I'm not a ham (yet -- I plan to take the tech no-code exam in about two weeks) but I would like to fly a GPS payload (and anything else that someone would like to supply, like ATV) in a larger balloon. I'm looking for someone in the area who would be interested in providing the payload and downlink. I will supply the balloon, gas and all flight support, as well as meet FAA requirements.

If this is out of line with amateur rules or something, please let me know. This isn't a commercial project, only a hobby (a strange one, according to my wife) of mine. My ultimate objectives are two-fold: one, to create a low-cost lift vehicle for a rockoon type mission (that's another story) and two, to create a long-duration infrared montgolfiere vehicle for research purposes. I see the latter as being a great platform for a repeater, allowing flights that last for weeks at a time.

If you are interested, please drop me a note. Thanks (and I hope to join you all on the airwaves sometime soon)!

|It's because of the people who didn't vote that Bill Clinton was elected
|president the first time.

Bill Clinton was elected the first time because of H. Ross Perot! Perot took about 18% mostly Republicans who would have voted for Bush if they didn't have Perot to give their vote to so... nobody got a majority of the vote. And that was the cry of the Republicans for the next year "he doesn't have a mandate!"

Yes Blake!!! I am not surprised!!!!! You have always lusted
for power & done ANYTHING you could do to try to make yourself
look better than me. LONG AFTER I left Fidonet you came
to a position where you were in control of the Fidonet echos you list
above & others. Then since I WAS NO LONGER ON FIDONET for several
months
you suddenly claimed that I had been kicked off of those Fido echos.

Funny how YOU are the only one who knew anything about this.

You had to wait until after I was off of FIDONET to do this because
you couldn't have pulled it off if I was still there!

> You keep bringing this up, stating that Marge had to
> take action against me, and neither Marge, or anyone else,

Yes, she did & as a result you were NOT on the echo for about 90 days.

Blake, you seem to want to discuss ham radio type of things
mentioning the ham radio echos of Fidonet. So I cross posted
this to the ham radio NG's. I suggest we continue this discussion
there.

Unfortunately that guy no longer makes the license holders--wish he did, I changed callsigns and would love to get a new one. It's a great "niche market" to make those kinds of things, but probably not enough volume business to remain viable.

Greetings

Our organization has just acquired a small tract of land on which stands a telephone tower that we do not need. It works fine, but is not currently used for communication. Since we don't need it, we would be willing to sell it for a very reasonable price. If you are interested, please contact me at:

I would say have as much fun with radio these days as I ever did. Much the same magic and thrill is still there as when I was a Novice in the early '70s. I did drop out of ham radio for quite a few years, and got back into it in 1987.

It was a lot of fun again from 1987 to about 1995, at which time I started to get a bit bored. As much as I sometimes like the modern equipment, it seems there's something missing. In 1996, I rediscovered vacuum-tube rigs, and I have been enjoying ham radio very much since then. About 80% of my time is spent restoring, maintaining, and operating boatanchors, and I get a lot of satisfaction out of this activity. I do have some modern equipment, and it has its time and place, but I think I would be much less active in ham radio if it weren't for my boatanchors. They really help bring back the magic and excitement of my early ham radio days.

73,
Jeff, KC1MK

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors

I got my Novice in 1971 at the age of 13. My parents bought me a Realistic DX-150A receiver several months before that, and then bought me a Heathkit HW-16 when I passed my Novice test. I really had a blast building that rig! I had a few crystals each for 80, 40, and 15 meters, and had a lot of fun as a Novice. My parents occasionally bought me Heathkit test equipment, which I very much enjoyed building and using.

I dropped out of ham radio when my Novice license expired, as I got more interested in other things (guitars and amps, stereo equipment, cars, and girls). I got back into ham radio in 1987, and have been thoroughly enjoying it pretty much since. A few years ago, I was started to get a bit bored, but I happened to buy a Drake 2B receiver at a hamfest, and the boatanchor bug bit me hard. Since then, my main interest has been restoring, maintaining, and operating vacuum-tube equipment. I have some modern equipment, and it does get some use, but I spend most of my ham radio time playing with my older equipment, mostly Drake and Collins. For me, the older equipment provides the real fun and challenge that keeps me interested in ham radio. When I'm using a nice old radio that I have restored and maintained myself, I get every bit as much enjoyment out of ham radio as I did in my Novice days.

It was definatly more of a challange. No fancy digital read-outs.
No transceivers. Except for the pricey Collins and Drake equiptment,
which most of us could not afford, most rigs where not very sensitve
or or accurate. It was a common rule to stay away from the band
edges, since most receivers where only good to +- 5khz (kc then)
at best and drifted quite a bit. Sideband was quite new on HF
and (at least where I lived) no used at all on VHF.

I do admit that I sometimes romantisize "The Good Old Days", but
the reality was that most equipment was not very good.

The really neat thing was, that one could build and/or maintain
his or her own equipment and did not need to be well versed in
PLL and digital engineering.

Great reminiscences here.

I got my novice, WN4CIE, in 1966 at age 17. Didn't have much money at all, so I used a Heath GR64 general coverage reveiver. As I recall the kit cost me about $40 and was your basic as-simple-as-possible superhet with a regenerative IF stage for receiving CW and SSB. The transmitter was a hombrew, a single stage xtal controlled osc using a TV sweep tube, ran about 30 watts. I used to tune it up with a 60 watt light bulb connected to the output jack.

The antenna was a 40 meter dipole that was given to me by a fellow ham. He had cut and tuned it for a very low SWR in the novice band. I strung it above the roof of our house, which had a tin roof. I have no idea how that affected the antenna, but I managed to work 48 states with this setup. One of my most memorable QSOs was the night that I worked Hawaii on 40 (I was in Florida). Never did bag Alaska or Idaho.

What a lot of fun that was. Makes me wish I was 17 again. :-)

I eventually got my general as WB4FRH, and I let it expire after the first term of 5 years because of life changes and other things. That was 1972. I've just recently gotten back into amateur radio. A lot has changed, to be sure.

A couple of comments. First, the equipment of the "good old days" wasn't that bad. Yes, frequency measurement was a problem, but that is easily solved with modern technology. Overall, however, the old receivers and transmitters perform quite well. What is really fun is they are readily available, are not hard to repair and maintain, and modern test equipment (such as your fancy solid state transceiver as a frequency standard) is readily available. They can be made to perform as well, and they sound better than most modern transceivers. We have the best of both worlds!

Work with the older sets provides a good foundation to jump into the world of PLL and digital engineering. Not from the technology standpoint, unless one is completely alien to the analog world, but from the expectations standpoint. One knows what he is looking for.

My first QSO CW contact was with a Californian ham with the same surname!! Wow. My first rig is (and was) an Alinco DX70TH...a very simple rig with an ineffective filter. Just EXACTLY what I wanted to start out with, but NOT for 1000.00!!!! It goes back tomorrow for a refund. I will be looking for an old used rig, just enough to get me out there. The price of new radios...even simple ones...is outrageous...and they do no more than a "build your own" did in 1965, i.e. transmit and receive...that IS what it's about?
I also have an Alinco DJ191 TH (HT) which is used mobile and base. Vry disappointed with 2 meters. About as exciting and worthwhile as CB...will not be spending big bucks on this band. (I actually heard a no-code tech on the air last night trying to tell a newly licensed youth (12 yr old) NOT to pursue code and not to listen to everybody that says he should! I guess it made him feel good about his own lack of the desire to improve his own skills). My opinion, but HF CW is what ham radio is all about. Oherwise, get a cellphone. All the best.

Atlas 210X, November 1993.

My brother had abandoned the rig in my room a few years
earlier, and figured I'd be able to understand how the
lid came off and the 10 meter oscillator coils could
be adjusted. It took me a while....

About the time my Novice ticket came, I figured I should
put the coils back where they belonged.

The rig still has my old call stuck to its front, long
after it earned me WAS 40 phone.

I got my second rig a few days after the first VE test session
held in town -- a Kenwood TH-21AT 2 meter HT, one of the first
miniature handhelds. I don't know what was more fun -- the radio,
or riding my motorcycle back from the candy store in San Antonio
at 110 MPH, racing with Corvettes.

Greetings,
I was wondering if former Senator and again in space
astronaut John Glenn is an Amateur Radio operator. My guess is yes, being
an astronaut and all. However, I just wanted to make sure (or have someone
say otherwise) before I would say that to others. I am planning on making
a chart of some famous hams for an info table in the Student Union here at
UB.
Thanks,

Noah KC2DVT, president UB ARC

another example of trolling how to "protect" the amateur radio by
trying to make looking of amateur radio superior. it doesn't work.

Masa, if you dislike amateur radio so much, why do you bother reading these newsgroups? Why not do something you do like? Your contributions here are *all* negative.

And if you *must* contribute, writing 2 lines of content embedded in 40 lines of quotes and irrelevant signature is a huge waste.

Dave

|You've made the same error as others. Let's look at an example to
|help you understand: When you were born, no one referred to you
|as being zero years old - you were said to be in your first year
|of life; that doesn't negate the fact that during your first year
|of life, you *were* zero years old. After those first twelve months,
|you turned one year old, and were then in your second year of
|life. When you turned two, you were in your third year of life...

|The first twelves months of the Gregorian calendar marked its first
|year, i.e., the year zero. Unless you can present a reference that
|explicitly states the claim you've made above, you do stand corrected.

That's just flat out wrong. We do not call the first, year zero. There was a year we now refer to as 1 BC then the very next year we now refer to as 1 AD. There is NO YEAR 0! This has nothing to do with what they called these years at the time.

Year 1 is the first year of the first millenium.
Year 100 is the last year of the first century (hundred).
Year 1000 is the last year of the first millenium (thousand).
Year 2000 is the last year of the 20th century (hundred) or second millenium (thousand).

Hey Cecil - I'm rebuilding a Globe Scout Model 65A (that's the
one with 160-10m coverage). It's really a mess - there were so many
modifications done to it over the years by its various owners that it
doesn't resemble the original wiring at all.

My first station consisted of all Heath gear: DX-60B transmitter,
HR-10B receiver, and a Two'er to listen to the country's first
repeater, the K6MYK AM machine in L.A.

Walter's good old Beer Hall Putsch marching music!! I have yet to hear any single-sideband
station in ham land with finer
High Fidelity and crisp, clear audio. This guy Walter must be using some very good mixing
equipment, properly coupled to
either the audio line like the broadcast stations do, or he must be using a Senhauser or
equiv high end microphone. When I
hear ole Walt fire up that great Second World War era German marching music, I almost want
to put on my trench coat and high
boots then goose-step all around the radio room - Seig Heil!

> Who was the worst Liberty Net Member, based on thier contrbutions to the net?
> 1 K4GAR - "media monitor" tapes
> 2. Harvey's monotone reading at 3rd grade level
> 3. Andy's foul mouth

That thar's a tough one! I give it a tie between Harrison's seemingly endless ranting and
tape playing, and Harvey
Wallbanger's dottering, alzheimer induced readings from the very dusty Book of Selected
Writings of Senator Eugene McCarthy.
Given a choice between hearing these two and watching railroad videos for 5 hours at the
next train show with railfans who

bathe once a week, I'll take the video of yet another redundant photo-op runby of the Nickel Plate Road 1825
(Snore......Snore.....)

In 1957 I graduated from several homebrew super regenerative receivers to a National SW-54.
Upon learning the code and getting a novice ticket, I bought a Globe Chief XMTR (single 807, Xtal controlled) and "ruled the world" with the rigs!

Got so hooked on operating that I started skipping school to "catch DX" and, on one memorable occasion, my Father came home to find the rig "hot to the touch" and me hiding in my bedroom closet!

Most memorable contact with that rig was when I had a contact with a Puerto Rican station (I was at Satellite Beach, FL) during a hurricane.
The signals were marginal on both ends which, to my amazement, turned out to be due to my having DISCONNECTED MY ANTENNA TO AVOID LIGHTNING! I was on 15 Meters loading about 10 feet of RG-8 but still Q5 in San Juan!

A hobby that provides many memories!

An 807 is a common final tube from the 1950's. It is a six volt version of a 1625 used in WW2 Command set transmitters (a common surplus Xmtr used by thrifty hams, often converted to SSB exciters when that mode became in vogue).

Often times hams would refer to "having a few 807's" as a pseudonym for "having a few beers".
The phrase is one I have not heard for many years!

Sadly (but predictably), that's what happens when a service department
is turned into a "profit center".

Radio was certainly fun in those days. That was mostly because
we were clueless and everything was an "Ah Ha!" experience.
As we learned more, those "Ah Ha!" moments became somewhat
less frequent. For me, there was a period of a few years that I
liken to the sophomore experience. That is to say, I thought I knew
it all, and there were no "Ah Ha!" moments. Amateur radio didn't
seem very interesting then. But now as I've grown older and gained
a greater appreciation of just how much I still *don't* know, those
"Ah Ha!" moments have grown more frequent again.

There is so much to explore, so much to learn and do, there's no
way one can become bored or blase. Thanks mainly to modern
technology, we can now attempt things that were unthinkable in
the old days. That stretches the mental muscles and lets us
experience again those "Ah Ha!" moments when we finally
figure out how to do something new and different.

When we were starting out, that something might have been a
simple oscillator or antenna. Today it might be the logic behind
forward error correction, the nature of improved modulation
design, or the electromagnetics underlying antenna behavior.
But in any case, the fun has always been that moment when
the light bulb goes on and you suddenly have an insight into
how it all works. That's the best high in the world. For me it is
the heart and soul of what amateur radio is about.

I've never been more excited about amateur radio than I am
today. I bubble over with new ideas and new things to try. And
today I actually can try them because technology has advanced
so much that I can prototype an idea using functional blocks in
a matter of hours instead of becoming mired at the mundane
discrete component level and giving a project up as too complex
as I often did in earlier times.

In 1966 it was a huge thrill to watch the sun noise rise and fall
on the chart recorder from my first UHF tube receiver (WE416B
preamp) and homemade yagi antenna array. That was the payoff
of months of work. Today, I get a kick out of throwing together a

setup in a few hours to measure the doppler as Lunar Prospector
orbits the Moon, or when my little QPSK DSP setups make an
error free contact on 30 meters when I can't even hear the signal
in the noise. I know I'm doing something that even the professionals
considered a dream in the days when I started out. VLSI and
computer power have opened entire new realms of radio for us
to explore and conquer.

Hi there.....

Have been reading about this little radio.

Does anyone who has one care to comment on it? How are things like the sensitivity, audio quality, etc?

Also was wondering what happens if the batteries go dead....how long before you lose the frequencies programmed? Can you program channels in separate banks, or do you have to scan the entire lot at once?

Thanx in advance

John

I give as reference that most prolific scholar, Isaac Asimov. In his book "Beginnings", he devotes part of a chapter to the development of the calendar. Each new century starts with a year ending in 1, and each new millennium starts with a year ending in 1. The year before year 1 AD was the year 1 BC, there was no year zero. The notion of zero was an Arabic invention not yet established in the West when Charlemagne imposed the idea of a calendar dating events referenced to the birth of Christ. Year 1 day 1 was the first day after the birth of Christ.

Quoting from the World Book Encyclopedia, "Century ordinarily means 100 years. The word is from the Latin centuria, meaning a hundred. The years 1 through 100 after the birth of Christ are called the first century; from 101 to 200 was the second century. The present century is the 20th century." 1900 was the *last* year of the 19th century and the year 2000 is the *last* year of the 20th century. The present century

will end on December 31, 2000. The first year of the 21st century and the new millennium will start on January 1, 2001.

Of course as I noted, Christ was actually born in 4 BC (749 AUC), so the new century and new millennium actually started Jan 1, 1997, but we choose to ignore that because the calendar is so well entrenched that it would be futile to attempt to correct the mistake of Dionysius Exiguus at this late date.

Note also that the first day of year 1 was supposed to be the first day after the birth of Christ. The notion that Christ's birthday is Dec 25 comes from medieval christians highjacking the winter solstice festival from the pagans. (The solstice is actually Dec 22, of course.) If we did things correctly, Christmas would actually coincide with New Year's Eve (but that would spoil a good party, so we don't).

Actually, things are more complicated than that. Up to 1580, the calendar had a leap year every four years (introduced by Julius Ceasar, and hence referred to as the Julian calendar). That put the year out of alignment with the seasons (and the solstices, and Easter). To put things right, in 1580 Pope Gregory XIII deleted 10 days from October and started the practice of dropping leap years from the last year of centuries which are not evenly divisible by 400. That keeps the calendar in sync with remarkable accuracy. This led to riots as people clamored in the streets to "Give us back our 10 days." That was because they had to pay rent for the entire month of October but only got 21 days for their money.

England, having repudiated the pope's authority, didn't change to the Gregorian calender until 1752 and had to drop another day (and correspondingly had worse riots). That makes some of our Founding Father's birthday's, such as George Washington, fall on the wrong date since they were born under the Julian calendar, but we live under the Gregorian calendar. (Of course that's a moot issue today with the advent of President's Day Monday holidays.)

Now aren't you glad you asked for more information?

An 807 is slang for a beer because of the resemblance of the envelope
to traditional beer glasses. On a related note, a 1625 refers to malt
liquor, and an 813 is serious whiskey. :-)

2273. Re: LACFD vs Amateur radio follow up info.

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-06 00:00:00 UTC
From: snyder@ecom.net
Message-ID: <3642a412.43932605@news.ecom.net>
Source record: 158636
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

>The LAFD has decided that it is above the law and that the public interest
>can be best served by taking an anti-amateur radio position.

>Privately, the LAFD is working for the elimination of all amateur radio
>operators.

Really! Here we go again. This is one of the biggest problems in amateur radio: preposterous accusations and personal attacks that all too many amateurs choose to believe as gospel truth.

Khalil is attacking not only the Los Angeles City Fire Dept, but is leveling accusations of criminal misconduct at living, breathing individuals within it. He has harassed an uninvolved LAFD public service officer by spreading his personal e-mail address across the `Net. These are people whose reputations can and will be damaged by this sort of thing. It can undermine the efforts of a city that has finally started integrating radio amateurs into its disaster planning. I hope he has considered carefully what he is doing.

Note how fuzzy his facts are. It would be quite interesting to see the entire picture, fairly presented. But methinks this will never happen.

In the interest of fairness, I asked Khalil two weeks ago to provide some reasonably clear evidence (not "fuzzy facts") that the LAFD and other named individuals are out to get radio amateurs. He has not responded.

If (and only if) the accusations Khalil has made turn out to be honest and true, and the facts are exactly as he has stated, I will be wholeheartedly on his side. Fair enough? Until that time, it looks a lot like another loose cannon on the decks.

--
Bill Snyder

PS: When J Angus posted this Khalil follow-up, he used LACFD in the subject line. LACFD is widely accepted as meaning Los Angeles COUNTY Fire Dept. The LA City Fire Dept generally goes by "LAFD". Now even the county is being drug into this sorry affair.

2274. Anyone know about Page Maker 8 (UNIPAGE).

Anyone know about Page Maker 8 (UNIPAGE). We use PageMaker 8 (produced in MOTOROLA) as paging terminal and progam "Console 3" for control this unit. But we can not find "Console 3 reference Guide" or Instruction proraming paging terminal. We very need this discription. We have only "Page Maker 8 insallation Manual Ver 1.0 This product made in Canada Industry. We request sent to our comany location this documents, please. Our request to distributor MOTOROLA in Russia - do not result.

Best regards!
Sorry english.

No, it is just what happens when the supply of obsolete parts runs out.
Drake has supported their old equipment longer than anyone should
reasonably expect. It seems that they must have over-bought spare
parts inventory a couple of decades ago. Now it is finally running out,
and they can't get any more.

Many of these sets were made well over 30 years ago, and by a quite
different company from the one that now owns the name. What greater
duty do you feel they owe to owners? I believe that they can do
their best only if they by keep profitable and stay in business.

I got the first Novice issued in state of North Dakota on July 23, 1951. I had a 6V6 crystal controlled oscillator (about 6 watts input on a bread board from article in ARRL "How to Become a Radio Amateur". Receiver was a BC454 surplus army tank receiver that covered 3 to 6 mHz and had a selectivity of about 1 mHz also. But then their weren't very many others on the 80 meter CW band. Called CQ for almost a month before I even heard another Novice. My first contact was with an Advanced (Old Class A) station in South Dakota -- I thought I had made DX contact with that distance!!!!!!!!!!!!!!!! Wï¿½EBA (ex. WNï¿½EBA)

You wouldn't want to give any information on the tower or even on your
general location, I suppose. That would make it too easy.

SB PROP ARL ARLP045
ARLP045 Propagation de K7VVV

Solar activity was up for the week, but down over the past month. Average solar flux for July through September was 114.1, 136 and 137.7, and only 117.3 for October. But conditions are definitely looking up over the past week. Average sunspot numbers jumped nearly 40 points to 84.7, and average solar flux increased about 17 points to 125.8. The really great news is that solar flux has been climbing rapidly this week. It jumped suddenly to 151.8 on Tuesday, and then on Thursday the three readings for the day at Penticton were 146.9, 152.7 and 158.6. The noon reading at 152.7 is the official number for the day.

This weekend could have some interesting conditions for the ARRL CW Sweepstakes. Solar flux is expected to remain high at 155, 150 and 150 for Friday through Monday, but the planetary A index for the same period is expected to be 12, 24 and 32. This is due to some solar flares on Wednesday and Thursday of this week. High K index numbers of four or five or higher will make it harder to pick up KL7 and VE8 multipliers in the weekend contest.

Beyond the weekend look for more unsettled to active geomagnetic conditions from November 14-21, with the worst period around November 15-17.

The high solar flux has made the upper bands interesting. The author has been operating mobile on 10, 15 and 17 meters, and has been working the world during the daily commute using low power and a simple mobile whip. 17 meters has been particularly fun, since the higher frequencies often aren't open yet on the west coast during the early morning drive to work.

Sunspot Numbers for October 29 through November 4 were 81, 81, 71, 79, 76, 81 and 124 with a mean of 84.7. 10.7 cm flux was 109.5,

111.5, 118.7, 121.4, 126.1, 151.8 and 141.4, with a mean of 125.8,
and estimated planetary A indices were 8, 5, 5, 3, 5, 5 and 5, with
a mean of 5.1.

I recently applied for a vanity call sign. I'm curious with regard to how long this process will take. I applied via the FCC web site. What's the average turn around time?

I check the on-line database and no one with name of John Glenn holds a ham license.

He probably couldn't pass the test anyway!

As I recall Drake stopped making the -4 line sometime in the mid to late 70's. The -7 line lasted into the mid 80's I believe. I'd have to look back thru my old HR and QST's to know for sure. But it seems to me they serviced their out of production equipment much longer than Yaesu, Kenwood or even Icom. Anyone have experience trying to get service from the manufacturer on an 80's produced rig from one of those guys? Remember the talk about Icom rigs firmware that couldn't be replaced...once the rig lost it's firmware you was done for? Wasn't that the IC-745?

I suspect the reason Drake is discontinuing service is the people who knew how to do the service are retiring and no one can fill their shoes. Drake was a great line of amateur gear and the company has maintaned it's ties to the amateur community for a long time. They will be missed. But their rigs will keep going.

They will indeed be missed. With apologies to TenTec, MFJ, and others,
wouldn't it be nice to see a true American ham gear company again, one
that could compete head to head with the Japanese companies? I wish
we could bring back Hallicrafters and National, but with modern designs.

Great answer. It should be kept and posted as a standard reply to those hams who say amateur radio is going down the tubes and we are all now appliance operators. I maintain that homebrewing is no more difficult now than it was in the 50s or 60s. It is just *different*.

Why apologize? Look inside those products and find the foreign parts.
The switching power supply I bought from TenTec that goes with the Scout
was *completely* made in Taiwan.
But what's the big problem anyway? The US sells many products to foreign
countries also. Whats good for the goose....

Trying to find an old frined who lived in Clarksville Indiana around 1979. Name is Bill Skinner and the last call he had, I think was N9DCN. Before that KA9BVY or KA5BVY. Know he had both a 9 and a 5 call. He was an EMT with a local ambulance service.

I don't have access to any old call books so I can't trace his call or address. QRZ lists too many Bill Skinners for me to contact. Wife's (non-ham at the time) name was Judy.

Any information is appreciated. E-mail me at KB9KEB@webtv.net

2298. Ford radio tuning problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-06 00:00:00 UTC
From: Koen <kuilenbk@worldonline.nl>
Message-ID: <36436223.90A4C510@worldonline.nl>
Source record: 158661

Some weeks ago I visited an oldtimer fair. Someone offered unused
radios, marked Ford, probably coming from USA.
I bought one and next I built it in in my car and tested it: good sound.

After some time I discovered a problem: for FM it appeared not possible
to tune on all stations: it could only be tuned on a frequency of 87.1
MHz + multiples of 0.2 MHz (87.1, 87.3, 87.5 MHz.....).
In our country (Netherlands) however the stations are separated 0.05 MHz
(87.05, 87.10, 87.15, 87.20).
My question is:
Can I change the properties of this radio and how (via buttons, jumpers,
solder?).

Some further information:
The right hand side contains a sticker with the following information:
F4SF-19B132-AB (probably type identification).
94 11 (probably production date).
Ford MEHA103221 (barcode sticker).

The motherboard contains 2 large chips:
IC701 (40 pins): Ident: N7600220 FKC004 (1992 Ford M).
IC851 (28 pins): Ident: ST 70029SB (R22AC).
Remark: the place for the crystal seems to be empty.

Senator Glenn is not a ham, although I'm sure he could pass the test quite as handily as anyone else. You might note that of the 10 entries listed on qrz.com, none are from Ohio, Senator Glenn's home state.

I nervously took my novice in late '61 from my Elmer and
sometime employer at the tv shop, Don W8FBX.

In December 61, conveniently just before Christmas, my
ticket arrived with call WN8BRS. Took my xmas money to
downtown Detroit's Reno Radio, where the beautiful, used
Eico 720 I pined for became mine. Used the 720 on novice CW
along with a Heathkit AR-3, which was hopped up with a
Q-multiplier. Like some other posters to this discussion,
I also used my 2 meter Novice phone privilege with a borrowed
2-er lunchbox and Cushcraft halo. After passing General (WA8BRS)
in fall 62, I got the Eico Plate Modulator (722?), and the companion
Eico 753 VFO. I also was able to join fellow East Siders on
160 AM with a converted ARC-5 from Silversteins surplus.
Later got a Heath SSB Generator and ticked off the locals on 160
by being (along with other teenage radio hooligans) one of the
earliest "donald ducks" on 160 SSB in my area.
Upped the receiver capability with an RME 4350/SSB adaptor/
preselector combo.
Had lots of fun checking out the used equipment shelves at
the various ham dealers that used to exist here, and going
to club meetings to swap equipment and find parts.
It's still fun to realize that a shoebox-sized piece of gear, using
less power than a toaster, and without assistance of international
communications cartels, provides a "natural," earth-assisted means
of sending my signal around the planet.

Hmmm, was this your private residence or are you renting? Did your landlord give some OK to the LAFD to remove the ants? I have seen many amateurs rooftops look like a large rodent has nested up there. It sounds like your antennas may have been a hazard to the LAFD if they had to respond to a fire. If I lived in a building with something on the roof that would prevent the fire dept from saving my stuff, I would probably cut it down myself. It sounds like there is something your not telling us......M.

The city of Lafayette Indiana is going to pass an ordinance
that will allow them to enforce all FCC regulations. It is patterned
after an ordinance from Wisconsin that has passed review by
the courts.

The danger is that this is what the Federal government wants.
If they can get the local governments enforcing federalize regulations
then they can write the rules but make the states and local governments
pay to enforce them.

The better way would be to encourage your congressman to
allow the FCC to keep all fines that are collected from violations
of FCC rules.

Lafayette's web page is: http://www.city.lafayette.in.us/

You can mail the mayor, Dave Heath at DHeath@city.lafayette.in.us

The ordinance will be discussed by the city council on Nov. 16th.

> load i have check
> the menu for and defaults cahanges but nothing is makes a difference any
> help
> TKS AL K4vhv

It sounds like a defective auto tuner board. It works ok in bypass but
not when inline. There is a menu setting that makes the receiver direct
all the time. If that clears up the receiver problem that would help
verify it. In any case since it's new then don't mess around inside so
as not to void the warranty. Let them fix it.

2309. W9ART "Jammer of the Year"

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-07 00:00:00 UTC
From: dx302man@aol.com

Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.antenna,alt.ham-radio.marketplace

FOR SALE : Rohn 25G tower system . All sections are down, straight, and rust free. Tower was up about for about 2 years and has been down for 1 1/2 years in dry storage. The package includes:

1 top section with TB-3 thrust bearing
7 ten foot sections
1 ten foot section that was cut off
(used as bottom section in concrete)
2 sets of torque brackets (for guying)
Various sections of guy wire
Assorted insulators, clamps, and turnbuckles

Asking $675 buyer picks up. Any shipping is extra. Guy wire will not be shipped. Located in SE Pa.

Will consider partial trade + cash. Looking for an HQ-180A/C, TM-241/51/61, and/or an AC-4. All trade equipment must be in very good condition and fully functional. No junkers/smoker's radios please.

Call Gene at 610-831-0868 until 10 PM eastern or email at eugeneb@nni.com

Thanks.

2322. Dual-Band in 96-C4 Corvette working FB

TNX to all that responded to my help request for installing a radio
in a Corvette. All accomplisied and working FB

- TM-733 mounted on dash next to key
- Tucker thru-the-glass dual band on front windshield behind mirror
- Power taken from assessessory wires provided by GM in the
center console. Really cool that they provided three wires
- Black Ground
- Orange 12 Volts
- Pink 12 Volts Keyed

Works great! Thanks to all that answered my posting.

I recently purchased a used Icom IC737 which appears to have a fault on the tuner board. I have replaced the diodes and chip as recommended by Icom but to no avail.

Does anyone have a copy of the service manual for the 737 and if so could they please fax me a copy of any pages relating to the tuner section. I would be particularly interested in any test points, voltages etc.

My fax number is 519-839-5360.

Many thanks,

Larry VE3YET.

Well, you've made it obvious to us that history was not one of your
favorite subjects. But for the rest of us, we do study history so as to
insure that past mistakes are not repeated. For example, I doubt if we'll
ever see the FCC take away an HF ham band and use it for the creation of a
license-free radio service...

One HF band in particular has surely dropped in quality since 1958
when it was given to citizens: 11 meters. For its first 20 or so
years, operators using it were required to be licensed (non-Morse).

This pretty close to my first station. I had an AR-3 but I never used it once I was licensed. While waiting for my ticket I obtained an HR-10 that served me well during my novice career, One of the transmitters was a 720. I also had several homebrew rigs built with parts salvaged from discarded television sets. All worked to varying degrees. A large knife switch did the t/r to various wire antennae thru a homebrew tuner.

DX was pretty good on 15 mtrs, I worked over thirty countries missing WAC by way of Asia. Ten mtrs didn't provide much DX but I could work anything I could hear. My most memorable novice QSO was with a Michigan ham working SSB portable ZF on the high end of the novice segment. He was calling novices and listening from 21.1 up.

I'll never forget my sole eight meter frequency, 3747 kcs. During my novice tenure I only met one other novice who had a crystal of the same frequency. Working split was a way of life, I was among the last novices restricted to crystal control.

An amateur in Lubbock, TX put up a toweer that conflicted with the local codes. His installation was red-tagged and an order was issued for him to remove it. He argued his case (through ARRL lawyers) that he fell under federal rules which superceeded local law and won. The rules state that no one shall damage an amateur station.

Hello,

I have a Radiotron Designer's Handbook 4th edition forsale. It is published in May 1968. As far as I know this is the last edition of RDH. There are 1498 pages total. The book is in very good condition i.e. the binding is solid, no tearing pages, no missing pages. There are very light wears at the edges of the cover. It also comes with dust jacket(shows some wears).

I am asking for $118(shipped). If interested, please send email to yulius@ecn.purdue.edu.

Best regards,

Aristo Yulius

For what it's worth, I bought a DR605 back in May and have been very happy with it. Yes, it lacks a few features, like no air band reception and it cannot memorize the power level in the memories, but for the buck - it's a great value for a true dual band radio. And xmit/receive performance (as well as frequency accuracy) is as good as anything I've seen for considerably more money!

Just my 2 cents...

This story has taken on its own life and in some iterations, resembles an Urban Legend. I welcome you to read (my) earlier posts in the http://www.dejanews.com archive.

I also encourage those who have a pressing "need to know", to contact *BOTH* the apparent plaintiff (Khalil) and the apparent defendants (his Homeowner's Association and Property Management Company) to hear their sides of the story.

The LAFD has nothing otherwise to publicly to state on this newsgroup regarding a civil matter between the above mentioned parties.

I'm sorry that I cannot entertain e-mail on this matter. Thanks!

My rig is the IC-756. The street lights in the neighbor are those yellowish (sodium vapor?) lights. When the lights fire up at sundown there is a very slow ignition sequence that seems to take several minutes (as many as 10} to bring the lights to full illumination. During this time the noise on the radio is really horrific totally disrupting any qso in progress. The racket settles down after the lights come up to full illumination. Is this just my rig? Is there anything - mod that will help this? Should I leave well enough alone and bite the bullet during the firing cycle?

thank you gentlemen de ... N1MSV gary

Secret reasons for Gingrich resignation.

Friday, November 6, 1998, 9 PM EST

The announcement only hours ago, by Newt Gingrich
that he will step down as Speaker and that he may not
continue his term as Congressman for Georgia's 6th district
follows the delivery at his office of a certified-mail
package of evidence submitted pursuant to the Inquiry
of Impeachment and notification only hours ago from the
Office of Independent Counsel in Washington that my
message to the OIC is being forwarded to IC Starr's office.

Gingrich is my Congressman and I have requested him to investigate
certain issues pursuant to this case and asked that he work with
the Judiciary Committee to bring a witness before the Committee.
This he cannot do. Gingrich takes his orders from the same source
that President Clinton takes his orders: The Council on
Foreign Relations. If Gingrich had followed my request, it
would have resulted in an expedited resignation from the
President facing certain impeachment by the Senate on
better evidence than that so far submitted by IC Kenneth
Starr.

Speaker Gingrich has chosen to take this exit rather than
get involved in an investigation of a fellow member of the
Council on Foreign Relations.

You may review certain parts of the evidence, those which
are not classified, at the website below.

2356. Yaesu FT-901 not transmitting, help?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-08 00:00:00 UTC
From: Frank <frank@mishey.com>
Message-ID: <724g19$gb1$1@news.internetsat.com>
Source record: 158453

I have a Yaesu FT-901DM that recently started transmitting intermittently, and I am not sure what the problem is. If you don't know the 901, it basically is the next step up from a FT-101 and has all solid state components, for the exception of tube finals. Basically the symptom is that everything works normal until I try to transmit. When I key up I can hear the relay kick in, but I notice no power out nor is the needle swinging at all. But if I continue to try to transmit and push the key down maybe 10-20 times, then eventually the rig starts transmitting and will do so until I unkey. But when I try to transmit again then it takes another 10-20 times until I can get the rig to transmit again. I get the same results when using a mic, cw key, tuning switch, and any form of modulation.

So, I thought maybe the power supply was acting goofy and decided to take the cover off and measure voltages in the power supply circuit today, and everything looked nominal as stated in the schematic.

Does anyone have any suggestions, or better yet, has anyone else had such a problem with a older Yaesu rig (901, 101 etc)?

Thanks.

Frank

over.

Ham radio is dying. The ARRL, with their antiquated thinking and "let's keep
it all to ourselves" approach, has done much to ensure the hobby's days are
numbered.

2358. Morse Code machine manual help

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-08 00:00:00 UTC
From: "William E. Clearwater" <wec@interlog.com>
Message-ID: <3645B669.B1216AA8@interlog.com>
Source record: 158502

Hello everyone,

I am located in Toronto, Ontario, Canada and have a small problem.

A friend of mine and a Ham has given me one of the A.E.A. "The Morse Code Machine" for practice in learning code. I have a Bencher key for it as well. My problem is that his son has lost the manual that came with the product. I can utilize most of the products features, however a manual would allow me to fully understand the capabilities of the equipment.

My question is simply this, does anyone have or can anyone direct me to, someone who has access to, or has for sale, the aforementioned manual for the AEA "The Morse Code Machine" model # MM3 ? Unfortunately as you know AEA is out of business, I have tried my local ham shops to no avail,

Any help in this regard would be greatly appreciated.

Thank you in advance for your help in this matter.

Bill

Gosh Masataka, I've been licensed for almost two years now and have
made all sorts of contacts on HF and VHF, and have just recently started to
work UHF (same group of guys that are on VHF though). Don't know why you're
having such problems out in Ottowa but here in the states the 2 meter band is
probably one of the most active and most friendly.
BTW, if you ever do come down to the states, don't call CQ to a
repeater, just announce your call as "listening." With a VE call (I assume)
you'll have no trouble getting contacts...

Message-ID: <724hks$dcp@news.Hawaii.Edu>
Source record: 158508

Brooklyn: 145.23-, 146.73-
(no tones are indicated)

Manhattan: 145.39-, 145.45- (autopatch), 146.67-, 147.00-, 147.15+,
147.195+, 147.27+, 147.36+
(again, no tone seem to be necessary)

That no tones are shown makes me suspicious - in a metropolitan area
area such as NYC one would imagine that the intermodulation products would
be horrendous and that CTCSS would be standard.

Remember, these listings are over three years old.

Where is the FCC and ARRL. You would think by now something would be done to monitor the Amateur Radio frequencies. Locate the wrong doers who continuously jam certain frequencies with poor choice of language and discusting sounds. Incentive licenseing was a joke, and now with the new proposals becoming reality and another step backwards for Amateur Radio.
It wont be long and no license will be required to obtain full privilages on any of the Amateur Radio frequencies. Things will finally become simpified as one will simply purchase a tranciever, choose a handle.

Looking for a copy of a 1968 to 1971 era magazine I believe was called Electronics Illustrated (or similar).

The specific issue I am looking for had an article and schematics for the design and construction of a "morse code transmitter" that had a power ouptut of about 100mw, generated MCW and operated on CB (27MHz) frequencies.

Any help finding a copy of this article or magazine would be appreciated.

Bruce

Within the current regime of government budget cuts, the supremity of individual rights and the burden of proof in prosecutions, it all boils down to a race-to-the-basement. Ask the FCC where they'd rather put their resources... prosecuting Part 97 violations or raking in Giga-Dollars in commercial spectrum auctions.

As for the ARRL, like any other amateur lobby group, they're stuck between a rock-and-a-hard place. Enforce standards that maintain quality on the bands, and the amateur population continues its decline. Loosen standards to encourage growth in amateur ranks and quality on the bands declines. If you're the ARRL, you can't defend the amateur service against commercial interests without the "voters" behind you so the choice is simple... quantity wins over quality because with quantity, you still have something to defend.

So the real solution lies with those of us who bemoan the decline of amateur radio quality...

1) We ALL need to capture new hams as they're learning the hobby and teach them good practices and respect for their privileges.

2) We need to track down the violators ourselves and gather adequate evidence of the gross violations to support a follow-up FCC action.

Rather than asking about the FCC and ARRL, the real question here is how the rank-and-file amateurs are demonstrating their commitment to the hobby by taking a more active interest in building quality within our ranks and policing our spectrum ourselves.

Another one who doesn't get it. The majority of the problems being caused on amateur radio today...jammers, potty-mouths, music players, etc., are NOT newer hams or those with lower classes of licenses. The biggest offenders tend to be those of General class and above who have been licensed amateurs for several years. Don't believe me? Listen to 75m or 14.300/14.313 and tell me who's doing the jamming? It's not the kid down the street with the no-code ticket.

You couldn't be more incorrect. What would be killing amateur radio (if it
WAS really dying) is this pervasive attitude thing....like what you display.

You have the smoking gun in your hand but you always blame the shot on
something or someone else.

If you don't like it then get out of it, or shut the #$^# up.

It was going fine until some of this "new blood" showed up.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, WK3N, KI4RU, KN4T, N6RT, W8CNL, N9AG, K0RS, DJ5AV & DX News Letter, F5NOD, F6AJA & LNDX, G3SXW, G4BUE & DX News Sheet, ON7YO, PA3DMH, PS7KM, SP5UAF, VK9NS & HIDXA and ZL2AL for the following DX information.

3D2, FIJI. Lee, 3D2VA (ex-VP2VE), is active on all bands, SSB/CW. However, Lee is on most mornings on 20 meters between 1100z and 1300z around 14165 and 14226.5 kHz. He was also heard last Friday on 24935 kHz around 2315z. QSL via WA2NHA.

8J, ANTARCTICA. Several bulletins state that the Japanese Antarctic Research Expedition station 8J1RL at Showa Base, Ongul Island (AN-015) is now active. They report that the station has been heard on 21228 kHz at 0900-1000z.

9K, KUWAIT. You only have a few days left to work Bob, 9K2ZZ, because he is leaving Kuwait on November 14th. He has been very active these past few days on 40 and 10 meters. His QSL Manager Ray, W8CNL, states that as of November 5th, Bob has made 162,498 QSOs. Look for Bob to be active on 160-10 meters including all 3 WARC bands on SSB, CW, and RTTY.

A5, BHUTAN (HIDXA trip postponted). Your editor received a letter from Jim Smith, VK9NS, who was planning to go to Bhutan during the last week of October or the first week of November, but the following was reported by Jim: ".... I have reluctantly decided to postpone my planned travel for the time being for several reasons. We have had major problems on Norfolk in the last two weeks involving air travel to and from the island. The mail situation has been terrible to put it mildly. This has been partly due to an extended period of very poor weather conditions. In one 36 hour perriod alone the island had between 12 and 14 inches of rain (depending on location) with high winds and great deal of disruptions

to power and island facilities. All the antennas survived but one tower was almost lost but saved by its safety guying system. We are used to these storms from time to time and there is still much to be done here. There will be some disappointment at this decision however as you are aware this planned visit to MOC was not intended to be a DXpedition (see HIDXA Release) but rather a means of getting things organized for the near future. Many of the donations received were linked to a DXpedition type activity. There is a great deal to be done in Thimphu so that a viable station system is in place and ready to go. It is some years now since HIDXA donated a considerable amount of amateur radio equipment (some 10000 USD) to the Wireless Division (now M.O.C.) as a means of assisting Bhutan make a start. It has been a long and difficult road for MOC (and HIDXA) trying to get the necessary Telecommunications Legislation in place to permit the hobby of Amateur Radio and other Telecomm, related matters. Bhutan has been a long time project of HIDXA as you know..... We will return to Bhutan as soon as it is practical to do so and when I can travel to Bangkok more easily. Will be back in touch with you. Warm regards and Tashi Dalek! (may your journey be a safe one)....."
73, Your in Amateur Radio, Jim VK9NS, HIDXA

BQ9P, PRATAS. Remember to look for activity this week (refer to OPDX.381). The operation will take place between November 12-19th. The callsign will be BQ9P and not BV9P as used in the past.

CORRECTIONS TO OPDX.381. There were two minor typos in last week's bulletin. Under "3W, Vietnam", Coly's (UA0FM) Vietnam callsign should have been 3W5FM, not 3W5FW. Also, under the "Thanks to" credits the callsign US0SJ should have been UA0SJ.

C6, BAHAMAS. Dick, N4RP, plans to be active as C6A/N4RP from Bimini (IOTA NA-48) between November 20th and December 2nd. This includes a low-power all-band entry in the CQWW CW Contest. Outside of the contest, Dick will be active on all bands including the WARC bands. Activity will be mostly CW. QSL C6A/N4RP either direct to Dick's home QTH (2805 Casita Way, Apartment 115, Delray Beach, FL, 33415) or via the W4 bureau.

E3, ERITREA. The "Space A DX Group" is on the air now as E30GA. The group had a two day delay in operations due to their equipment being held up in customs for two days. Currently they have three stations up and active. According to "The Daily DX", authorization was granted to the group for 30 meters on a 2nd class basis. This means they can not interfere with other non amateur transmissions. Also reported, the group will mostly be using the E30GA callsign, even though the operators have received their own personal callsign (Joe/E30GA, Vance/E30FA, Bruce/E30JA, Franz/E30BA and Elvira/E30IA). QSL cards for E30GA go to K4JDJ, all other callsigns go via their home calls.

FT5Z, AMSTERDAM. The team of F5PFP and F5SIH (the two FT5ZH operators) are on Reunion Island until November 10th. They will leave on the ship "Marion Dufresne" for the long trip to FT5W, FT5X and FT5Z. They plan to arrive on Amsterdam November 24th. Operation start-up is scheduled

for November 27th.

J6, ST.LUCIA. The SouthWest Ohio DX Association is again organizing an operation from here for the CQWWDX CW Contest. Their station J6DX will be active as a Multi-operator, Multi-transmitter entry in the contest. A total of seventeen operators will install and operate the "Field Day" type station this year. The team will begin arriving on the island on November 22nd. The first on-the-air activity will probably take place the next day. Operations will wrap up on December 6. Look for SSB, CW and RTTY activity on all bands. The group will also have a KW and 5-over-5 yagis on 6 meters. Nine veteran members will host eight rookie operators. The veterans of past J6DX adventures are: Dean, AC0S/J68AH; Jack, K9JE/ J68AR; Steve, N8BJQ/J68AI; Bob, N8NR/J68NR; Steve, N8SM/J68AG; Scott N9AG/J68AS; Ron, W8ILC/J68AM; Frank, W8OK/J68OK; and Kirk, W8QID/J68ID. QSL cards for these ops go to their home calls. Newcomers are: Don, K8NOZ; Lou, K9LU; Gary, K9MMS; Gary, KI6T; George, N2GA; Don, N6JRL; Leo, S50R; and Geoff, W0CG. QSL arrangements will be announced for these operators. The group will be active in the ARRL 160 Meter contest working all who call. The call used will be J6DX or J6A. All QSLs for J6DX or J6A should be sent to N9AG. E-mail requests for bureau replies will be honored. A special effort will be made to activate all operators on the U.S. Thanksgiving holiday, November 27th. Activity will take place in the U.S. Novice band, 28.1 MHz to 28.2 MHz CW and 28.3 MHz to 28.5 MHz SSB. A special souvenir of St. Lucia will be sent to the station making the most contacts with St. Lucian stations. Contacts count only once per mode. Ties will be broken by lot. Anyone contacting five or more J6 stations will receive a certificate. Send a large SASE to N9AG for the certificate, please.

JD, OGASAWARA. Look for Den, JI1FLB, to become active between December 30th and January 2nd. His callsign was not provided, but his activity will be on all bands (including 6 meters) with some satellite operations.

JI, AWAJI ISLAND (JAPAN). Takeshi, JI3DST, who was active this past weekend from here, will again be active November 14-16th during the "1998 Japan International DX Phone Contest". Activity will be mainly 15 and 10 meters. This island is located in the Honshu's coastal island group and has the IOTA of AS-117. Details on the contest will be provided to all OPDX InterNet Subscribers as an additional bulletin.

PJ, NETHERLANDS ANTILLES. The "DX News Sheet" reports that Joeke, PA0VDV, will be active once again from here between November 29th and December 28th, probably as PJ9/PA0VDV. Activity will be from from Curacao with operations mostly on CW. QSL via home callsign.

PY0S, ST. PETER AND ST. PAUL ROCKS. Karl, PS7KM, reports that the NATAL DX Group of Brazil continues preparations for their "March 1999" DXpedition. The followings operators will participate in this operation: JA4MRL, PT7AA, PS7KM and WX5L. The QSL information is as follows: CW contacts go via PT7AA and for SSB/RTTY go to PS7KM, via callbook. The team plans to operate 160-6 meters for 12 days or for two full consecutives weekends. Priority will be given to the bands on 6/40/80/160

meters and RTTY. They mention the possibility that this will be one of the last DXpedition, to these rocks due to the increasing control of the area by the Brazilian Navy and Dept. of the Environment. There are already four researchers from those departments on the rocks on a permanent basis. The DXpedition projected budget has been set for 11,000 (USD) and that 70% of that amount will be allocated for the leasing of a sailboat, which will be anchored nearby for the entire duration of the operation. Therefore, they are requesting financial support from the ham radio community, clubs and DX foundations which would help make the difficult access to these rocks possible. If you would like to help, please, send your contributions/donations to: PS7KM or WX5L or JA4MRL, via callbook.

QSL INFO AND NEWS
The W5RRR station at the Johnson Space Center will be issuing a STS-95 commerative QSL card for those who made a contact during this operation. The operator stated to use the following address: NASA/Johnson Space Center, via Amateur Radio Club, Houston, Texas 77058

The Jacky's E31AA and J28AG logs are now on-line at: http://www.qsl.net/n6ed/f2cw_search.html

EP3HR QSLs. Mario, I2MQP, reports that he has the logs for January 1st through February 6th and May 8th and June 7th (in 1998). He also reports that all cards have been answered for this period.

MORE ON YA1R. OPDX received a report that the YA1R station, which was active a few weeks ago on 15 meters CW, the operator stated to QSL via RW3LO. This is also listed as the route by RW1QM on the WEB page: http://www.ampr.spb.ru/search/index.html

Log searches can be found for FG5BG (1998 CQWW SSB Contest), FG/N6RT, FG/N6ED, FG/K6RO, and FG/W6KK logs at: http://www.qsl.net/n6ed/fgsearch.html
Please note that K6RO can only handle FG5BG QSLs for the 1998 CQWW SSB Contest operation. All others must go direct to Georges FG5BG. Don't forget to look at N6ED's great index of log search pages at: http://www.geocities.com/SouthBeach/Palms/8651/

SPECIAL EVENT STATION. Look for SN0SUL to be on the air until November 15th. This special callsign is for celebrating the 80th Anniversary of Regaining Independence by Poland. The station QTH is Sulejowek (20 km east from Warsaw) the place where Joseph Pilsudski lived. This Polish national hero was a Great Marshall and Leader-in-Chief. Look for SN0SUL to be on all bands (CW, SSB, RTTY, SSTV). QSL is preferably via the bureau via SP5ZCC.

SPECIAL EVENT STATION. On November 11th. 1998, Ham Radio of the "Radio-Club des Fagnes" (Nothern France) will activate a special event station from the FORT DE LEVEAU located in Feignies nearby Maubeuge in order to commemorate the 80th anniversary of the end of World War I. The special

callsign used will be TM1WW (1WW for 1st World War). The timetable of the activities is planned as follows :
0001 - 0800 TU - 1835 kHz and 3536 kHz in CW.
0800 - 1300 TU - 7025 kHz in CW.
1300 - 1700 TU - 40/20/10m in CW and SSB on request.
A special QSL card will be issued for the Event. QSL information: either via bureau or direct (SASE for France, SAE + 1 IRC for DX) is to be sent to Daniel LIBERT F5SPW, 33 rue Honore Lespilette, F-59330 Neufmesnil, FRANCE.

SPECIAL EVENT STATION. Also, look for TM8OA to be active to commemorate the 80th anniversary of the Armistice (November 11, 1918, end of WWI). The station TM8OA will be active up to November 15th, on all bands and modes. QSL via F6KVD.

T8, BELAU. Dave/KJ9I, Rudolph/NF9V and John/NZ9Z will be active from December 8-17th, as T88II. Their activity will be 160-10 meters, including the WARC bands. Their top priority will be activity on 160 meters. QSL via KJ9I.

TL, CENTRAL AFRICA. Alex, PA3DMH, reports that Alex, TL5A, will be paying special attention to Topband again. Alex listens for JA stations at 2100z on 1833 kHz (QSX 1912 kHz). Also, after Japan's sunrise he will listen for Europe. Both North and South America, along with Europe should listen around 0300-0430z on 1833 kHz. Alex, PA3DMH, reports that direct QSLs for the TL5A backlog are gone. Cards received are in and out and it takes approx. 2 weeks depending on his job workload. Bureau cards are on their way from the printer, and Alex is hopeful that he will issue the first bureau requests this month. Because of the extent of the TL5A operation, Alex has decided to get a TL5A Website up and running. Although the site is still "under construction" the page is available at: http://www.igr.nl/users/pa3dmh/tl5a.html

VP8, SOUTH SHETLAND ISLANDS. The "DX News Letter" reports that Stan, SP3BGD/HF0POL, will leave South Shetland in early December. They also mention that in 1999 there will be "NO radio amateur on this base". QSL via bureau to SP3SUN or direct: Piotr Miranski, ul. Rydza Smiglego 27/5, 65-610 Zielona Gora, Poland.

WP2, U.S. VIRGIN ISLANDS. "The 59(9) DXReport" states that Dave, WD5N, will be a Single Op/All Band entry in the upcoming CQWW CW Contest from WP2Z. QSL via KU9C.

ZL9, KERMADEC. From a press release dated November 5th, the New Zealand Kermadec DX Association team met with the New Zealand Department of Conservation officials on October 31st in Wellington to finalize details for the ZL9CI Dxpedition. The meeting was cordial and defined what is permissible on Campbell Island in terms of protection for the wildlife flora and fauna. The Conservation Department was extremely helpful and has allowed the team to add an additional team member to the group. The team's additional member is Murray, ZL1CN who is a very capable operator and New Zealander with contest experience as a member of the ZM2K Kiwi

Contest team. The complete press release will be sent out to all OPDX
InterNet Subscribers as an additional bulletin.

November 9, 1998
Target: rec.radio.amateur.misc

Welcome to The W8MMQ Wire, for November 9, 1998! This newsletter is now presented in expanded form, bringing you the latest amateur radio news, information and links each Monday! You are free to distribute this newsletter to others, so long as credit is given to W8MMQ in some way. Thank you.

If you have any comments or questions, please direct them to w8mmq@usa.net. Also, if you would like to contribute to this newsletter, just email me, Dan/W8MMQ. I will review all information submitted to me, and consider it for the next issue of The Wire.

In this issue: the Radio History Society of Central Michigan; ARRL seeks new LF frequencies; Amateur radio lifeline in Central America; upcoming amateur radio contests; and much, much more!

THE RADIO HISTORY SOCIETY OF CENTRAL MICHIGAN
After much consideration, and discussions with several of our members, the Radio Society of Central Michigan has now become the Radio History Society of Central Michigan.

With this decision comes a change in focus. The Society will now focus on the collection and restoration of antique radio equipment, primarily amateur radio equipment. All former services, with the exception of The RSCM Wire, have been dissolved.

The RSCM Wire, the official newsletter of the Society, has now become The W8MMQ Wire, and will continue to be distributed weekly. All of the individuals who were once on the Society's mailing list will continue to receive the newsletter.

In addition to The W8MMQ Wire, the Society now offers a new newsletter, The Exciter, which covers upcoming events for antique radio collectors, current radio reviews and restoration tips, and much more. To subscribe to this mailing list, simply email ars@qsl.net and ask to receive The Exciter, which is distributed bi-weekly.

To learn more about the Radio History Society of Central Michigan, visit our web site at http://qsl.net/ars/. Among several features of the site is a radio review section, where we present a detailed review of a particular antique radio.

If you have any comments or questions on this decision, please feel free to contact Dan/W8MMQ. All of your email will be reviewed and answered as soon as possible.

THE ARRL SEEKS NEW LF FREQUENCIES
The American Radio Relay League (ARRL) is now petitioning the FCC to allocate portions of "long-wave" to the amateur radio service.

The ARRL has requested two allocations, at 136-kHz, and 160-kHz. The petition was filed on October 22, and, among other things, states that these allocations would allow for antenna and equipment experimentation, the study of propogation, and more.

The petition states that the transmitter power output at both allocations would be limited to 200 watts PEP, "but in no case greater than 2 W EIRP (effective isotropic radiated power)."

Other countries around the world already allow amateur activity in the long-wave spectrum, such as the Netherlands, Great Britain, and Ireland.

For more information on this petition, visit the ARRL web site at http://www.arrl.org/announce/lf-pet.pdf. You will need a .PDF viewer to view this petition.

Encourage others to support this latest effort by the ARRL, and contact the FCC at fccinfo@fcc.gov with your support.

AMATEUR RADIO LIFELINE IN CENTRAL AMERICA
Taken from the ARRL Bulletin, November 5, 1998

Ham radio is playing a major role in rescue and relief efforts in storm-ravaged Central America. Media reports from the US indicate that hams in the Southern US are active in handling health-and-welfare traffic to and from Honduras and Nicaragua, both of which suffered death and destruction at the hands of Hurricane Mitch. Hams in Nicaragua who are still on the air also have been using Amateur Radio to coordinate rescue and relief efforts there.

ARRL radio gear that saw service several years ago in Puerto Rico after Hurricane Hugo and in Hawaii after Hurricane Iniki now is on its way to Honduras. ARRL Field Services Manager Rick Palm, K1CE, reports that five 2-meter hand-held transceivers and two 2-meter mobile units have been shipped to Omar Paredes, HR1OP, via his sister, Lidice Paredes, HR1LPS/W4, in Miami. Omar Paredes is affiliated with the Club de Radio Aficionados Central de Honduras in Tegucigalpa.

Responding to a request that came through the Hurricane Watch Net, Palm says a 2-meter repeater also will be sent to missionary Kenton Brown, KC8CXW/HR3, for a club in La Ceiba. The repeater will facilitate mainland communication with the islands of Roatan and Guanaja.

The equipment, part of the League's disaster communications inventory, will be on its way Friday on a Honduran World Foundation relief flight. The League also has made arrangements with WACOM in Texas to purchase a duplexer at a reduced cost. The duplexer and an antenna for the repeater will be shipped next week.

Lidice Paredes, HR1LPS, has been in touch with her brother on a regular 20-meter schedule. ''Every day is worse,'' she said November 5 of the

news she's been getting from home via ham radio. ''The city is in complete devastation.'' Lidice Paredes said her brother, a pharmacist, has told her that there is only enough drinking water available for another two or three days. Flooding and mudslides have isolated some residents. Others are still awaiting rescue from trees and rooftops.

''A lot of ham radio operators lost their homes, their equipment,'' she said, but hams like her brother who are still on the air have been attempting to coordinate their disaster response activities. ''It has not been very easy. It's taking a long time,'' she said.

As her brother indicates a need, she's been helping from the US to obtain and ship necessary medicine and supplies. Lidice Paredes also has been working with Miami-area TV stations to relay news from the disaster area.

Media reports also indicate that the Texas Baptist Men relief group is coordinating its efforts via ham radio in Nicaragua and Honduras. The organization has sent a planeload of supplies to Central America.

While the Hurricane Watch Net stood down after Mitch was downgraded to a tropical storm last week, other Amateur Radio nets have continued to be active. The Mexican Hurricane Net was active on 7055 kHz. A Central America Emergency Net also has been active on 7090 kHz. Octavio Miranda, TI2OHL, in Costa Rica reports the only contact is via ham radio, with limited help from some military helicopters.

The Salvation Army SATERN Net on HF has been assisting with emergency, logistical, and health-and-welfare traffic.

The unofficial death toll is approaching 10,000, and another 13,000 people are still missing. The remnants of Mitch hit the southwest Florida coast November 5 but was reported to be less of a danger this afternoon.

UPCOMING AMATEUR RADIO CONTESTS
For complete upcoming contest information, visit the ARRL Contest Calendar, at http://www.arrl.org/contests/.

Netherlands LF Test, November 14
A special CW LF operation will be on the air from the Netherlands beginning November 14 at 0900 UTC. The frequency will be 136.5-kHz, and the call sign will be PA2NJN. The operation will run 150 watts to a wire antenna, tethered to a kite at about 920 feet in the air.

Japan International DX Contest
The contest is sponsored by Five Nine magazine, and runs from 2300-Z on November 13 through 2300-Z on November 15. Work JAs only on 80, 40, 20, 15, and 10 meters. For more information, visit http://jzap.com/je1cka/jidx/.

AMATEUR RADIO RESOURCE SITE OF THE WEEK
Well, after a several week delay, the Resource Site section is back! If

you have found a web site that you think should be listed here, just drop me a note! I will review the site, and consider it for this section.

This week, the current feature is the Amateur Radio WWW Bookmark File, with literally hundreds of amateur radio links. This site is broken down by subject, and is quite easy to navigate.

If you are looking for a specific web site, or just want to browse sites of a related subject, this is certainly the site for you!

Check out http://www.qsl.net/ham-www/. The automatic additions feature of this site is currently disabled, but will be available soon.

AND ... IN CLOSING ...
Thank you for reading this issue of The W8MMQ Wire! Again, please feel free to pass this newsletter along to others! But be sure to give credit to W8MMQ in some way. Thank you.

Information for portions of this newsletter was taken from the following sources: Amateur Radio Newsline, The ARRL Letter, and published news reports.

For more amateur radio news, information, and links, be sure to visit the W8MMQ amateur radio web site at http://www.qsl.net/w8mmq/.

I'm not yet licensed but plan to be soon.... It really surprises me,
though, to learn that there are problems like this. I always thought that
the ham bands were "self policed" to the point that there just weren't any
of the CB-type idiots around.

Is this a wide spread problem or just something that happens occasionally??

Regards,
Robert

2389. off-topic: reporting USENET abuse

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-08 00:00:00 UTC
From: Robert Rochte <robert@nordhaus.com>
Message-ID: <724vph$jn8$1@holly.prod.itd.earthlink.net>
Source record: 158533

I haven't been reading this particular group for long but I've already noticed some abusive and inappropriate posts, at least a few of which originated from AOL addresses. If you've seen this, too, and want to help clean things up, please report the incidents to abuse@aol.com. The text below is snipped from the automated reply sent in response to such a notification:

"All reports of abuse will be fully investigated by our staff. Please note that due to the volume of mail we receive, you may not receive a personal acknowledgment or indication of action.

In the event that you are reporting USENET abuse, please check the daily summary of USENET actions posted to news.admin.net-abuse.bulletins. All accounts reported for more than 5 inappropriate or otherwise abusive USENET articles are listed in this report.

Also, please carefully check the headers of USENET articles to ensure they are not, in fact, forgeries--it is becoming fashionable for Internet users to do this. Headers which will quickly point out forgeries include NNTP-Posting-Host and Message-ID. If you come across a forged article, please report it to the postmaster or abuse account on the site from which it originated."

2390. Wanted: NexGen motherboard+CPU

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-08 00:00:00 UTC

I'm looking for an old NexGen motherboard and CPU combo for a
class I'm going to be teaching this summer.
It must be working, and I'd perfer it to have PCI slots and the
instruction book, but will concider others if not. If you got one for
sale, remove the anti-spamming works from my addy and e-mail me and we'll
negotiate the price.

--

Robert,

I suspect that it is not nearly as bad as it sounds. It's definitely not a perfect world, but the vast majority of hams are polite, pleasant, and law abiding. Except maybe us ranters on the news groups. :-)

Good luck getting your ticket.

Well no kidding, dummy. General and above are the only ones that are
SUPPOSE to be on voice on 75. You have a knack for stating the
obvious. Who's to say a new ham can't be a General? You CAN take your
novice and above in one sitting you know. Besides, the only reason you
even mention this is because you're only a Tech. If you weren't lazy
or retarded, you would have been a General by now QRMing with the big
boy's on the Liberty Net. Don't sit there and lie telling the world
that you wouldn't be a just as big a pain in the ass on the air as you
are on Usenet either. Your personality wouldn't allow a passive life
on 75 meters, Rambutt.

I am a long time ham radio operator and most recently a NEXTEL "Direct Connect" (2 way radio) user in Florida. The system works well here and have met lots of nice folks who like to communicate around the state.The statewide coverage is really quite good. Are you in Fl and would like to join the fun? No add'l cost once you have a Nextel phone/radio, no strings attached. See website at:
http://www.geocities.com/SouthBeach/Coast/2863
I do not work for NEXTEL or any such company.
Remove the '1' from my e-mail address when sending e-mail

I went there. Did not see it listed. I also did a search in Yahoo and
HotBot, and only found some dead pages.

> if not have you ever thought of Buying a frequency manual from radio shack
> or a Repeater Directory from the ARRL?

I considered it. But I figured that since there are probably at least a
few thousand hams who use VHF here in NYC, a couple of them could just
post a few repeater sites and info, instead of having to send away for a
$13 book listing everything all over the country.

Does it really take that long, and is it that inconvenient,for someone to
to type something like

146.555 +600 PL 100 ?

for a couple of repeaters?

In a message dated 98-11-07 07:59:24 EST, Jeffrey Herman wrote:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
One HF band in particular has surely dropped in quality since 1958 when it
was given to citizens: 11 meters. For its first 20 or so years, operators
using it were required to be licensed (non-Morse).
>>

For those who weren't around then, the licensing procedure for C.B. was merely filing out a form (name and address) and mailing it into the FCC. You could not transmit until you got your *ticket* in the mail and got a 3x3, or later, 3x4 callsign, and the callsign could be used be anyone living in that household. You had to identify yourself, by callsign, just like you have to on the ham bands. Only a few of the 23 channels were for inter-station communications, the rest were for intra-station communications only.

People use to conduct them selves as ladies and gentlemen on the air. Granted, not everything was peaches and cream, but it wasn't until the FCC removed the licensing requirement that CB became what it is today.

>

My first rig (in 1960) was a Hammarlund HQ100AC and a HT40.
the HT40 was my novice rig (My dad and I both got our calls at the
same time and upgraded to Conditional in 1961). We were rock
bound. My first QSO as a ham was with ham from Canada. I was 12
years old then. His call was VE7BGL and mine was KN0KDD. I was so
excited that I could hardly copy. He was weak but I still got a QSL
card out of him. We upgraded to a Viking Valiant 1 when we got out
Conditional (I was K0KDD and my dad was K0KCX). We had a 40 meter
dipole, and a 10-20 verticle (It didn't work well). We put up an 80
meter dipole, but we could not get the SWR under 2.0 no matter
what we did. We bought a Hallicrafters SR-150 and a Gonset GSB 201
linear and an Heath kit SB301 (I assembed it with the help of dad).
WE used a thunderbird tr3 junior Antenna.
Still the best memories were of my father in the ham shack with
thte smells, sounds and sights. At night my dad often turned the
lights off. The Valliants 866 lit up the room with the help of the
other tubes. There was always coffee in the Ham shack
Those were the best days of my life.

Just the opposite is true. The FCC removed the licensing requirement and
essentially "gave up" on CB because the chaos on the band had become more than
they could ever hope to enforce.

Even when the licensing requirement was still in force (late 70s), it was
routinely ignored. Most operators either had no license and just used their
"handles", or used
their "temporary" callsign on a permanent basis.

Leavenings of Crows!! I defy the average amateur operator to repair a genuinely embedded failure of his/her FT-1000! It is not going to happen. Having said that, there is no reason why that same individual could not/should not be able to at least understand how the equipment functions. I've been doing electronic maintenance since the '60s and have transitioned with emerging technologies; that's my profession. Do I like to old tube stuff...you bet! I grew up with it. But do I understand and appreciate what the new technology? Absolutely! The simple fact is, technology has distanced the user from the maintainer. That's not a bad thing, per se. The amateur's position cannot, however, be that of a simple user. Read your license grant; you are given the authority (with the inherent responsibilities, therein) for the establishment and operation of a radio station. That transcends not going beyond page 2 of the equipment manual..."To turn on your new Belchfire MK-II Transmorgrifier........"

You guys just happen to have hit no-problem radios out of Alinco stock.
Subject here has nothing to do with features/dollar. What if you get a defect
radio and have to send it back few times on your expense, like John did. I
would be more sympathetic to someone who were given P.O.S. from Alinco; I'd
also agree that probability of getting one is more likely than other brands.

Mark

Hi,

I recently purchased an old IC-AH1 with whip antenna, unused.

I need to get a manual, or at the very least, the wiring configuration for the multicore lead which connects it to an ICOM HF transceiver.

Can you help?

Please reply via email to...

tony_preston@hp.com

Thanks,

Tony

```
Don't even think of getting a license. First of all, if you are
planning to get a tech or basic license, you will be probably on air
but you don't find out anyone to talk to. You call CQ on 2m repeaters
and you surely know there are people on the freq. They don't answer
you since they don't know you. You waste your $ for transceiver.
I just went to Ottawa today and no one answered in any of the
repeaters when I told if someone was on freq (I know 100s of them were
on freq) or asked for signal check.

I did and they wouldn't listen. So I quit! The thinking was so antiquated. The ARRL was just a good ol boys club and had no idea of what lay ahead of them. Now in the recent year they have started to realize if they don't move off their old ways there isn't going to be much of an amatuer population to be king over.

As for running for Kongress! Not in you wildest dream. Expose my life to every thug that wants to pry into it. Good greif! As much as the prying press and oppositionparties will do I don't think the Pope could get elected let alone Jesus Christ himself.

Regards
James

2442. Sweepstakes CW -- anyone else notice the low CK's

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-09 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <3647AA96.8CD25545@yahoo.com>

Hi,
I'm a big cw buff. Spent the weekend working Sweepstakes, the second most fun next to field day. Nice band conditions on Saturday, for a change.

Anyway, to my point:

I must admit we CW ops appear to be a dying breed. In November Sweepstakes this weekend, out of about 450 QSO's, I worked only two...count 'em, TWO stations with a check of 1990 or later. I worked about a dozen stations with checks in the 1980's. When I handed out my check (87) most asked for a repeat. Lousy sending? Not likely, thanks to Tree's NA program. Probably expecting a lower check!
Vast majority of my Q's fell in the 1950's and 1960's, and about the same amount in the 70's as in the 30's and 40's.

For those who dont know, the check is a 2 number exchange that designates the year in which an amateur operator first got his/her ticket. Does that mean newer hams are not into CW contesting? Guess it should be no surprise, but even the novice bands were pretty quiet. The contest was full of older folks. Where were all the 20 and 30 year old ops (or younger)?

No...this is not meant as a debate for or against CW. This is a CONTEST question -- why are younger folks not interested in "Radio Sport" or contesting?

International regulations also require sending by hand and receiving by
ear. We don't have a sending test and we allow deaf people to receive
visually or by tactile means. We are already violating the international
regulations.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <716>
.....
>From the Editor's Desk:

This week we bring you news of the efforts of emergency communicators trying to mitigate the suffering in Honduras and Nicaragua cause by Hurricane Mitch. Also, some organizations that ask for aid and donations for the families affected by the disaster. If you have a newsletter or participate in an emergency radio net, please pas along this valuable information.

Stay safe, everybody -- see you next week! Dave Larton, Editor

Current Events:

AMATEUR RADIO PROVIDES LIFELINE IN CENTRAL AMERICA

Ham radio is playing a major role in rescue and relief efforts in storm-ravaged Central America. Hams in the Southern US are active in handling health-and-welfare traffic to and from Honduras and Nicaragua, both of which suffered death and destruction at the hands of Hurricane Mitch. Hams in Honduras and Nicaragua who are still on the air also have been using Amateur Radio to coordinate rescue and relief efforts there.

ARRL radio gear that saw service several years ago in Puerto Rico after Hurricane Hugo and in Hawaii after Hurricane Iniki now is on its way to Honduras. ARRL Field Services Manager Rick Palm, K1CE, reports that five 2-meter hand-held transceivers and two 2-meter mobile units have been shipped to Omar Paredes, HR1OP, via his sister, Lidice Paredes, HR1LPS/W4, in Miami. Omar Paredes is affiliated with the Club de Radio Aficionados Central de Honduras in Tegucigalpa.

Responding to a request that came through the Hurricane Watch Net, Palm says a 2-meter repeater also will be sent to missionary Kenton Brown, KC8CXW/HR3, for a club in La Ceiba. The repeater will facilitate mainland communication with the islands of Roatan and Guanaja.

The equipment, part of the League's disaster communications inventory, was to be shipped on a Honduran World Foundation relief flight. The League also has made arrangements with WACOM in Texas to purchase a duplexer at a reduced cost. The duplexer and an antenna for the repeater will be shipped next week.

Lidice Paredes, HR1LPS, has been in touch with her brother on a regular 20-meter schedule. "Every day is worse," she said November 5 of the news she's been getting from home via ham radio. "The city is in complete devastation." Lidice Paredes said her brother, a pharmacist, has told her that there is only enough drinking water available for another two or three days. Flooding and mudslides have isolated some residents. Others are still awaiting rescue from trees and rooftops.

"A lot of ham radio operators lost their homes, their equipment," she said, but hams like her brother who are still on the air have been attempting to coordinate their disaster response activities. "It has not been very easy. It's taking a long time," she said.

Media reports also indicate that the Texas Baptist Men relief group is coordinating its efforts via ham radio in Nicaragua and Honduras. The organization has sent a planeload of supplies to Central America.

The Central America Emergency Net also has been active on 7090 kHz. Octavio Miranda, TI2OHL, in Costa Rica reports the only contact is via ham radio, with limited help from some military

helicopters. The Salvation Army SATERN Net on HF has been operating to assist with emergency, logistical, and health-and-welfare traffic. -- ARRL Letter

Aid Sought For Victims of Hurricane Mitch

Local relief groups, Hispanic organizations and Central American consulates are raising money and collecting supplies to aid the victims of Hurricane Mitch.

Hurricane Mitch, one of the most devastating storms to hit Central America this decade, has affected more than 4 million people and has left more than 7,000 people dead and homeless. Preliminary damage estimates are in the millions and there is an immediate need for food, medicine and money. Together for Central America, a Bay Area relief effort made up of a coalition of community organizations, print and broadcast media representatives, the San Francisco Chamber of Commerce and the general consulates of four Central American countries will gather at the Roccapulco Club at 3140 Mission St. on Saturday from noon to 6 p.m. to accept on-site contributions.

The International Federation of the Red Cross has announced an appeal of $7.2 million to help the hurricane's victims. The American Red Cross has made an initial contribution of $25,000 for immediate disaster relief operations. In addition, the organization is exploring the shipment of selected relief supplies to affected areas.

The American Red Cross Bay Area Chapter is accepting financial donations at (800) HELP-NOW or (800) 257-7575 for Spanish speakers. The Red Cross plans to distribute food parcels, water, hygiene kits, blankets, medicine, chlorine, kitchen tools, shelter supplies and materials for home reconstruction with the money donated.

Satellite Operators Brace For Meteor Shower
By Andrew Craig, TechWeb

Satellite operators are bracing their equipment for a massive meteor shower next month, but opinion is divided over whether to expect a communications catastrophe or just a gigantic fireworks display. When the Leonids meteor shower occurs on Nov. 17 and Nov. 18 this year, it will appear as a spectacular visual show for observers on earth. For the several hundred satellites providing telecommunications, broadcasting, and other signals, however, the fast-moving sand-sized particles could cause damage and disruption, said experts in the satellite industry. Leonids is a meteor shower that trails the Temple-Tuttle comet as it passes the earth every year. The comet is on a 33-year cycle and will be closer to the earth this year than it has been since 1965.

The majority of the particles in the shower are smaller than a grain of sand, but will be traveling at more than 200 times the speed of sound. The particles will vaporize material on impact. This could devastate the electronics on board one of the 800 satellites now orbiting earth.

The impact of a satellite outage was felt in May, when almost all pagers in the United States went out of action after a technical problem with the PanAmSat Galaxy IV communications satellite.

Satellite operators are taking precautions to limit the likelihood of their satellites being damaged by the shower. San Jose, Calif.-based satellite operator Globalstar said it will be taking precautions to make sure it is less vulnerable to damage from the shower. Globalstar will not be adjusting its solar arrays -- the panels projecting from a satellite -- during the shower, said Globalstar spokeswoman Jeanette Clonan. Globalstar has eight low-earth-orbiting satellites for its satellite-communications system to be launched next year, but the risk is greater to geostationary satellites, of which it has seven, said Clonan. Between five and 10 satellites are likely to be affected by the shower. Some services, such as pager services could be knocked out, according to satellite-software company AGI. "While we are not talking about meteoroids the size of Texas coming at the Earth, there is a reason to be alarmed," said AGI president Paul Graziani.

"Literally thousands of rocks and debris will be hurling past our satellites, and even a piece of sand going more than 226 times the speed of sound has the potential to do major damage," said Graziani.

But some say the shower may be little more than a visual spectacular. "Satellites get hit all the time, so presumably they are built to withstand the impact," said Chris Tout, an academic at the Institute of Astronomy, at Cambridge University, England.

The intensity of a shower like Leonids does increase the likelihood of a satellite getting hit, said Tout, "but I'm sure we're not going to have a communications catastrophe," he said.

California Governor's Office of Emergency Services

EMC157 A Deep Thought! On Floods 3/3 For release 11/9/98

Continuation of an article by Ray Grimes, W6RYS, in the Orange County RACES newsletter "NetControl" for September, l997:

Lastly, from the same article, "Helpful hints from a Florida fire department that responds to many vehicular water rescues each year. This could save your life if you ever had to abandon your submerged vehicle.

"A flooded car may float for up to three minutes before sinking, allowing plenty of time to exit, providing you don't panic. In this regard, remember 'POGO', which stands for Push your seat belt release, Open a side window Get Out.

"You will NOT be able to easily open a door unless the pressure has been equalized by total car flooding. You will NOT find sufficient uncontaminated breathing air trapped within the vehicle. Remember, a sinking vehicle may roll or flip, so mentally prepare for an unusual attitude exit. Carry a sharp tool in the passenger compartment such as a spring-loaded center punch or a screwdriver. You will be able to shatter a car side window with a sharp blow (the windshield and rear window are tempered safety glass and will not be so easy to break). Most newer cars have electric windows. The electrical system will likely be shorted out by water, requiring either window breakage or total vehicle submersion to equalize pressure to allow door opening to effect an emergency exit. Don't panic. Under stress, many people forget they are restrained by a seat belt."

Ray's permission to quote and paraphrase is appreciated. End.

Editor's note: Before seat belts were standard items on vehicles, some highway patrols urged drivers to mentally rehearse ahead of time the process of being involved in an accident. In that case they suggested the driver prepare to throw his/her self to the front floor, under the dash seconds before any unavoidable crash. The same concept could be applied to preparing to exit a vehicle in water. Mental preparation and teaching the body what you want it to do ahead of time may save your life. ---

Hello all.

Looking to get a new radio, and am interested in your comments/experiences with computer-control. (Not the Kachina - still want a real radio with knobs and buttons - also can't imagine ctrl-alt-del in the middle of a QSO cuz my radio gets a GPF - Hi) The concept seems cool though, especially interfacing with DX cluster and logging/contest programs....

Seriously considering a KW 570S/G or an ICOM-746 or 756. The literature has plenty on the basic merits and specs of each - but not much on the computer-control capabilities. It doesn't say more than "software control program included" or "pc-ready!".

My questions: What functions can you do from the computer interface? I *think* the Icom provides a point and click "spectrum analyzer" gui - true? Does the KW provide the same? Do either/both include calls or api's for developing your own software?

Tnx and 73

2457. ***NEED INFO: IC-Q7A WIDE RX .500-1.9 GHz?***

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-09 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19981108215612.13819.00001068@ng154.aol.com>
Source record: 158467

Hi. I found alot of discussion about how someone made a computer control program for the new ICOM Q7A mini HT which would allow reception of .500-1.9 GHz. I found and downloaded the program. It also says that I need a OPC-478 cloning cable or one for a Yaesu (I don't think I'll be buying one though... I have the schematic for it, if anyone needs it you can email me and I'll send it to you, .JPG format.) The author of this program says alot how you can make the radio tune .500-1.9 GHz which is more than the usual 30-1.3 GHz range.... now my questions: 1. After you used the program, can you still tune .500-1.9 GHz if you are using the radio when it's not plugged into the computer interface (stand-alone)? 2. Does this "software mod" also enable full 800 MHz (I would think not, but who knows...)? 3. How good is the sensitivity on the MW and HF band? Is MW (AM) any good? Is the receiver curcuit the same as on the new IC R2? (Same as the Q7A, but no TX, 400 memory channels, and .500-1.3 GHz RX out of the box.) Please respond by email as well as in the newsgroup because my access to here isn't the best. Thanks!

73
I LOVE THE IC-Q7A!!!
P.S. If anyone has a extra ICOM OPC-478 or one of the compatible cloning cables for the Yaesu laying around that they want to sell (or trade?) for less than what ICOM is asking for one, please email me.

>>

I would be inclined to disagree with you on this one, Marv. Although my HF rig is out of commission right now, I would often go up to the Novice sub-band, turn the speed on the keyer as slow as it would go, just to work Novices. Except at those speeds, I do need paper and pencil, because the other person is sending letters, not words.

I know several people that go to the Novice sub-bands, even though they can listen in on 35 wpm CW conversations while reading *Gone With the Wind* and not miss a beat, just to help Novices with their CW.

YOu'll have to look elsewhere for the details, but a mercury battery is
supposed to be a better standard than an alkaline battery. SOmething to
do with it holding it's voltage better. I can't remember the exact
voltage or reasoning.

I did check some old handbooks, and didn't find much until recent issues.
The one I did see suggested using a NEW carbon-zinc battery, and it's
voltage will be 1.54

I know I've seen more detail about inexpensive voltage standards for the
hobbyist, but I can't think of where they might be at the moment.

I think I finally found the perfect entry level rig. A TKIT from Ten_Tec, only $95.00. Covers 50MHz of 40 meter band and You build it. Low investment and can actually learn something. 3 watts. QRP works and offers a great sense of accomplishment and wonder when you make that contact. And it will allow me to operate and keep CW sharp while I save up forthe Big Kahuna ($1800.00 Ft 847 or similar). I bought an Alinco DX70TH from a retailer with a 30day "no questions asked" satisfaction guarantee for $1000.00 and returned it. A simple rig like this just ain't worth a grand when for $800.00 more you can get a rig that will dance around the room! Anyway....I'll keep my money in the bank for now, thank you..and do it the "fun" way. I'll report on my experince later. I know QRP works because I've QSO'ed with guys runnin' from 4 watt kits 1000 miles away, one of which was my most challenging and best QSO's yet, 30 minutes long, got every word, and was receiving him at only RST 339. All the best.

Message-ID: <E12EC3E9FA06D211817D00805FC743CC20E6EE@mail_serv>

FYI:

R. L. Drake has ceased servicing its older ham radio products (including
the 4-line gear) for a variety of reasons. See
http://www.rldrake.com/tech/Outofservice.html for the complete list.

Drake Service Manager Bill Frost, WD8DFP, says that, among other things,
parts are getting hard to come by and the Drake service people
experienced on the older gear have retired. Also, cost of repairs often
exceeds value of equipment.

Gear that's no longer being serviced by Drake and sent to them for
repair will be returned COD with a bill for the cost of shipping and
handling.

Frost says they do still have some parts, and hams wanting to repair
their own gear should call Drake. 513-746-4556.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

Hi all,

Being new to the ham radio hobby (and interested in working DX on HF), I was wondering if anyone could tell me (in simple terms) what significance the various readings mean for HF DX activity they give on the WWV propagation reports at 18 past the hour? Is there a web site that explains it in detail?

1. Someone said the higher the solar flux reading the better the signals...

2. The lower number the A index is better because less signal is absorbed...

Is that right? Im not sure what the K index is...

How do these reading work together to tell me something about DX on the HF banks?

Thanks...

Jerry

2471. No-code debate

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-09 00:00:00 UTC
From: Mark_Erbaugh@compuserve.com
Message-ID: <36470a77.6613829@news2.infinet.com>
Source record: 158481

I have been trying to formulate a comment to the FCC's NPRM to change amateur radio licensing and while getting my thoughts together I did some thinking on the code / no-code debate. I would appreciate any reasonable (no flames, please) comments.

While I can agree with points made from both sides of the debate, I am leaning towards the no-code side. I enjoy operating CW, but I don't see how the requirement of code skill helps amateur radio nor how its elimination harms it.

It is apparent that the CW requirement is a barrier to a lot of potential hams, and I feel that we need to revamp the hobby to attract more members. I don't know any statistics, but I can say that after a few years of being off the air, when I returned, I now notice a lot less local (Columbus, OH) activity than there was when I left.

My main concern about the elimination of a code requirement is that it could increase pressure to eliminate CW subbands or could cause the CW subbands to become overrun with other digital (RTTY, etc) modes. I think that CW should be preserved for those who want to use.

I recommend that, in as much as possible under international agreements, that the CW requirement be eliminated from the amatuer radio testing, but that at the same time that certain portions of the CW subbands be set aside exclusively for CW operation, i.e. no other digital modes. I would also suggest that these CW exclusive bands be available to all license classes

Mark Erbaugh, N8ME

P.S. Just in case you're wondering, I have a Extra class license, so I have passed a 20 wpm code test.

It isn't your rig, and there isn't any "mod" you can do to the rig
to eliminate the noise. The lights are the problem, and that's
where the fix has to go. The usual filtering tricks work, bypass
caps, chokes, etc. The hard part will be getting the neighbor
to install the fixes.

Hello,

My recollection of that time was that different parts of the band had
different rules. The speed merchants hung out on the low end. Higher up, you
found the medium to slow speed folks. I did a lot of traffic handling back
then, and there were both slow speed and regular section nets.

I rarely encountered anyone who wouldn't slow down to my speed.

> in the Novice bands used Novice calls.

There were a few that I recall. K3RXN was my first QSO - still have his card.
The Novice bands were crowded with folks trying to get their speed to a solid
13 before the license ran out. A Novice was originally one year and one shot -
upgrade or go off the air. I got one of the first 2 year Novices - but I knew
if I didn't upgrade in 2 years, I'd be off the air.

The Novice bands may also have sounded more crowded than they really were, because of the broad receivers many of us used.

> Your points are valid and well-taken, but a bit overstated. Not that it

And words like "h**l" and "d**n" were considered cuss words. If it wasn't pure G rated, you didn't say it on the air. The idea was that hams had to be cleaner than broadcast radio and TV - and they were squeaky clean. (Remember the broadcast "seal of good practice"?)

> I never had
> anyone try to walk up and take a frequency by "force" back then; the only

Usually there was a quick "is the frequency in use?" before a CQ.

> more as a part of an overall strategy combined with easing the licensing
> requirements than anything.

Much of what went on was not strictly illegal, just poor operating, lack of consideration, bad taste, or lack of manners. But the effect was the same: the standards of acceptable behavior dropped, then dropped some more.

But there has been very little change in the behavior of hams in the CW bands, by my direct observation of the past 31+ years. Good manners, clean language and operating practices, and consideration of the other guy are the rule on CW.

This past weekend, I spent over 20 hours working the ARRL CW Sweepstakes. I did not hear one single incident of rudeness, let alone rules violations. No jamming or taking over a frequency - and the bands were packed. No cussing, even when the competition was fierce. Patience and skill when repeats were needed. The guy in a rare section would call CQ SS, and 10 stations would call him - but when he singled out a call, or even part of one, the other 9 would stand by. Big guns thundering along at 35 per would slow down to work the guy calling at 10 wpm. There was not a single transmission I heard all weekend that was the least bit embarrasing to amateur radio.

> What was it, 1966? when QST proudly announced that we were up to 400,000
> hams in the U.S.

No, the ham population in the '60s was about 250,000. By 1979 it was up to 350,000 or so. 400,000 was reached in the very early '80s, and 500,000 before 1990. But remember that in the late '70s or so the Novice became a 5 year renewable license, and in 1984 the license term doubled to 10 years - so from 1989 to 1994, no US ham licenses expired at all. This artificially inflated the number of licenses on the FCC books. Since 1994 the "bubble" has been deflating.

I just picked up a Bowtie antenna and it doesn't match up to the manual I
have for the HF5B The dimentions are the same(12ft x 6 ft) but it is
missing a few traps.And it is too small for their 10/11 meter bowtie.
Did Butternut make another Bowtie..maybe a 3 Band model???
If so,is there any manual available.I will pay copying and mailing costs.
Thanks in Advance

Actually, operators were *not* licensed.

You were issued a station *permit*, not an operators license.

Your analogy falls flat.

: Even when the licensing requirement was still in force (late 70s), it was
: routinely ignored. Most operators either had no license and just used their
: "handles", or used
: their "temporary" callsign on a permanent basis.

Not necessarily true. My family held a ticket, since back then stations were licensed, not individuals. KYE4359 was our station callsign, and we were as strict if not stricter than hams are now. We were also very polite, used 10 codes, had to identify, and had an emergency react team of about 300 members, who used to meet once a week. CB was a wonderful thing, back in those days, and there was alot of friendship and cameraderie as a result of it.

When the fcc dropped licensing reqs for it they had run out of callsigns. The callsigns were issued on a temporary basis as zip calls, only after the licensing application had been submitted. Once they relaxed callsign reqs for the band, then it went to pot, but not before. The major problem with CB is it predominately uses AM on a band that opens up for DX during a sunspot cycle. Multipath reception causing interference, that awful screeching noise heard on most CB bands during openings, is a result of that. Becuase so many cbs are running on the same freqs, and are channel bound using AM, they naturally cause interference to each other. Newer ops who came along during the opening, who heard people talking over people, and causing interference, whether intended or not, adopted this as a method of CB operations. That's when the band went to pot. It made it thru two cycles previous to that without incident.

It is a shame indeed that more people didn't pay attention to CB, and give them something more to work with than AM on a band that is prone to interference. CB'ers would be much better off in an allocated VHF spectrum using FM instead of AM< and the 27 MHZ spectrum could be used for alot more than what it's being used for now. Just some food for thought.

Actually, a "Citizens Band Station LICENSE" was issued. That
was the name that appeared on the document that we got all
those years back.

The name "permit" appeared only on the Third Class
Radiotelephone Operator Permit, the Restricted Radiotelephone
Operator Permit, and the Third Class Radiotelegraph Operator
Permit. The rest of the "operators licenses" had the word
"license" in its name.

Interesting to note that at present, there is no Radiotelegraph
Operator License of any class. They are all now called
"Certifcates".

Robert, there have always been those in the hobby who are frustrated for one reason or another, they don't like someone else so they jam, call names etc. There is a plethora of good hams out there who understand that an amateur radio license is a license to learn, learn radio electronics, try out experimental modes of transmission, etc. Enjoy radio and do what you want to do with it, the rest are far beyond hope so rather than worry about converting them or getting thier equipment confiscated the rest of us just go on and enjoy what privileges we have and let the children play. They are a small minority but they make lots of noise so you hear about them constantly.

It is great to read all the wonderful stories that have been posted in this thread. It seems like there was (or is) some magic involved when you are using simple equipment to make CW contacts over what seemed then to be long distances.

However I have not seen any posts on this thread from hams using VHF or UHF HTs as their first station, with their first contacts being VIA a repeater. Is there just as much magic in this as there seemed to be in the old novice/crystal controlled/CW/lowpower era, or is it just all fond nostalgia?

I think it's time to say to heck with the FCC, and get out the coax-cutters.

Most teenage gang members these days will do amazing things for twenty
dollars or so.

If you can't handle it yourself, hang around the high-school one afternoon
and cough up twenty bucks.

Most teeny gang-bangers are really nice kids who are just bored and broke.
By giving them some bucks and a bit of recreation, you can introduce them to
the wonderful feeling of "a job well done" while providing a service to the
community.

For safety reasons, limit yourself to cutting or driving pins into coax...
Remember that if you give in to the temptation to cut guy-wires, an innocent
person could end up being hurt.

Of course the Feingold Bill was the wrong solution, but what
the heck, it got through The Congress buried in all the noise
of the Monica/Starr hoopla. The pros in the radio enforcement
business feel that it is a disaster....

> >The better way would be to encourage your congressman to
> >allow the FCC to keep all fines that are collected from violations
> >of FCC rules.

Bad pukka....that gives the agency an incentive to cut corners
and do wrong things and eventually be no better than those
asset forfeiture mills that don't do it right.

Better for The Congress to bite the bullet and fund enforcement
properly because it's NEEDED.

> Yes.... if they have the time.

As in any police work, time is directly related to how many
troops are on the street which is directly related to money.

Cbers are not the only culprits to misuse of equipment. The ham community should clean up their own neighborhood before they find fault in others. So what happens when I put up my Antron poorly hook up my stock 4-5 watt transmitter and the local sheriff comes and takes it away.

I then call my very adept lawyer and have him sue the local sheriff, the neighbor that filed the complaint and maybe the ham operator that help locate my sight.

I think if you check with the techs on this NG most truckers do not have
linears. Either because they change trucks to often and hook up is a pain
or the amps cause to much trouble with the trucks computers. Most I hear
and talk to in and around Chicago do not. What they do in the privacy of
their homes is their business.

Scott,

No need. Go to the following address:

http://www.arrl.org/arrlvec/examsearch.phtml

Type in your ZIP code, and check the button for the maximum distance you're willing to travel. You'll get a list of upcoming exams, and contact names and phone numbers for more info.

BTW, you lose nothing by going ahead and taking the code test at the same time as the others...doesn't cost you anything extra. The worst that can happen is that you'll have to try it again another time, and who knows, you might even pass it. So if you've studied the code at all, give it a shot.

Good luck!

73,
Dave (still waiting...and waiting...and waiting...)

No one has offered what a person is suppose to do with a brand new tv set that
he/she cannot use because of some legal cber next door?

So we just accept this?

Can I assume that all of society runs this way?

If my neighbor wants to have a picnic in my yard it's okay because picnic's
aren't against the law [and just because he is in my yard isn't the issue[??

You guys must admit you've defended an action that isn't worth defending.

So, what are we suppose to do about the problem?

I would assume my right to operate a passive device _inside_ my home is more
to be defended than a person's right to transmitt?

I think he means the neighborhood, I. E. the city or some other governmental entity. Hire a lawyer and file an interference suit in Federal Court. Good luck!!!!
Crazy George
BTW, those lights are not noisy if properly connected and installed. Startup HF noise is detectable, but not serious. However, when the bulb fails, and the starter runs amok, look out!! Good bulb start time should take less than 30 sec.

Anyone operating a legal transmitter has just as much right to transmit
as you do to watch your TV. If the TV set is so poorly designed (lack of
proper shielding and filtering) that it cannot reject the unwanted but
legal signal, that is your problem.

2506. Re: Calibrating digital multimeter - what is voltage of alkaline AA battery?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-10 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>

I thought all hearing aid batteries were mercury. They are used in the
application because there is a fairly steady drain on them but the voltage
is so low to start off with that they don't want the voltage dropping much
over the lifespan of the battery.

I just checked one, and it reads 1.345 volts on my Radio Shack DMM, on
the 4 volt scale. It's not a new battery though. Of course, I don't
know whether it's that voltage because the battery is low, or because
the DMM reads low.

It s obvious you haven't a clue about RF interference. Ever hear the
term 'fundamental overload'? Ever think that today's electonic devices
are so poorly designed as far as shielding and filtering go that even a
five watt legal and clean transmitter nearby can cause interference?
You must hate yourself as you seem to think your right to watch your TV
is more superior than someone else's right to operate a legal
transmitter.

Actually their rights are superior. If you cause RFI (interference) then
you are supposed to stop ALL transmissions. You have to prove
that you are not causing the problem. All burden of proof is on you.
Check the regulations, it is all there.

2509. Re: | * | Canada Amateur Radio Study Guide | * |

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-10 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.981110215709.18499B-100000@Ocean.CAM.ORG>
Source record: 158320
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy,can.general

Excuse the cross-postiong, but I didn't start it.

I've never seen the study guide in question, since I"m not running
a computer that can run the software to view it.

But based on the poster's newsgroup posts over the past year or so,
I'd take the website with a grain of salt.

If someone is interested in amateur radio in Canada, they'd do
well to visit the website of the umbrella group in Canada,
The Radio Amateurs of Canada, at
http://www.rac.ca

In French a useful site would be Quebec provincial organization, RAQI,
at http://www.raqi.qc.ca/

A couple of other useful Canadian websites devoted to amateur radio
is the Concordia Amateur Radio Club site at
http://hamgate.concordia.ca
(it has a good explantion of what amateur radio is)

and a website put up by an individual (yes, I can view it and I'd say it's
a good website) at
http://www.cam.org/~dino/ham.html

Another useful website for people curious about Amateur Radio would
be the site belonging to the US national organization, the American
Radio Relay League at
http://www.arrl.org
though the material about licensing would not apply in Canada.

If someone is curious about amateur radio, and has more questions,
they might want to ask in the rec.radio.amateur.misc newsgroup.

Other resources would be to visit a newsstand and pick up a copy
of QST magazine, or perhaps CQ magazine, both of which are devoted
to amateur radio.

Or visit a library and check the section the books on the topic. You
may find that what they have is old (and outdated in terms of license
requirements and even technology, but they will give you a feel for the
hobby), but many will have a recent edition of the ARRL Radio Amateur's
Handbook that will provide an introduction, and probably a lot more
technical information than many would desire to start with.

And by the way, just because someone visits a website or downloads
something does not mean that the site or material is any good. It

might mean that someone wants to see it, and it might turn out that
they don't like what they see.

I should also point out that the "radiotelephone" site may have a lot
of links, but they send you into sections of other people's websites
without sending you to the homepage. So what might look like a giant
effort turns out to be a a lot of links that send you to other people's
websites. You'd be smart to go to the primary websites directly.

And yes, it is fascinating to post a message about pointers to the topic
of amateur radio without explaining what amateur radio is. It's a failure
of a lot of groups and people when trying to reach a wider audience. They
assume others would love to get involved if only they knew where.
Forgotten is the first step, to get them interested in the topic or hobby.

But then, I didn't post in the first place to a number of widely different
newsgroups about a site that might or might not be of interest to the
people in those newsgroups.

Yes I'm aware of what your saying. What I'm saying is if you properly set your radio up using TVI filters, grounding, antenna high on a mast, chokes and so and so on, then you, yourself can eliminate 95% of the problem. I'm also aware that some TV's and steros are so cheaply made they pickup the dog barking across the street. It's the CB Rambo who sets up junk in the middle of a neighborhood trying to put out 10,000 watts that makes it hard for all of us. I run a 2950 through a 350 HD into a antron 99 (a bleeder so some say) and I have no problems because i simply took the time to set my rig up before I keyed the mic for the firat time.

The return of the all priviliges General license would make the
oldtimers whole, as well a simplifying the license structure as the FCC
requires. The elimination of the Extra Class license would be logical
for simplification, but now another group would be mad for wasting their
time testing, and of course how would we know who to give the status 2
letter calls to?

All of the above. Not to mention the dollar per watt you pay for an
M500, which probably will all be turned off most of the time anyway (skip
noise, people 2000 miles away who could never get back to anyway) so you can
hear the stereo.

Hi from New Zealand,
Well I started amateur radio, with an Eddystone 840c, and a ZC1 MKII transmitter receiver. I don't thinl the "Hiker's One" one valve set qualifies as first set, but was first receiver. DL33 valve, 2000 ohm earphones, "Brown's Type "X" were preferred. This was soon followed by an AM transmitter, see mobile rig in possibly 1956 QST, with remote VFO to get away from heat within the AM rig cabinet. It ran 60 watts AM, with 6146 valve. Modulator was 807's in Class B, Zero-bias. Recifiers 866's and about 100 wats output in conventional heavy modulation transformer.

73, from Winton Bell. ZL4II, now ZL3AO.

If your rig is set up properly and your not knocking out all the TVs in your neighorhood then you have nothing to worry about....on the other hand if you are doing this then you deserve a knock on the door.

Jerry

How about if your rig is set up properly *and* you are knocking out all the TVs? Will the local cops understand why that might happen? Will they have the equipment and technical knowledge? Probably not. Will they be influenced by local politics? (keep the most voters happy) Probably yes. The city gets to prosecute you on unlimited taxpayer funds but you have to pay for your own lawyer. Even if you can convince a judge that those TVs your bothering is their fault, it's still going to cost you dearly. Sounds kind of dangerous to me...

CBRambo <cbrambo@aol.com> wrote:

: Ham radio is dying. The ARRL, with their antiquated thinking and "let's keep
: it all to ourselves" approach, has done much to ensure the hobby's days are
: numbered.

Sounds like you need to take your medication. Ham radio is just about
to get bigger than ever. Band openings have a nasty habit of doing that.
Ham radio and sunspot cycles go hand in hand. Qrp, and cheap 10M rigs
make world band radio an affordable reality today. You can get on HF
cw with an investment of less than 100 dollars, and operate world band
radio at less power than an average nitelight. With good propagation,
that makes world band qrp a reality. I only wish that someone had turned
me on to qrp operations sooner. I would have my extra by now.

So no, ham radio isn't dying. Not even close. Besides, when was the last time
you qso'd on a rig you put together yourself ? As well as staying well inside
the new regs about power and antenna locations, etc.

How about radio and data access worldwide as well, using repeaters and the inet ?
Lot's of qso's going on in those arenas. I'm operating a soft nodestack in
Dania, FL. I see new callsigns every day now. We're having a blast ! Sorry if
it turned out to be such a bummer for you. 73.

How can you place blame on tv owners [a passive device] when cb'ers are
broadcasting [an active transmitting device]??

CB's are only legally allowed to broadcast at 4 or 5 watts, which would
NEVER cause problems for tv's. Only those using 100 watt linear amps would
have any reason to fear being arrested or their equipment being taken. Those
linears are illegal to begin with and a cb is not a right in the constitution
last time I checked...
Simple:If some police keys your mic and a nearby tv flickers, then your
equipment is illegal and SHOULD be taken from you and you should pay a large
fine for being a smartass.
I hate people who think their rights are superior.

God I love it....for 4 years Gingrich has tried everything he can to
bring down one of the most popular presidents in history and instead
it brought him down....

BWAHAHAHAHAHAHAHAHAHAHAHAHAAHAHAHAHAHAAHAHAS

Now you and the other right wing nuts are attacking your own party
because you are so frustrated that you have nothing else to fall back
on.

Gingrich blames the "24 hour news shows" on television for the
embarassment the GOP went through in the last election. They talked
too much about the so called " Monica scandal" that the people got
sick of it. This would be the "liburrlllllllllll media I suppose.
The truth is he loved every minute they were attacking President
Clinton and so did you.

Chris Mathews, one of the biggest right wing nuts on T.V. was so mad at Gingrich for blaming him that he snapped and was yelling at all the callers to his show that had the nerve to disagree with him. His problem wasn't that Gingrich blamed him for the republican losses, it was because for months he has tried to influence the election but keeping up his attacks on President Clinton every minute he was on the air and it BACKFIRED on him.

I lve it when they begin to eat their own....:)

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAA

Tuesday was a great day.....but a couple days later when Gingrich announced he was resigning I laught so hard I cried.

Think about this. On Tuesday the people in Newts district reelected him. A couple days later he announced he was going to resign.
Kind of like stealing the peoples vote isn't it? What a dispicable man he is.

You must be a TROLL because any person with just half a brain knows that there is the possibility to cause interference to TVs, VCRs and other electronic equipment even if your transmitter is 100% clean.

David

Mount your antenna on the roof. Most RF will stay out of the car, then. Try a mag mount w/ the HT & see how it does. Best to use Good quality coax & Directly mount into the roof...
Also, try asking the car manufacturer's Service manager to do a thorough check for any RFI Memorandums on the car. Make sure that he Actually Checks !!!

I've looked over the newsgroups, and rec.radio.amateur.misc appears
to be the most appropriate for my question.

I am ready to take the written examinations for Technician-class
license (and maybe the code test for Plus at some point in the future).
Does anyone know how I should go about taking an exam in the
Des Moines, IA area? I know there's a HAM club in the Des Moines
area, but I can't seem to find a website for it.

Thanks in advance,

Scott A. Miller

Consumer grade electronics is usually covered under Part 15 rules, which
you will find on a sticker on the back of the TV or whatever. It reads:

This device complies with part 15 of the FCC rules.
Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and (2)
this device must accept any interference received, INCLUDING
INTERFERENCE WHICH MAY CAUSE UNDESIRED OPERATION. (caps mine)

Don't take my word for it -- look on the back of the monitor you're using
to read this.

> CB's are only legally allowed to broadcast at 4 or 5 watts, which would
> *NEVER* cause problems for tv's.

Nonsense. Consumer electronics are commodities so little effort goes into
making it resistant to outside interference. Remember, it would still
be in compliance with Part 15. I can cause my own TV to "jump" when I
transmit on an HT that was tested with an HP spectrum analyzer and
found to be well in compliance with the regs.

> Only those using 100 watt linear amps would

> last time I checked...

http://www.arrl.org/arrlletter/96/960712
Search for GREG GODSEY

I can't find the specific quote giving more details on this incident,
but IIRC, the arresting officer keyed down the HT and it desensed his.
Therefore it *must*'ve transmitted on the police frequencies.

(That said, yes, there are lots of idiots running illegal junk on CB
which DOES splatter all over the place.)

> Simple:If some police keys your mic and a nearby tv flickers, then your
> equipment is illegal and SHOULD be taken from you and you should pay a large
> fine for being a smartass.

Please be sure you know your facts before slamming someone. I'm not saying
that what you say doesn't happen, I'm saying that it isn't the ONLY way
this sort of interference occurs. See Part 15 above.

> I hate people who think their rights are superior.

Please check your facts before flaming.

Over 10000 users (downloads) for Masa's Canadian amateur radio study guide has been recorded ! This is your chance to get your amateur radio license !

The study guide is absolutely free (it is NOT a commecial item). It contains necessary information you need to know for Canadian basic amateur radio operator's certificate including some block diagrams at the end of booklet. The professional radio operator's study guide is also available. This handy copy refers to marine radio operator's certificate and necessary extra information needed for aeronautical and land licenses are added as required. Over 5000 downloads are recorded.

All yours at:

Masataka,

If you try 900 MHz cell phones you can always QSO with the directory assistance operator. He/she will answer your CQ every time! :-)

Sorry, but it doesn't work that way. A TV may pick up even a legally operated CB transmitter or other legally operated transmitter. It happens.

Another risk is that the CB or other radio operator may be blamed for problems unrelated to his operation. Many operators have been blamed for TVI or other problems that occur even when they aren't transmitting. Bad as the FCC is, they do at least know something about determining actual sources of problems rather than just blaming a convenient scapegoat.

Then they have gone too far, legally. Wait 'til the
broadcast licensees hear that!

The Feingoild Bill, which snuck through in the last days of the
last Congress buried in the noise level from the Monica affair
and the Starr report, amended the Comm Act to empower local
authorities to enforce ONLY rules against CB overpower and
out of band operation. The Bill also provides that all appeals
go to the FCC.

I stand ready to assist anyone who wants to fight an unjust
action by "locals" on a jurisdictional basis. I would need to
associate local counsel, though, if it's not in California.

> My grief is that, like the Brady Bill on guns, the Feds want the
> local governments to pay to enforce the rules the Feds make.

You should have bigger grief that the "locals" are being
allowed to get into an area in which they are totally
unqualified, untrained, and unequipped.

The Feds did not want this. All knowledgeable communications
enforcement personnel didn't want it. It was a knee-jerk
"you will do what we say and like it" reaction by Senator
Feingold of Wisconsin (not to be confused with Senator
Feinstein of California) overlooking the fact that HIS Senate
has never given the FCC enough manpower which equals money to
do the job right and then they complain that the job isn't
being done. The FCC didn't have enough horsepower to get the
Bill killed a second time (it was killed at the session
before).

The amended section of the Act (47 USC s 302(c)) provides that
the FCC is required to provide training and assistance to the
"locals" on request (fat chance that the Podunk PD will admit
that they don't know the difference between a 2-meter mobile
rig and a CB radio), and you can expect that there will be a
whole slew of appeals to the FCC from local action....all out
of a very limited FCC budget.

> It is not
> the local communities responsibility to enforce federal laws and
> rules.

I've been saying that for decades with respect to communications law.

> Nor should the local tax payers be forced to to dollars that
> should be going to local programs like roads and schools.

Agreed. The money should be given to the FCC to do the job right.

I have never seen a decent explanation about WHY the "locals" wanted this authority as badly as The Senator seems to think or why the needed to get into this area in the first place.

> Thus we need to get the FCC to enforce it owns rules.

Step One -- get Senator Rambo to allocate enough money to the agency to permit this. When I ran the FCC SF office I frequently pounded the table about "gimme 50 agents instead of 2 and I'll get the local problems cleaned up". It fell on deaf ears. All I got was a sore hand and a high number on the "disturber" list.

I say again:

I stand ready to assist anyone who wants to fight an unjust action by "locals" on a jurisdictional basis. I would need to associate local counsel, though, if it's not in California.

Not only that, the police are instructed to take the path of least resistance and do whatever it takes to return peace to the neighborhood. This means confiscation of LEGAL CB equipment if it is causing interference and generating complaints. Don't like it? Tell it to the judge. Sure, you can sue the department...but the costs would outweigh the benefits. Just more of the same...excessive government regulation of our lives.

Why then did AES recently close it's Tampa store? Other dealers have closed
their doors as well. Why did Radio Shack discontinue it's 10m rig if such
"great times" are on the way for the band?

Wrong answer. It's because "younger folks" see much more value in learning something useful...like, say, computer skills and the Internet. Ham radio is dying. "Younger folks" see this, despite the stubborn refusal of the old farts and their Morse code keys from the 1930s.

You must be a moron then?
You're saying that a legal/clean cb inside a car/truck or even a home can
cause interference enough to cause a person to report it to the police???

Last time I checked, my cable has a shielded cover. And even if you get the tv through the air, a legally operated cb should cause a problem.

SOMETHING YOU ALSO FORGET, people can use 4 watts and have a clean cb but use illegal attenea's or other devices..
MODULATORS are also used..

Like I said, we're talking about someone causing enough of a problem that it prevents a person INSIDE THEIR HOME [minding their own business] from watching the tv without trouble.

Go ahead and support the cb'ers, you have already made it clear you do.

I hope someone moves into your neighborhood and transmits 24/7 with a 10K watt unit. Gee, wonder if you'd even complain???
NAAA!, after all he has his rights!!

Flamming? When did that happen?

I stand corrected "in the rare instance that people actually use/operate
"LEGAL" cb's"..
I know MANY people with cb's and know a lot of truckers. 99.999999% use
linears at home and in the vehicle.

Everyone I talk to about amateur radio is usually impressed by what it is all about. Granted they always think my HT is a cell phone and ask if I could call someone, but once they get past that ham radio can raise an eyebrow or two.

I LOVE HAM RADIO

> Flamming? When did that happen?

When you called others "morons," when you wished they had a neighbor
that had a 10kW linear, and proclaimed that they should be fined "for
being a smartass," and in most of your followups -- this last one
excluded -- you flamed.

> I stand corrected "in the rare instance that people actually use/operate
> "LEGAL" cb's"..

...and legal ham gear, and legal marine gear, and and legal GMRS...

A ham might want to run his 1500W linear system in his apartment with
his tuned loop out on the patio. In terms of power usage, it's legal.
(In terms of RF exposure requirements, it probably isn't.) In terms
of all the interference he WILL generate on his neighbors' TV's stereo's,
etc., legally he's in the right. In terms of whether or not his judgement
or his diplomacy is any good, that's a different story.

> I know MANY people with cb's and know a lot of truckers. 99.999999% use
> linears at home and in the vehicle.

That means you know 100,000,000 people who use CBs and only 1 of them
is legal? Methinks you exaggerate a touch.

Over 10000 users (downloads) for Masa's Canadian amateur radio study guide has been recorded ! This is your chance to get your amateur radio license !

The study guide is absolutely free (it is NOT a commecial item). It contains necessary information you need to know for Canadian basic amateur radio operator's certificate including some block diagrams at the end of booklet. The professional radio operator's study guide is also available. This handy copy refers to marine radio operator's certificate and necessary extra information needed for aeronautical and land licenses are added as required. Over 5000 downloads are recorded.

All yours at:

Danny, I can tell you how I connected my IC-Q7A to the computer. My cable is actually in two parts: one short cable that converts a four pin connector that plugs into the radio, to a three pin connector, that then plugs into another cable that has a nine pin serial connector on the far end. The nine pin connector plugs into the a serial port on the computer. My cable came with the ADMS-1D software for Yaesus, such as the VX-1R. Yours may termninate in a 25 pin connector. That can be plugged into the computer if you have a 25 pin serial port or an appropriate 9-to-25 pin serial adapter.

The software lets you choose com port 1, 2, 3, or 4. You need to know which com port you are using. You may run into a conflict with other devices that use a com port (such as mouse or modem). Note that you need a mouse to navigate in the program! I suggest connecting the cable to the radio and a spare serial port, start the software, then go through the setup, choosing a com port. If that doesn't work, try the next one and so on. Be sure to study the Readme.txt file.

I hope that helps.

Jack

Somehow, the contact is a lot more rewarding when you do it yourself, rather than letting some repeater owner do it for you.

And yes, there is something special about CW. Not because it's nostalgic, or because CW operators are a bunch of elitists, but because CW QSOs are invariably more friendly and relaxed, and because copying requires enough concentration to leave your mind completely clear and relaxed when you're done.

International regulations state that the code is require for HF operation
on the amateur bands. The FCC has to have a code requirement for HF
amateur radio operators.

If you don't feel like building , yo can also look around for another TEnTEc rig.. the Century 21. they are very simple and you can get them for 200 or under. they are still a qrp rig at a whoppping 25 watts out at best. I have been hamming for 21 years and it is one of the best i have owned and is my primary rig (ok only rig)
have fun an cu on the bands

Curtis D. Levin wrote in message <3647409d.0@207.226.241.101>...

| My family held a ticket, since back then stations
were
|licensed, not individuals. KYE4359 was our station callsign, and we were as
|strict if not stricter than hams are now. We were also very polite, used
|10 codes, had to identify, and had an emergency react team of about 300
|members, who used to meet once a week. CB was a wonderful thing, back in
|those days, and there was alot of friendship and cameraderie as a result
|of it.

We were KLP4199 and you're right there were rules and manners and around
76-77 we had many friends on the channels. For the most part, everyone used
AM and this was when the FCC increased the band to 40 channels.

Most people hung out on their favorite channels and I do remember some
misuse but they tended to stay on there own channel. For our city, channel 4
was the channel of ill repute and sometimes it was channel 19 especially if
"Cotton Candy" or "Lickerish" were trying to rendezvous with the truckers!

We did have some SSB activity but the number of friends on SSB was a lot
less. On SSB we typically used LSB on channel 22 and later on the 40 channel
rigs we used 37, 38 and 39. OBTW, when we were on SSB we used our names not
handles and used QSL, QRT, QSY and QTH etc. instead of 10-20 etc. Of course
our range increased because of the effective power boost (12 watts PEP).

| The major problem with
|CB is it predominately uses AM on a band that opens up for DX during a
|sunspot cycle. Multipath reception causing interference, that awful
|screeching noise heard on most CB bands during openings, is a result of
|that. Becuase so many cbs are running on the same freqs, and are channel
bound
|using AM, they naturally cause interference to each other. Newer ops who
|came along during the opening, who heard people talking over people, and
|causing interference, whether intended or not, adopted this as a method of
|CB operations. That's when the band went to pot. It made it thru two cycles
|previous to that without incident.

I attributed that screeching noise to be the beat frequency between the two
AM carriers which were not exactly the same (never were).

|It is a shame indeed that more people didn't pay attention to CB, and
|give them something more to work with than AM on a band that is prone
|to interference. CB'ers would be much better off in an allocated VHF
|spectrum using FM instead of AM< and the 27 MHZ spectrum could be used
|for alot more than what it's being used for now. Just some food for

thought.

Curtis, I think about the friends we met of the band, but I don't think 11 meters will ever be the same.

There is too much equipment out there capable of trashing it and therefore it would be trashed.

I think he is despicable.......I don't even watch him anymore.

That is why I'm so upset that our own would bring down Newt,
like the Weekly Standard, Arianna Huffington (she's probably
using the same political insight she gave her ex in his very
expensive & short political career. What a "winner" she is.

Our own did it, and the others are goating. I'm so disgusted.
I think they should just shut down the whole impeachment
hearings & close up shop for rest of this year. I'm not even
watching them. Everything has just gone to "pot"! What a

bunch of losers alot of these people are.

I hate Bill Crystle....who does he think he is as well as the others.

He should just SHUT UP. He says more against Republicans than he does Democrats. And he is really what you would call a "neo-conservative" as is Bill Bennett, another bore.

Carl,
Checked your RF exposure lately? Sounds like a lot of power in a
small vehicle......however, to your question. I would suspect poor
regulation in your new alternator, have you tried the rig using
battery only and if so did it function properly? If space allows, you
might do what I have done: install in an unobtrusive place a deep
cycle battery and hook this to your car battery with a switch in-line,
make certain the battery is well charged; connect your radio power to
the deep cycle battery. Leave the deep cycle battery off-line when
starting the vehicle and warming up, once you are ready to operate,
switch the battery in-line and you're set. You can of course, run
from just battery power also and I encourage regular run-out of deep
cycle batteries. This is what I use, and while definitely overkill as
far as power demand goes, I have no problems with funny operation of
radios (did not before hooked up this way either) and no complaints of
alternator noise.

Hope this helps you with your endeavor.

Source record: 158415

Mark Erbaugh wrote in message <36470a77.6613829@news2.infinet.com>...

|I have been trying to formulate a comment to the FCC's NPRM to change
|amateur radio licensing and while getting my thoughts together I did
|some thinking on the code / no-code debate. I would appreciate any
|reasonable (no flames, please) comments.

One class that you should pay attention to, is the people right in the middle of this, the Tech Plus Class. According to the FCC NPRM and the FCC Errata to the NPRM Tech Plus Class will be renewed as Technician Class. This is a downgrade and it throws the Tech Plus Class licensees off of the HF bands. Read my posts from earlier today on the 'policy' newsgroup I have itemized how I feel about 1(B) and 1(C) which only demostrates speed and that one element 1(B) keeps we Tech Plus Class license holders from a MULTITUDE OF HF/MF PRIVILEGES (just absolutely ludicrous). I call this move descrimination because the FCC is moving to grandfather the Novice Class in the same documents! They fail to see that the Tech Plus Class is a combination of both Novice Class and Technician Class and thereby outrank each of them.

|While I can agree with points made from both sides of the debate, I am
|leaning towards the no-code side. I enjoy operating CW, but I don't
|see how the requirement of code skill helps amateur radio nor how its
|elimination harms it.

The 5 wpm Element 1(B) should be more than adequate for International obligations and I think 13 and 20 are not needed for the ITU.

|It is apparent that the CW requirement is a barrier to a lot of
|potential hams, and I feel that we need to revamp the hobby to attract
|more members. I don't know any statistics, but I can say that after a
|few years of being off the air, when I returned, I now notice a lot
|less local (Columbus, OH) activity than there was when I left.
|
|My main concern about the elimination of a code requirement is that it
|could increase pressure to eliminate CW subbands or could cause the CW
|subbands to become overrun with other digital (RTTY, etc) modes. I
|think that CW should be preserved for those who want to use.

If the bottom of each band were reserved for CW only that should ensure what you require. Also, a gentlemens agreement that at least 18 wpm or some such in that section of the band could be good for CW think about it.

|I recommend that, in as much as possible under international
|agreements, that the CW requirement be eliminated from the amatuer
|radio testing, but that at the same time that certain portions of the

|CW subbands be set aside exclusively for CW operation, i.e. no other
|digital modes. I would also suggest that these CW exclusive bands be
|available to all license classes

That is a very solid stand I believe the NCI proposal of a "sunset clause" is the right solution for ITU requirements. But again let me say I worry about what the FCC intends to do with the Tech Plus Class.

> pricing levels -- after all, it's just a hobby -- right?

Yep, but I think when you look at the features you get on the new rigs, you will find them a better buy than the old ones. Also a 400$ rig in 73 wasn't even close to top of the line. My drake twins cost nearly 1000$ when new, and they weren't top of the line. At that time I think collins would have been I guess. At least as far as price anyway. But lets take say my old set of drake twins, appx 1000$ maybe a little more with speaker/power supply etc. You got dual vfo's, built in filters,notch, pasband tuning,and thats about it. In a fairly big set of boxes that have to plug in the wall. Then you have the tube aging problems to contend with. Now, lets take say my IC 730. Made in about 82 and could be had for 550 $ new if you went to the right place. Has dual vfos, passband tuning,memory's,runs off a 12v battery, and is 3 times as stable as the drakes.
No tube aging problems, mine still runs exactly the same today as when I bought it. Been a heck of a reliable rig for half the new cost of the drakes. When you look at the value of a dollar now compared to then, I think the new rigs a much better buy for what you get. Look at the little IC-706, can be had for about the price of the drakes when new, and does about 14 times as much. You can find good values still today, but they may not be in the top of the line rigs. So many bells and whistles that most won't even use. A waste of money for many. I remember when collins KWM-2's were going for 2,-3,000 bucks new. Compare to say a TS-870, which I think cost less then 2000$ in todays dollars. And about 14 times more radio than the old KWM-2. MK

Hello -

My vehicle is equipped with amplifiers for the audio system. Whenever I have my HT with me, I have to power down the stereo, otherwise the whole system gets a big 'thump', and it doesn't sound good on my speakers.

My question is, I am getting a Kenwood TMV7A soon, and will have an external antenna, are there any suggestions on what to do? I can try to mount the antenna as far away as possible from the audio amps... Maybe I'm out of luck, since this rig will push out more watts than my HT as well. TIA -

Ben

Hello John,
You can use a astatic hand mike if you want.
I have used one I my 229H for years. The
model I used was the Astatic 575 Teardrop
mike. All you have to do is get the wiring
corect on the plug which is very easy and
save yourself about $120. The mike goes for
about $40. That is on alternative.

Yep. I don't recall any "newsmedia exemption" in that law either.
They not only intercepted his private phone conversation but
they immediately used the material for their own profit. The feds
should persue criminal charges and Gingrich should file civil
charges to recover any profits made on what was his private
property. After relentlessly roasting Linda Tripp for a lesser
version of the same thing, ABC should have it's 'nads cut off
for this. "Free" press does NOT mean "without ANY boundaries
or responsibility".

Gee Masa, I wonder why? If you behave the same way on the air as you do on this news group does it suprize you that no one wants to talk to you? I travel 3 weeks out of the month and have had lot's of really good QSO's on 2m, one lasted 4 1/2 hrs while travelling late at night from Youngstown, OH to the other side of PA. We talked about all sorts of things Masa, DFing, contesting, homebrewing. Of course since you know nothing of these subjects your QSO probably wouldn't have lasted 4 1/2 hrs. As a matter of fact I'm sure you would have started your baby whining as soon as someone called so most of your QSO's are probably under 2 minutes.

You think because no one wants to talk to you that it's the same for everyone else. Your sadly mistaken Masa. So instead of learning how to make friends on 2m you spend your time here, telling everyone else how much ham radio sucks. How is it that others have so much luck finding good QSO's on 2m but you don't Masa? I thought you were out of ham radio? Why are you even calling CQ if ham radio sucks so much?

REVIEW: TOPO USA, DeLorme Mapping, 1998

Over the past few years I have reviewed many of DeLorme Mapping's products both printed and digital. The consistant high quality has always impressed me greatly. This year has seen a couple of new and interesting additions to their product line and TOPO USA is one of them.

Many people have a need for topographical maps that show elevation variances. These include engineeers, geologists, radio communications folks both professional and amateurs, outdoors types, RV'ers and so on. TOPO USA covers the entire country with seamless coverage of all 50 states. Thirteen magnification levels from 1" = 368 miles down to 1" = .08 mile as well as both two and three dimentional views as well as a trip profile display make this a very versatile package.

To make this package more interesting and useful it may be used with a Global Positioning System (GPS) reciever and a laptop or palmtop which shows actual position on the map screen. TOPO USA may be used with such popular palmtops as the PalmPilot Professional, Palm III or any other running Windows CE. DeLorme has developed a conduit called SOLUS MAPMAKER which permits downloading to one of these tiny units. TOPO USA comes with SOLUS PRO which normally sells for $40.00 and also allows downloading maps and routing directions from their Web site. In addition they have produced and market a reasonably priced GPS reciever called EARTHMATE that sells for around $150.00. I plan on reviewing both these products in the near future.

I liked TOPO USA and coupled with EARTHMATE it proved very useful to me. The graphics are nice and the 3-D view is pretty neat. I took SOLUS PRO on a notebook computer along on a recent trip to the top of Mount Mansfield with a friend who maintains several radio repeater sites. Although not specifically designed for this application, TOPO USA gave us an idea of what radio coverage might be like from different locations. The Trip Profile feature was particularly useful for this.

You will need Windows 95 or higher and a Pentium 60 or faster to run TOPO USA, but ideally 150MHz or faster to really enjoy it. It's a nice piece of work and many folks will find it very useful.

Several reasons Rambo, assuming you REALLY want to know. The ITU helps keep the bands in some sort of order, albeit not perfect much better than if it were a free for all. I suppose you'd be the first one to whine if Mexico chose your 'freeband' to run commercial RTTY traffic, when shortwave broadcasters in Canada pick 27MHz as thier new outlet who would you complain to then? The FCC? Where would you and your buddys go when the freeband is chock full of 500KW commercial utility traffic?

The City of Lafayette passes the ordinance last night. This ordinance
allows them to enforce any and all FCC regulations. They literary
copied the FCC rule book.

My grief is that, like the Brady Bill on guns, the Feds want the local
governments to pay to enforce the rules the Feds make. It is not
the local communities responsibility to enforce federal laws and
rules. Nor should the local tax payers be forced to to dollars that
should be going to local programs like roads and schools.
Thus we need to get the FCC to enforce it owns rules.

Are they aware of how often that rulebook changes ? and that if they do not now
monitor any changes
and modify their ordenances accordingly, they may find themselves in conflict
with federal law and thus
open to prosecution ?

It boils down to dollars. The enforcement arm of the FCC is very small and the interest of congress is almost nonexistent. Back when the fee for license policy was in effect there was money. All the FCC has to do is start up the fee policy and then use that money for enforcement of the service as the courts required.

Our family had one of the first 4X3 CB callsigns, KAAN-9730. It was
issued in 1977, or thereabout. As I recall, it was good for five
years.

I clearly remember the CB craze of the mid to late 1970's. There was a
fair amount of fooling around on the air, but anyone worth talking to
conducted themselves well and used their callsigns. If it had been
possible to eliminate the bad operators, the band would have sounded
something like the two-meter band we know today.

It is regretable that after the licensing requirement was dropped the
band evolved into the chaos we here today. In retrospect, I see that
the nearly trivial requirement to file an application and be assigned a
callsign did provide some small sense of accountablility.

Based on my own experience with an illegal ham radio station I'd say the FCC
hasn't the time nor manpower to mess with most cases. The problem was solved
only after a local prosecutor and a US Senator got involved.

>The better way would be to encourage your congressman to
>allow the FCC to keep all fines that are collected from violations

Incentive licensing in concept was probably a good idea at the time it was first discussed, but they way it was put into practice created a terrible situation which still has consequences today.

Sometime in the early 1950s, someone proposed that everyone who held a General or higher license be granted all amateur operating priviliges. It was about that time when the Novice and Technician class licenses came into being. The Novice was good for one year and not renewable. It was either up or out after that year. The Technician was designed for technical experimenters and was limited to operating priviliges, I think from 220 Mhz and up, with 50 and 145 Mhz being added later. In order to get the Technician, you had to pass a mail order written test which was the same as the General, and a 5 WPM code test if you were not a Novice and already had credit for it. I think that a Novice and Technician license could be held jointly by the same person if the Novice time limit had not yet expired.

In effect, the General class was the top of the line license as far as operating priviliges were concerned. After 1952, testing for the Class A (Advanced) license was dropped, although existing Class A holders could continue to renew as Class A.
No additional priviliges were granted to Class A operators.

This was the way of the ham radio world for 14 years.

In the late 50s, some deep thinkers somewhere decided that hams were not improving themselves for some reason. They were not changing over to SSB

as fast as they should and these deep thinkers thought it may have been because many of them were too technically ignorant about the then state of the art. In some quarters this was a scandalous situation. There was much discussion of finding a way to force technical competance via the testing and reserved operating privilige process. There was also some concern that many hams were letting their code skills slip because they spent too much time on phone. The appliance operator label was just coming into vogue, and it was thought that valuable design and building skills were being lost. This debate raged in the pages of QST for over 5 years.

The final result was that on a specific date in 1968, anyone who was a licensed General class operator lost a good amount of their operating priviliges on HF. Anyone who held the old Class A (at one time the top license in terms of operating priviliges) also lost a considerable amount, although not as much as the lowley General did. The Extra Class license became the new top of the heap and if you wanted your priviliges back, you had better pass the Extra exams with its 20WPM code requirement.

INHO the largest problems with Incentive Licensing were:

1.- Taking away priviliges that already had been earned. It should have affected new people entering the service, but everyone else should have been grandfathered.

2.- The most talked about reason, technical competance or the lack of regarding SSB had been effectively bypassed by the availability of commercial equipment which actually needed less ability to use than the old AM equipment. By 1968 the
technical argument was moot. Most of us were turning into appliance operators anyway.

3.- It caused a meltdown in the interest of ham radio in the years immediatly after 1968. Take a look at the size of the Cq, and QST magazines of that period.

4.- It was one of many reasons why American ham equipment manufacturers started to go out of business.

I will always believe that Incentive Licensing amounted to a power and privilige grab by a very few people in power at the ARRL who wanted what amounted to a "country club" operating privilige setting for the good ole boys in their circle. For a very long time I thought that the ARRL and the FCC thought that General class and below license holders were held in contempt. I was a memeber of a ham radio club in the late sixties which had a sign saying "ARRL's definition of a real ham...Extra Class License... 2 letter call" It took a long time for me to get over it.

It is interesting to note that the ARRL is doing everything it can to make sure that no one looses operating priviliges with the coming license restructure. I think this stems from bitter past experience.

From ARRL Headquarters
Newington CT November 10, 1998
To all radio amateurs

SB QST ARL ARLB097
ARLB097 FCC Declares Communications Emergency

Hams not involved in handling emergency traffic must keep away from
14.265 MHz under an FCC mandatory communications emergency. The
communications emergency was declared to support the Honduras
disaster relief effort.

Under the order, amateurs are required to refrain from using 14.265
MHz (plus or minus 3 kHz) unless they are taking part in the
handling of emergency traffic.

The order, issued November 10 by Deputy Chief Arland K. Van Doorn of
the FCC Compliance and Information Bureau, remains in effect until
rescinded.

> only two...count 'em, TWO stations with a check of 1990 or later.

I worked just a little bit of the contest. My first contest, I
gathered a princely 16 QSOs (didn't have a lot of time). Yet out of
those 16, 3 had check digits of 1990 or later. I also spent most of my
time at xx.080 or higher frequencies.

> Guess it should be no surprise, but even the novice bands were pretty
> quiet. The contest was full of older folks. Where were
> all the 20 and 30 year old ops (or younger)?

A couple of observations come to mind. First, unless one is a
real dab hand at CW, there simply aren't a lot of opportunities to get a
QSO in the SS. The lower edge of all the bands is a huge mass of very
high speed CW. If your CW copy speed isn't at least 20-25 wpm, there are
very few CQs to respond to because you can't copy the call.
Sure, the upper band is open, but that's the problem...it's open.
Not too much activity there, and since much of it extends into the novice
bands, there are a number of low speed non-contest QSOs going on.
I think the idea of a CW contest scares people. I know it did me.
I have only been licensed for 3 months, and on a really good day I can
copy 16-18 wpm CW. I was very concerned about "looking foolish,"
although that changed pretty quickly. Still, the guys at the lower edge
were blazing along, and I didn't feel like I was helping by slowing them
down.
BTW, don't misunderstand me. I have only the best to say about
the contest folks. When I did stray down into "high speed" land and
managed to copy a call or two, the other operator never failed to QRS and
repeat as often as needed for me to get the entire exchange. That is
better behavior than I have noticed in general day to day operating. I
have often asked someone to QRS, been given a gust of high speed code,
and left with silence.

> No...this is not meant as a debate for or against CW. This is
> a CONTEST question -- why are younger folks not interested in
> "Radio Sport" or contesting?

I don't know if I am younger or not. 37 years old, licensed in
1998. Anyway, I had a good time, and will set aside more time the
weekend after Thanksgiving for the Phone SS. I certainly will feel a bit
more comfortable about my ability to understand.

As for contests in the future, I will continue. It is really just
a matter of setting aside the time. I'll even do CW contests...

Another viewpoint on this: been licensed about 2 years, Extra,
can hold my own at 20 wpm, but contests do just not turn me on.
I'm a ragchewer by nature and passing around nrs in 30 second
exchanges is just not my cup of tea. Maybe the contest bug bites
later in the average tenure of a CW ham?

When you say you are "monitoring", it means you are available for a QSO.
"CQ" means you want a QSO. "CQ" is impolite on VHF and most hams I know
would not respond to such an impolite person. Last field day, I heard
some comedian calling, "CQ Field Day" on a 2m repeater.

> Why should 2m or
> 70cm FM be any different than any other bands/modes discounting the
> duration of a CQ?

When you deliberately isolate one group of hams from another, differences
will be the predictable result. Thank the ham radio caste system for the
differences in operating procedures between HF and VHF.

I live in an area where, for various reasons, antenna reception is pretty shoddy.

In an effort to improve things, I purchased a Gee-Whiz 1000 powered antenna, with an adjustable gain.

It did help with the reception, except when: the computer was on; the coffee grinder was going; the blender was blending; etc.

Did take me a bit to figure out that it was the antenna, but I did immediately realise that *something* in my home entertainment system was not shielded adequately ...

Type acceptance still applies. The crappy design still MUST put out a
clean signal. No requirement sits on the TV designers to make them
reject clean signals.

This is so ridiculous -- I'm cutting and pasting this now, because people
keep ignoring it. Read it off the back of your monitor, will ya??

This device complies with part 15 of the FCC Rules.
Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received,
INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRED OPERATION.

> can) cause interference.

Even a transmitter that meets all specifications for suprious signals
and harmonics (a clean signal) can still cause interference due to the
fault of the device receiving the interference, not due to the fault of
the transmitter. Very few of todays electronic devices can operate in a
strong RF field without interference due to poor design, filtering, and
shielding. By the way, type acceptance does not guarantee that every
transmitter that comes off the production line will be absolutely clean.
Lots of cb equipment that is type accepted proves that.

2623. Yaesu handheld/RS DSP unit

Newsgroup: rec.radio.amateur.misc

Hi, have for sale the following:

1 Yaesu FTH 7009 UHF handheld radio, 6ch, 4 watt, has dtmf option installed.
bandsplit it 450-470 (D2 version radio). Probably won't do ham band. Will
probably need new battery too, and the small tab on the battery lock is
broken, but batt. stays on fairly good... includes NC-40 rapid/slow
charger.Questions? please email.
asking $75 and you ship. radio works fine.
also have radio shack DSP unit in great shape for $30 and uship.
thanks,
Randy

2624. FS: QST 1928 to 1975

The following QST's are available. Unless otherwise noted, years are complete. I have some multiple sets of some years as noted also.

1928, 1929, 1933, 1935, 1938, 1939(10 missing), 1940, 1941(6 missing), 1942,1943,1944,1945(3 missing), 1946(1 missing),1947(2 sets), 1948, 1949, 1950(+3 extra issues), 1951, 1952(2 sets), 1953(2 sets) 1954(2 sets), 1955(2 sets), 1956(2 sets), 1957, 1958(2 sets), 1959(2 sets), 1960(2 sets), 1961(3 sets), 1962(2 sets), 1963(2 sets), 1964(2 sets), 1965(2 sets), 1966(2 sets), 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975 All in good to exc. shape. one or two have loose covers.

All for $195. Pick up near Boston, MA preferred. Could meet someone 1/2 way anywhere in New England. Shipping would be a bit of $$$ but could be done. They are in 9 heavy boxes!!

regards,
Chuck...

2628. RCS-4 Coax Switch - HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-11 00:00:00 UTC
From: John & Annette Nicholson <dx@netbridge.net>
Message-ID: <72du10$72q$1@supernews.com>
Source record: 158219

Has anyone run into this problem with their coax switch?
Antenna ONE doesn't work if anything is connected to
Antenna FOUR on the relay box. If I leave Antenna FOUR unused,
ONE works fine. As soon as I attach another antenna to
Antenna FOUR, ONE does not work correctly.

In particular, I am having troubles with this strange
problem when I run 500 watts through the relay box...the
Ameritron AL811H senses a bad match and won't tune up
properly. On low power, 100 watts, all seems to work OK
when antennas are connected to ONE and FOUR. But when
running high power on Antenna ONE, I must disconnect the
Antenna on FOUR.

Sound familiar? What's the repair to fix this?

Thanks

John K7FD

2629. logs for IIA TROPHY 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-11 00:00:00 UTC
From: Crazy DX Group <crazy@grisnet.it>
Message-ID: <72dsc8$rg5$9@nslave1.tin.it>
Source record: 158220

I.I.A. (Italian Islands Award)

1998 I.I.A. TROPHY

Dear OM/SWL,

in the last weeks we are receiving the logs from the "1998 I.I.A. TROPHY"
participants.
If you wish to participate, send us the log of your QSO/HRD with italian
islands between June 1st and September 30th. You can also send the log by
the internet to: crazy@grisnet.it
73 and thank you very much for your participation.
Rules are the following:

I.I.A. Italian Islands Award

-- IIA TROPHY - 1998 --

(Rules for NOT ITALIAN participants only)

This Trophy is issued by the Crazy DX Group.
All OMs and SWLs (world-wide) can participate.
The aim is to contact/hear/activate the largest number of different
Italian islands.
Only islands with references from the official IIA list will be valid.
References released after the Trophy's start date are also valid.
Participation is free of charge.
Good hunting !

PARTICIPATION PERIOD

From June 1st to September 30th 1998.

BANDS

Every qso/listening/activity on every amateur radio band will be valid.

POINTS

Each different Italian island contacted/heard/activated will count 1
point.

CATEGORIES AND PRIZES

There are 5 categories: OMs (outside of Italy), SWLs (outside of Italy),
DX-PEDITIONERS, italian OMs, italian SWLs.
You may participate in more than 1 category. Points for different
categories cannot be mixed.

In the DX-PEDITIONERS category, the participant must be the holder of
the callsign used in every activity.
A plaque will be awarded to the top scoring participant in each category,
and a certificate to the second and third.
If you want to receive the booklet with the results by post, please send a
SASE together with your log.

LOGS

Complete logs with data of every qso/heard (callsign, date, UTC time,
band, mode, IIA reference, correspondent callsign for SWL category)
should be sent to the following address by November 30th 1998.

CRAZY DX GROUP - P.O. BOX 11 - 04011 APRILIA - ITALY
or by email: crazy@grisnet.it

For DX-PEDITIONERS category participants, it will be sufficient to send
the complete activities list (dates, callsigns used and IIA references).

CRAZY DX GROUP
P.O. BOX 11
04011 Aprilia (LT)

You must be the moron. We are not just talking about CB but any radio. How is your local cop going to know if the readio is CB or not. You will have to prove that. Do you know that a legal 2 meter rig running at 145 mhz will cause certain cable channels to get interference. There are two cable channels here in my area that are on 144 and 145.250 mhz. When I transmit on packet, 145.070 legally, I interfer with those two channels. A cable system is not 100% effective in cutting out radio interference. To fix the problem here the cable company put the same programming on the "B" side cable but on a different channel.

Rick,

it's the HAM RADIO in Friedrichshafen, Germany (next 6/24/99 to 6/26/99)

Please look at www.friedrichshafen.de, then "Messe", or directly
http://www.messe-fn.de/messe/fair.php3?fair_id=8&fair=HAMRADIO
(in german)

Jerry, you are missing the point. Even if you have done all that you can do
to clean up your equipment, there are still many "passive" devices out there
that can pick up your so called clean operation. It happens. Just because
you don't know about it doesn't mean it doesn't happen.

Richard: 11 Meters is what CB Radio is allocated. Channel 1 thru 40(26.965 thru 27.405)
If you have a 40 channel CB radio it should have the channels listed. If you have a converted Ham rig the channels will be listed as frequences.
AM will be a place to get started. Channel 19 is where youwill find truckers.
If you have sideband that is much better

I was informed by a colleague that in this world where almost everyone wants to be a computer engineer, there is a serious shortage of RF engineers. There is a BIG demand for them, as someone has to design all these cellular, PCS, Iridium, satellite, etc. systems. And he told me that being a radio amateur is a plus in getting a job as an RF engineer.

Sorry, but you are the moron.
You obviously know nothing about the physics of electronics and radio ommunications.

> Last time I checked, my cable has a shielded cover. And even if you get the tv
> through the air, a legally operated cb should cause a problem.

What does a shielded cable have to do with anything ??
The screening is there to maintain a constant impedance of the cable as it passes close to things with different dielectric properties. It is NOT to stop the signal "leaking out" as many
people (yourself included) seem to think. Ever hear of balanced feed lines ? These have no scree
and radiate nothing.

It is usually the TV which is the problem, the are poorly designed and constructed and susceptible
to interference fromalmost anything. This is why the FCC will take no action provide that a transmitter
is operating correctly.

> SOMETHING YOU ALSO FORGET, people can use 4 watts and have a clean cb but use
> illegal attenea's or other devices..

This will raise the EIRP a bit, but if the signal is clean will make no difference.

> MODULATORS are also used..

Dimwit !!! dou yho know what a modulator is ????
A modulator is what puts the signal onto the carrier wave.
Without a modulator no information is carried on the signal.
GO buy a book on radio communication basics 101 !!!

> Like I said, we're talking about someone causing enough of a problem that it
> prevents a person INSIDE THEIR HOME [minding their own business] from watching

> NAAA!, after all he has his rights!!

You have the right to demand of TV manufactureres that they produce equipment which is capable
of rejecting reasonable levels of signals outside the reception frequency. They don't. Their
problem
for building it that way, and your problem for buying the cheap junk - you go taken - well - tough
luck
now stop tying to make YOUR problem into someone elses problem.

And if you are going to try to do so at least EDUCATE YOURSELF - its fine being a moron talking to a bunch of other council morons, but in the real world illiteracy and stupidity don't
help
your case one bit.

Philip

Diaper_Reagan wrote:

> I would assume my right to operate a passive device _inside_ my home is more
> to be defended than a person's right to transmitt?

You would be wrong.

Correctly designed equipment will not suffer this interference.
Look on the back of your TV etc - there is an FCC notice which explicitly states that you MUST accept interference. This is because the consumer electronics industry
refuses to spend the extra 10c to design and build equipment which will reject such interference.

The FCC allows sub-sandard equipment to be built and sold provided that it carries those
warning labels (what ? you never realised that they were even there ?? - caveat emptor).

You accept those terms when you buy it. If you don't like it, buy correctly designed and built
equipment (and good luck finding it - the consumer electronics industry has ensured that you
won't).

Philip

When you picked out that new TV one of your considerations was price.
The manufacturer knowing this, and also to increase his profits builds
that TV at the lowest possible cost. Part of that low cost is not what
is in the TV but rather what is left out. The manufacturer puts in
minimal shielding and designs circuits to use the lowest number of parts
and the least expensive parts. The result is TVs and other consumer
electronics which hears signals which are not meant for them. As for
rights, both the TV watcher and the radio operator have equal rights.
The TV viewer has another right that you are ignoring, the right to
demand properly built consumer electronics, not just the cheapest. Why
should the radio operator be penalized because the TV manufacturer
short-cut the design of the TV? Lets put the blame where it really
belongs in this issue.

I think you need to go back and re-read the regulations - and include Part 15
which unequivocall
states that "This device must accept any interference received". I can't thik of
a single piece of consumer
electronics which does not have Part 15 acceptance.

You are correct if the interference is caused to protected services.

Simple. If he didn't have that "passive device" he couldn't hear the
interference.

>
> CB's are only legally allowed to broadcast at 4 or 5 watts, which would
> *NEVER* cause problems for tv's.

Wrong! I had a neighbor that threw out his old Zenith TV and replaced it
with a brand new Sony. All of a sudden he can now hear me through it. He
had never heard me before on the old set. He wanted to know what I
changed, and swore I was running illegal power (Another knee-jerk
reaction by the uninformed masses). I countered by asking him what HE
changed. When he told me that he just got a new TV, I suggested that
MAYBE that might be the problem. He then made another brainwashed
consumer statement, by telling me "But it's a SONY, how can that be the
problem?" I then took my 2 meter HT, and my neighber to the local
appliance store, where they had several brands of TV's on display. I
keyed the HT near each one of them and observed the interference. Funny
thing, the Sony was the worst!

And TV's aren't the biggest problem. Stereos are far worse, with long
speaker wires that act like antennas. And cordless phones too. I have a
neighbor that lives 5 doors away, comment to me that he can hear me

faintly in the background, when he uses the cordless. Now I'm running legal power, with an external TVI filter, grounded antenna, and I've checked the output on a spectrum analyzer, and any spurious and harmonic output is well within the -60 dbc specification. MY station is clean, yet we continue to get a bad rap from people like you that think that every RFI problem is the result of illegal power. I'm sure the manufacturers aren't going to try to dispell this rumor, since it will expose their improper RF immunity practices.

> a cb is not a right in the constitution
> last time I checked...

Neither is the right to watch TV.

> Simple:If some police keys your mic and a nearby tv flickers, then your
> equipment is illegal and SHOULD be taken from you and you should pay a large
> fine for being a smartass.

Your lack of RF theory is showing here. A spectrally pure, legal power signal, CAN and DOES cause overload to inferior receiver designs

> I hate people who think their rights are superior.

You should practice what you preach. Since when is YOUR right to watch TV a priority over MY right to engage in meaningful conversation and good natured fun over the airwaves?

Your listed ISP pretty much says it all. Typical liberal mentality, defer responsibility to anyone but yourself, and make everyone else stop enjoying themselves and their hobbies, simply because you are an uninformed consumer and bought the latest "bargain basement TV". Have you ever heard of the phase "You get what you pay for"?

Hello all! Just wanted to drop a line to let all of you know that there is a new way to post your advertisements if you have something for sale, something you are looking for, or just have information that you want to share with others. Kinda like this ole newsgroup. If you would like to join the list and receive mailings from people with their goods for sale, and also to be posted of specials that we may be running at CB City, go to the CB City website at 'cbcity.com' and follow the instructions on the main page. I will do my best at keeping problems to a minimum, by not allowing people to flame others or to try and piss people off. This will not be for that purpose, and never will be. I hope that you all join the list, and if I can do anything at all to help you, please let me know.

If you would like to send email to the list, send it to:

cbstuff4sale@listbot.com

Thanks from all of us at CB City.

Dean

I am looking to purchase a VHF/UHF dual band amplifier for my Yaesu FT-50.
The choices I have seem to be the MAHA MH-A201, MH-A302, and the Mirage BD-35.
Does anyone have any comments on these amplifiers before I decide on my own
with what little info I can find out there?

My apartment has great interence receiving AM radio if
the next door switch on the TV (Although I have the AM loop
antenna by the window), also, the FM is more noisy than then tuner
in my car.

I'm wondering if I replace my radio antenna with the market
in-house radar-shape antenna (cost around $30) could improve my
reception?

Thanks

I suppose that's okay but are you indicating that you are listening or are you indicating that you desire a QSO by doing so? When I key the mike, I'm trying to let others know that I desire a contact. I really don't need to let anyone know that I'm monitoring. Why should 2m or 70cm FM be any different than any other bands/modes discounting the duration of a CQ?

Yup! It's true. Some consummer devices are so poorly shielded that nearly
anything will cause interference. I know of one case where the electronic
siren on ambulances caused one person problems with her TV. She was
blaming an amateur who had just moved into the neighborhood and our club
interfence team went out to help resolve her problem. Long story but true.

>
> Last time I checked, my cable has a shielded cover. And even if you get the tv

EVERYONE knows that even if you are operating legally that you can cause
problems for nearby consummer appliances. Why didn't you?

Did anyone say that? Before you run off at the mouth perhaps you might
like to ask a more genteel question. Try something like "What does one do
if there is an interference problem?"

Since you seem determined to be obnoxious then you could check with the
FCC. They used to have this really good brochure on the that very subject.
If you had asked nicely then many hams would have gone into substantial
detail in helping you with your problem.

Lets set some rules. One, Linda Tripp used conventional
wire recording which can or can not be prosecuted depending
on the state. Two, criminals can be wire tapped only if the
courts issue a warrant. There have to be safe guards.

Now as to Newt and the interception of cell phones. We who
are amateur radio operators and who are scanner buffs have
had restrictions placed on us via the previous Democratic
Congresses in the form of the Electronic Communication Protection
Act of 1986 (ECPA). The first two violations are Democrats
who are spying on political figures. All we want is that these
people be held to the same standards we little guys are held.
Or that the law be repealed.

There it is in a nutshell. As long as the Federal government refuses to
fund the FCC with suffcient resources the enforcement arm will be all but
useless.

Note that when immigration became a high very visible political issue the
INS started to get the resources they had been begging for for years.
Perhaps if the commercial stations and cable outlets were starting to
experience serious disruptions to make an issue of it on the 6 oclock news
then maybe our congressional critters would start to fund the FCC as it
should be.

Thanks for the info, Mr. Kane and 73's

>******************
>Adam Adkins, KM5SS
>adam@onramp.net

Adam has some very good points when it comes to CW contests. I'm 39 years old and have been a ham since 1976, however, I have been out of the hobby for the past 8 years. I just this year got back into it and I have spent most of my time on CW on HF. Getting my code speed back up is what I have been doing on the HF bands.

I must agree that the idea of a CW contest does scare me a little. I did make some contacts on the TenTen contest a week or two ago. But I thought, if someone wants points that bad, they will answer my slow CQ's, and a few did. From that I think I found how to work a CW contest when your are a little slow like me. Just find a quite spot up the dial and call CQ. People will come.

I think for the most part, CW operators will put up with slow CW stations knowing that that is better than no new CW stations. If all CW stations were fast then you have no new comers and by that CW will die.

The same could be said for your radio. The manufacturer builds
the cheapest set he can, and as a result it leaks RF into all
sorts of bands it *shouldn't* be sending.

In preparation for the Y2K event it would be highly desirable to
modify my standby generator to accept propane and/or natural gas as an
alternative to gasoline. Local sources and the WWW have not provided any
information.
Can anybody give me a pointer on how to convert an 8 HP Briggs and
Stratton to LP or NG???

BTW, the Y2K scare is wonderful, the XYL is letting me buy all
sorts of new toys to prepare for the new millenium!

No, both a radio operating in compliance and a TV operating in (part 15)
compliance can cause the TV to misbehave. This isn't hard -- read it
slowly, here, or on the back of or underside of your TV:

This device complies with part 15 of the FCC Rules. Operation
is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received,
INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRED OPERATION.

>> Why
>> should the radio operator be penalized because the TV manufacturer
>> short-cut the design of the TV? Lets put the blame where it really
>> belongs in this issue.

> That would have to be the radio operator...

Read it again. Last sentence.

The radio transmitter is responsible for having a clean signal. The
television receiver SHOULD reject signals (when it can -- fundamental
overload is a good example of when it can't) but the FCC doesn't
REQUIRE the television to reject unwanted signals. That lets the
designers save $0.30 per TV and up their profit margin by that much.

>letter calls to?

Simple:
The FCC mandates all U.S. amateur licenses to expire at
11:59 p.m., UTC, December 31, 1999.

The FCC mandates all current amateur radio licensees must
re-test prior to that date and time in order to be licensed
at the level of examination for which they pass all the
required components. Prior license level irrelevant and be
damned; no "grandfathering," no "good ol' boy" actions
permitted.

A 90-day grace period, beginning 0:00 a.m., UTC, January 1,
2000, will allow "last-minute exam-takers" to continue
operating while their examination results and applications
are processed.

Those current licensees who do not re-test, or who the FCC
says are not yet certified as licensed by the end of the
90-day grace period, must cease operating until such time
that they re-test and are officially certified by the FCC as
licensed.

Piece of cake.

Everybody wins: Equal opportunity testing; trying out the
new licensing standards (whatever they come to be); more
stuff for the VECs, ARRL, Fred, et al, to do.

Now *everybody* can whine ... ;0)

While I am certainly not questioning anyone's personal experience, the ARRL independently reviewed both the ADI AT-600 and the Kenwood TH-G71 in the April 1998 issue of QST magazine. The ARRL's lab measured the AT-600's VHF receive sensitivity at .13 uV for 12 dB SINAD. The TH-G71 was measured at .16 uV for 12 dB SINAD. According to the ARRL lab's independent test the AT-600 actually has better receiver sensitivity than the G71. ARRL members can view this review on the League's new members-only website. Just go to www.arrl.org and click on the section marked "members."

The way you will "clean it up" is to confront these flaming assholes who jam
at the hamfests, in person. The problem you see is that commensurate jammers think
all this bullshit dissappears into the cabinet of their radio when they throw the switch
to the off position, like it is some kind of a kooky virtual reality thru the radio
speaker.
Just let word get out that one of the well-known jammers got their clock-cleaned and this
crap you hear will dissappear in a New York minute. They'll probably shit in their pants
just from being confronted in person, which should do it.

A TV set a passive device? Where'd you get *your* EE?

>when cb'ers are

> broadcasting [an active transmitting device]??
>

So? A TV set not designed to receive a radio signal outside its passband SHOULD NOT receive any such signal. This should be required by FCC regulation, but the manufacturers have successfully lobbied against such requirements at the FCC. So no consumer product is required to be immune from RFI. Is that the fault of any radio transmitter whatever the service? Not just no, a thousand times no! If the transmitter can be shown to be clean, but still affects a TV with RFI, there's nothing more that transmitter owner can do.

That is right, and often these illegal transmsitters/amplifiers are transmitting spurious trash on a wide range of frequencies. So they should be taken off the air. And what has any of this to do with ham radio?

Dick C

> How can you place blame on tv owners [a passive device] when cb'ers are
> broadcasting [an active transmitting device]??

Simple. ANY transmission can cause receiver overload. The transmission can be perfectly legal both in frequency and power. Yet, receiver overload can occur. In that case the owner of the receiver (ie TV) is responsible for making any/all alterations necessary to stop the interference. While the person producing the transmission should assist in the interest of public spirit there is no law that requires them to lift a finger to help. Normally this isn't a problem since the simple and free advice that they check the cable and connections on their antenna and cable, and if that does not solve the problem to add a cheap (under $5) high pass filter (can be purchased at almost any TV store) to their antenna cable.

> CB's are only legally allowed to broadcast at 4 or 5 watts,

4 Watts.

> which would
> *NEVER* cause problems for tv's.

Wrong. Such a power level can produce interference even with an omnidirectional antenna. A Yagi (or other directional ant.) would be perfectly legal and would concentrate the power in a particular direction extending the range in which interference is likely possible.

> Only those using 100 watt linear amps would
> have any reason to fear being arrested or their equipment being taken.

Wrong. Anyone using more that 4 watts would have reason to fear being arrested and their equipement taken since that is the MAXIMUM legal power for that band.

>Those
> linears are illegal to begin with

Wrong. Most of those linears are legal, just being illegally used on the wrong frequency.

> and a cb is not a right in the constitution
> last time I checked...

So you think no one should have access to radio communications?

Sorry, but while rules have to exist to govern the even and fair use of this public resource, to deny that we should be able to use it is silly. It would be like having a highway that no one can drive on.

> Simple:If some police keys your mic and a nearby tv flickers, then your
> equipment is illegal and SHOULD be taken from you and you should pay a large
> fine for being a smartass.

Well, shows how much technical experience you have. A PERFECTLY legal system CAN cause interference in certain situations, even those in which there is NOTHING wrong with the installation or operation of the CB station. Such as reciever overload, bad ground connections on the TV's coax. poor selectivity in the TV, ect, ect, ect. All of which can produce TVI, despite the CB being perfectly and totally legal in all respects.

> I hate people who think their rights are superior.

You mean like people that think their right to watch TV is superior to another's rights to use radio communications?

Yes.

>
> Last time I checked, my cable has a shielded cover.

Have you checked to see if all the connections are clean and tight?

Have you checked to see if the cable is damaged?

If not then you don't know if that shielded cover is really grounded, if it's not then it doesn't shield anything.

> And even if you get the tv
> through the air, a legally operated cb should cause a problem.

I'm assuming you mean shouldn't. Normally no, a legal CB shouldn't cause a problem, but exceptions exist. What I would do, rather than bitch that everyone should halt their activity because of YOUR problem. Is to first INSURE that you DO have a problem. First, check, clean, and tighten all coax connections. Inspect the coax cable for signs of damage (including being crushed). Add a high pass filter to your coax cable. If none of these work attempt to redirect your antenna (which is directional) and see if you can obtain your signal from a different direction. TV signals are often bounced from natural and man-made structures. CB on the other hand is low enough in frequency that it does not reflect as much. If you can NOT solve the TV interference, borrow a CB from a friend and when you are getting the TVI check the channels to see if any transmissions are matching the interference on your TV.

It's also possible that a local ham operator could be causing the interference. Both 10 meter & 11 meter (CB) can cause interference particularly around channels 3 and 4.

However, if you can identify the sender (or can talk to them) inform them POLITELY that they are causing interference with your TV, and could they attempt to change to a different channel/time, or at least work with you to see about what can be done to eliminate the interference. Most people will work with you, if you are polite. If you get snotty with them, then expect the same in return. Remember it is entirely possible that their legal transmission could be causing you interference, and if their transmission

is legal they don't have to do a thing to help you. Most will (particularly hams), but politeness and friendlyness is the key.

As a last resort you should inform the FCC office closest to you giving them as much information as you can provide. Dates, times, names, frequencies or channels, ect. Then don't expect an immediate response.

> SOMETHING YOU ALSO FORGET, people can use 4 watts and have a clean cb but use
> illegal attenea's or other devices..

You also forget that even at 4 Watts a perfectly clean CB can cause interference in a less than perfect TV.

> MODULATORS are also used..

Yep. However, you don't know this. All you really know is that you have interference and suspect that it's illegal CD. It may, it may not. It might be as simple as cleaning your coax connections or it may need the intervention of the FFC to fix, or it may be the result of a legal transmission at which point you have to try other solutions. Check your local ham group for help, suggestions, ect. They have the knowledge, equipement and resources to determine the causes and potential solutions.

> Like I said, we're talking about someone causing enough of a problem that it
> prevents a person INSIDE THEIR HOME [minding their own business] from watching
> the tv without trouble.

It may also be your set, cable, or antenna. Have you even CHECKED you cable?

Probably not.

Hint: while maintaining a CB helps prevent interference, so does maintaining your TV installation.

> Go ahead and support the cb'ers, you have already made it clear you do.

No, you are jumping about like a cat with it's tail caught in a box. You need to calm down and determine the cause (not just what you think it might be), and research solutions. Many interference problems can be fixed simply by preforming a bit of maintaince of the coax, or possibly adding a high pass filter. First check to see if there is anything YOU can do to eliminate the interference. If that fails attempt to track down the source, working with them may all both of you to obtain a solution suitable to both of you (which may as simple as not transmitting during the big game), ask for help from the local ham group (for either of the above), last report the precise details to the FCC and hope (and endlessly wait) for them to produce a solution. Needless to say the first 3 are most likely to produce a quick result than is the last.

> I hope someone moves into your neighborhood and transmits 24/7 with a 10K watt
> unit.

Why?

> Gee, wonder if you'd even complain???

Probably.

> NAAA!, after all he has his rights!!

True, but then he is acting outside his rights. A factor that you have yet to even confirm. His actions may be legal and he is totally within his rights. Now what? Didn't you just bitch about people that thought their rights should be superior to others?

Thanks Michael for your suggestion. In the local library I checked in a battery reference book. It confirmed that mercury batteries (1.35 volt) were often used as a secondary voltage reference. Unfortunately, because of environmental problems associated with mercury, the local electronics stores no longer stock mercury batteries. I'll have to see if I can locate a source for such batteries.

Again, thanks.

Diaper_Reagan <CHECK_MY_SIGNATURE@EMAIL.COM> wrote in article
<36495c57.41227034@news.mindspring.com>...
> No one has offered what a person is suppose to do with a brand new tv set
that
> he/she cannot use because of some legal cber next door?

Well, first insure that the problem does not rest in YOUR installation.
Next, add a high pass filter to your system. Finally work WITH the legal
CBer to resolve the problem. The 1st two will eliminate over 98% of TVI
caused by legal CBs.

> So we just accept this?

Nope, but you don't demand that he stop his legal activities either. He has
just as much right to transmit as you have to watch. So who should be
right, both or neither.

You don't normally have to accept it, but you also don't necessary get the
best solutions by getting in a fight with your neighbor over it either.

> Can I assume that all of society runs this way?

Yep.

> If my neighbor wants to have a picnic in my yard it's okay because
picnic's
> aren't against the law [and just because he is in my yard isn't the
issue[??

No that is not the issue. Wait, let's make it similar. He's having a picnic
in his yard. You are a vegaterian, he's grilling hamburgers (in his yard),
the smell is blowing down wind to your yard. You don't like the smell. So
what should you do? Demand he no longer have picnics in his yard, go inside
out of the smell, or attempt to coordinate your activites so that he isn't
grilling hamburgers while you are trying to relax in your yard?

You can't have your own way all the time. You are both engaged in lawful
activites, and sometimes that produces interference. You don't fight over
it like children. Rather you work together to resolve the difficulties (and
problems) like the grown up adults you should be.

> You guys must admit you've defended an action that isn't worth defending.

You should admit that sometimes another's lawful activities are going to
interfer with what you want, and that is a fact of life. You can either
learn to deal with it in a intelligent adult manner, or go around whinning

like a small child. The choice is yours.

> So, what are we suppose to do about the problem?

First see what you can do at your end to end the problem. Then ask your neighbor what he can do to end the problem. If that doesn't work you both ask for advice for a solution to end the problem.

Doesn't it make you wonder when you have to explain such simple adult concepts to someone that should already know them?

>
> I would assume my right to operate a passive device _inside_ my home is more
> to be defended than a person's right to transmitt?

Wrong. Your device is NOT passive. It too can cause harmful interference if it is not functioning properly. However, to answer your question. It does not matter if the set is passive or active. HIS rights are just as important as your rights. When problems develop as a result of both of your legal activities, then you WORK TOGETHER TO RESOLVE THEM.

> service as the courts required.

I understand that present Federal law requires that collected fees go to general revenue, not to fund the agency which collected them, and that all agency expenditures be budgeted by legislative act (passing a new law) annually. So it would take a change in Federal law to make it possible for the FCC to collect fees and keep those fees to fund *any* of their operations, including enforcement. Not a likely prospect since other agencies would want to follow suit, and a real nightmare of oversight could easily occur. Imagine what some bureaucrats could do with the authority to collect their own funding from those who they deal with daily.
When viewed in this light, the scope of the problem becomes more clear

No, it's not that difficult. Hunt around for an attorney both smart enough
to see the legal merits of the case, and also willing to take your case on a
win only commission. It IS possible if you work at it a bit to take these
councelmen to the cleaners.

> "I wanna hear him TALK TO UGH!!"

Wrong answer. Each semester I spend four months with 100 new college freshmen (four classes with 25 students in each class) trying my best to teach them some elementary mathematics. During my lectures, some sleep, some stare off into space, some have blank expressions on their face as if they're drugged; only a small number of them take notes attentively. Prior to an exam, I'll provide examples on the board as a review, then take some of those actual examples and place them on the test. You would think that everyone would at least be able to determine the correct solutions for those particular problems, having seen them earlier in the week. Think again. One of the classes we offer is titled "Pre-college Math" and consists of 5th-8th grade arithmetic - shameful that such a class should have to be offered - yet all ten sections of it fill up and a waiting list develops of those hoping to get in during late registration.

Today's college-age adults are of the "TV Generation." Rather than having been taught the value of reading during their youth, they were instead allowed to watch some six hours of television daily. Rather than being given science-oriented toys (telescopes, microscopes, chemistry sets, erector sets, radio kits) to pique their interest in nature and develop their inquiry skills, they were instead given video games.

Also at fault is an education system which hires teachers who have no background in the subject in which they teach - these faculty hold something called an "education degree" rather than having majored in a specialty. I can't imagine hiring someone to teach chemistry who doesn't hold a degree in chemistry. Shameful. (I look back at my high school teachers - all held a bachelors or masters degree in their field.)

It's frightening to think that these young adults will be the leaders of our communities and nation in the years to come. God help us.

Sales dropped off to practically nil during the years of low sunspot activity. (The HTX-100s on rec.radio.swap were going for $65 then.) If instead they would have marketed a 10, 12, 15, 17, and 20m rig, or even one for just 10, 12, and 15m, sales might have been good enough during those bleak propagation years to have continued production.

Jerry, do you not know that NO rule is in effect that requires the manufacturers to build consumer devices so that they are immune to RFI from ANY source? Do you not know that many, even most such devices-TVs VCRs, telephones, and many others are routinely affected by radio signals even though they are NOT radio recievers, not designed to be, nor intended to be? Don't you know that they COULD very easily and cheaply be made to be mostly immune from normal overload and RFI interference by the manufacturer merely adding a few cents worth more parts, but that is not required by law or regulation, so almost none does? That the FCC has the authority to require this of the manufacturers but has declined to do so? That the FCC, in conducting on-the-air RFI tests with operating ham radio stations discovered that virtually no RFI case was solved by the amateur reducing power from full legal limit to 100 watts?
That the FCC has received so many unwarranted complaints from consumers of RFI, using up so many hours of scarce employee time that they have adopted a policy whereby they don't even respond, rather they refer the complainant to a local TV or electronic serviceman?

Just what DO you know about this subject Jerry?

Don't know why that would be. If you call CQ on 160 and CQ on 20 and CQ on 6, why wouldn't "CQ from K8MN" be acceptable? A lengthy CQ, on the other hand, would be silly.

A simple calculator should do the trick.

If your coordinates are say N37d 50.275m W73d 42.875m that would convert to N37d 50m 16.5s W73d 42m 52.5s. Simply take the figures to the right of the decimal and multiply them into 60.

To convert seconds into decimal, simply divide the number of seconds by 60.

That doesn't make sense. If they've been on HF CW all their working
lives and not using phone, then why would they suddenly have the
urge to "say" CQ on 2m? Seems to me they'd be keying their mic
attempting to send -.-. --.-

(BTW, the ITU phone equivalent of "CQ" is "Hello All Stations.")

We just heard from a lady who, due to her mountain-top location,
is able to key up several repeaters at once.

In a metro area, a ham might be living in an above ground apartment
and able to key several rptrs in which a ground-based amateur couldn't.

In either case, the coordinator is not to blame.

>Repeater controllers featuring voice ID have been available for

>ID for 25 years, using a tape loop before digital voice storage
>systems became available).

Yes, and the K6MYK had a voice tape-loop ID running back in the early
60s. Today, *I* certain wrould rather hear a low-modulated MCW ID
than some mechanical voice ID. (Notice I gave my preference, not
claiming, as you do below, that it's most users' preference.)

>For those repeaters still using MCW,

Well, many people here seem to think that, if done right, adding $1 to $10
to the cost of the $200 TV would make it much more immune to TVI from
sources not actually coming in on the received frequency through the
antenna connector. I think this is probably true. I also think it's
very unlikely to happen unless the FCC mandates better TV design.

Ok, Dick:
several years ago, I bought a Motorola TV and had RFI problems
with my ham rig.
Sent them a letter, mentioned FCC, and a week later got a
high-pass filter that took care of the problem.
Maybe they do that so that there WON'T be a regulation!!!

Hello folks,

Not only is seeking FD QSOs on a repeater a liddy thing to do, any QSOs so made won't count anyway. Voice repeater QSOs (except through satellites) don't count.

>Does anyone have any comments on these amplifiers before I decide on my own
>with what little info I can find out there?

I have the MH-A302. It works pretty much the way MAHA describes. My
power output is a bit lower than what is specified, but the power *in*
is also below 5 W. This seems to be because the amplifier input is not
50 ohms resistive, and the SWR causes the HT to throttle back on output
power. I've used it with a FT-50 and FT-51.

And yes, you can use the FT-51 as a crossband repeater with the 302.
When transmitting on VHF, the UHF receive path through the amplifier
remains open (and vice versa). This is a neat feature.

I think the main problem of the unit is that it has no fan. It does
have a good-sized heat sink, so operating at full power for a few
minutes is fine. But if you want to talk for a long time, it really
seems like it needs a fan. It gets too hot to hold.

The fact that the radio mounts on the amplifier is both advantage and
disadvantage. It provides a nice way of mechanically mounting the radio
and providing power to it. It also means that you can no longer hold
your handheld in your hand. You really need a separate mic or
speaker-mic.

Dave

2720. What happened to Standard Radio?

George

The VHF and UHF bands were indeed "magic" at one time. Here in
New England, this occurred in the mid 60s, a time before many repeaters
were on the air, and before the manufacturers jumped on the wagon
and turned it into a CB radio type money machine.

Early FMers were a close knit bunch. I remember the thrill of getting an
old
military VRC19 up and running on two meter FM. I also remember the
old tube RCA clunker mobile I ran in my first car--the dynamotor would kill
the battery in five minutes of TX time! Anyone who was on FM either had to
modify an old commercial two-way clunker, or convert some military rig to
ham
service. Everyone helped each other to get on the air, and to keep the
stuff
running. We even had some OTs who modified their old Gooney boxes for
FM! Those were fun days, before it became another appliance operation.

Regards

Pete

It looks like tehy intended to implememt it, but never acually did so. I've
been told that it'sd been changed in the newer ft-50's top match the american mode
almost exactly, or has been removed. Like what they did be removing the Freeband mode.
It was origionally there for use on the designer's workbench, but was never taken out
because the designers never thought that anyone would even bother to set the radio to
that mode. But they did.
I have no idea what ARS or other settings are because my tests only dealt with
the freq bands. But explore and tell me what happens. I'd love to add it to my faq.

I have been expiramenting with the idea of making an automated program to aide the home user with doing teh mod, and doing the mod for them. Just plug in the interface cable and follow the on screen pictures and instructions. But I'm not a good computer programmer, so if any programmers out there want to help me out, I'll get serious about reverse engineering the com port protocols (not settings) for exactly what the ADMS software does to get the ft-50 to send and recieve files and formulate the needed work to go into a program to automate the modification process.
Any programmers out there who also happen to own a ft-50? It dosen't matter if you program in AMS for dos, just as long as you're an IMB pc / MS-DOS programmer.

Diaper_Reagan <CHECK_MY_SIGNATURE@EMAIL.COM> wrote:
>Everyone one of you who posted a denial of what I stated can go to hell.

Diaper - let's place this in a more understandable setting which should be easier to understand: Suppose your neighbor is an amateur entomologist and collects and breeds insects. Knowing this, suppose you open all the doors and windows of your home and remove all the screens. Whom should you blame if your home then becomes infested with flies and other insects, along with some stray dogs, cats and kids? Are you going to accuse your neighbor of shooing flies into your home?

Now apply the above analogy to your television interference: Your TV has numerous "open doors and windows" due to cost-cutting engineering. This makes it susceptible to "flies and other insects" from your neighbor's collection. All you need to do is to place screens on all those "open doors and windows" in your TV (by shielding and filtering), and allow your neighbor to continue his lawful hobby in peace.

(OTOH, if your neighbor is raising a squad of trained killer bees which attack you in your yard, THEN you have every right to demand he correct his unlawful actions.)

Do you understand now?

>Both mods(the free-band AND the TX one) took me under 1/2 hour of total
>time-and I did NOT use optimum equipment to do the mods.

The problem with the hardware mod is that it's possible to damage the radio
and have to get it repaired. I also suggest that the software mod does
work, although frankly other than wanting to be able to monitor 222 MHz,
there was no reason for me to do any mod. I'm not a member of CAP
or MARS, and frankly keying up on let's say 451.000 MHz does not hold
a thrill for me. I strongly suggest the software mod, and setting the rig
to Candadian mode, which does allow listening everywhere without the
risks associated with for example setting your split to 5 MHz, and tuning
to 447.010 or some similar frequency with the split set to +5 MHz. Why
risk an amateur license for the ability to transmit on places the FT-50
can't be used to transmit legally? No, it's not illegal to have the ability
to transmit, but it is illegal to transmit, and it would be just my luck
for example to set the wrong split, key up, and have identified myself
as I transmitted off frequency.

Nahhh, It's all in the reception and tuning. On HF, people are tuning
the band and you have to stick out for a while to attract attention. On
a repeater, all can hear just fine like on a telephone. To go though HF
style calling histronics on a repeater is just plain silly. Doesn't have
much to do with class of ticket. It's usually done by 67 year old timers
that have been on hf all their life working cw, or brand new ones just
copying what they have heard . Most quit very quickly after being told
it's kinda funky behaviour. MK

Well, you pretty much nailed it , to say cq once would be a big deal,
but to get on HF style would be a different story. Like being in a room
with a bunch of people that can all hear each other just fine. If I saw
Elvis, I wouldn't walk up and say , calling Elvis, calling Elvis,
calling Elvis, hellooooooooo Elvis, I just say, Elvis?, or maybe , Hey
Elvis!.... MK

That's easier said than done. There is only one repeater (2m) in range
of my QTH and it's the only one in the entire county. I'm certainly not
going to deliberately alienate the few local ham friends I have by calling
CQ on that repeater. Why would you want a reputation for being a LID?

> > were blazing along, and I didn't feel like I was helping by slowing them
> > down.

If you gave them a QSO at any speed, you were definitely helping. Most (I think) guys will QRS automatically when they hear you come back (or call CQ) at a lower speed. I had one or two guys come back to me beginning with the command: QRS. That's a good, direct way to communicate what you need. (Some older hams may send slowly due to hand coordination problems, arthritis, etc., but can still copy high speed fine. So you're not sure whether to match his slower speed.)

I often drop my speed and move up to 060 or higher to work some slower ones, not because I'm a nice guy but because I need the QSOs.

User-hostile contest programs can make it hard to QRS. But sophisticated ones like TR-log have single key QRS (and whatever the opposite is ...) control, for quick and easy QRS and restore. Also, TR-log has a database of calls and can actually access the preferred speed of the station being worked and match it. (I'm not sure how the speeds get into the database, though.)

From: Ron Ling <rling@cad3.uccb.ns.ca>
Message-ID: <364AE7DA.4BBD@cad3.uccb.ns.ca>
Source record: 158168

Hi,
I just bought a Kenwood TH-27A.
It has the ext range mod done to it already.(136-174)
But when I go outside the 144-148 range, I cannot go beyond
the 0.600 offset. Is it possible to make it any offset you want (+/-)
Also, is it possible to receive the aircraft band on this radio?

Any help would be greatly appreciated,
Ron

Lots of veterans on amateur radio, judging from the number of old war stories one can hear on any given day while tuning across the bands. That and the always-popular subject of health ailments, caused by old war wounds and injuries.

Just another example of how the average age of amateur operators is increasing and how ham radio is (literally) dying off.

Hey Drew, go screw yourself. Here are four nice messages that haven't
a thing to do with your sorry ass and you come along posting garbage.
Go play with yourself or something and get lost. You probably would
have gone to Canada during Vietnam you gutless little bastard. I'll
bet that you wouldn't be so brave with your comments in person because
you would get your teeth knocked out, so go hide behind your keyboard
you fat slob. Any veteran who wants to address Drew on line should
write him at mnmaniac@aol.com and express your feelings to him. Now,
thank you for your service to our country and I pray we don't go to
war again.

I think Masa just wants someone, anyone, to talk to - about anything.
If he can't contribute anything useful, or on-topic, he'll try trolling
instead.

A while ago, he posted a complaint about McGill University and how awful
it is to be a student there. There was a pointer to a web page that
detailed at great length all of the things that had happened to him.
Some of it seems to be due to a bad choice of where to live - university
residences are often not kind to people who don't know how to "fit in".

But it also shows someone who can't seem to get along with *anyone* else.

I was somewhat of a misfit when an undergrad in residence too. But I
did have some friends, and I didn't need a lot of attention from other
people - I was happy to just do what I wanted on my own. I also figured
out that I was better off living off campus. Masa seems to be someone
who really *needs* attention from other people, and yet doesn't have
the social skills to make friends. So he makes enemies instead.

I always used to wonder why he would expend so much effort reading and
posting things in newsgroups dedicated to activities that he says he
doesn't like. Why not do something he *does* like instead? Maybe he
hasn't found *anything* that he does like.

That's my take on it, anyway.

Anything higher than 60 feet!

Remember, this is a CB discussion:

Federal Communications Commission
Rules and Regulations
http://www.fcc.gov/wtb/rules.html

ï¿½ 95.408 (CB Rule 8) How high may I put my antenna?

(a) Antenna means the radiating system (for transmitting, receiving or
both) and the structure holding it up (tower, pole or mast). It also
means everything else attached to the radiating system and the
structure.

(b) If your antenna is mounted on a hand-held portable unit, none of
the following limitations apply.

(c) If your antenna is installed at a fixed location, it (whether
receiving, transmitting or both) must comply with either one of the
following:
(1) The highest point must not be more than 6.10 meters (20
feet) higher than the highest point of the building or tree
on which it is mounted; or
(2) The highest point must not be more than 18.3 meters (60
feet) above the ground.

(d) If your CB station is located near an airport, and if you antenna
structure is more than 6.1 meters (20 feet) high, you may have to obey
additional restrictions. The highest point of your antenna must not
exceed one meter above the airport elevation for every hundred meters
of distance from the nearest point of the nearest airport runway.
Differences in ground elevation between your antenna and the airport
runway may complicate this formula. If your CB station is near an

airport, you may contact the nearest FCC field office for a worksheet
to help you figure the maximum allowable height of your antenna.
Consult part 17 of the FCCï¿½s Rules for more information.

ï¿½
WARNING: Installation and removal of CB
station antennas near powerlines is dan-gerous.
For your safety, follow the installa-tion
directions included with your antenna.
ï¿½
[48 FR 24894, June 3, 1983, as amended at 48
FR 41416, Sept. 15, 1983]

hope this helps...

Well, I have aircraft and local police calls comming over the cable
interfering with channel(s).

Does that let me take them to court and have their stuff taken?
I think not.

Can I take the cable company to court?
Perhaps when pigs fly, but I will not hold my breath for that.

Gee, it CAN'T be my TV... I PAID too much for it.
I must have over looked that little sticker on the back saying things like
it's my problem.

Gee, can I take the TV company to court?
When I win the lottery.

I have to find SOMEBODY to blame.
Can't say it was my fault,

I didn't see the sticker...

Really...
They can't hold me to that, can they?

Uh-uh, I noticed my scanner interferes with the cordless phone.
Time to take out the trash.

Unsigned; (Scanner police might get me. I missed that sticker too!)

Disclaimer; This was written as a joke. I say this because someone will get
their knickers in a twist and take it seriously, ok?

What is "Canadian Mode" and how do you get into it? I have an older
FT-50 that was purchased in Canada (where I live), and the manual
indicates nothing about different coverage for Canada. As far as I
can tell, it's identical to a US version FT-50 sold at the same time.
Is Canadian mode only available in recent FT-50s?

I think the point here is that IF the radio operator is at fault, due to
running equipment that is not within FCC spec's, then HE should be made
to take corrective measures. HOWEVER, if the radio operator's station is
clean, and there is still a problem, then it is up to the person
receiving the interference to take corrective action. It's only fair.
Why should all radio operators cease operating, when one or 2 faulty
TV's come into the neighborhood?

Ironically, the higher you place your antenna, the less your station
will "get into" TV's and other consumer electronics. This is due to the
fact that the radiation pattern of the antenna is now above the houses
and utility lines that usually couple the RF signals into neighboring
houses.

If there are multiple repeaters on the same frequency in the same
area, somebody's frequency coordination body hasn't been doing
their job. If there is a coverage overlap in a fringe area, then different
CTCSS acess tones will be required. So you can tell which is which
by the CTCSS tone you have to use to bring it up.

Repeater controllers featuring voice ID have been available for
at least 15 years now (one of the Atlanta machines has had voice
ID for 25 years, using a tape loop before digital voice storage
systems became available). For those repeaters still using MCW,
I've yet to find one that IDs slower than 20 WPM. To most Techs,
and many Generals and Advanced, it is just a noise to be ignored
that comes on every 10 minutes to satisfy the FCC. Thus it is
made as brief as the law allows.

> Is Canadian mode only available in recent FT-50s?

No, it's pretty much on all radios, at least the older ones. You see, Yaesu,
in order to make the radio cheaper to produce, made the radio in just one design with
a neat little software byte in it that when changed would alter the rx and tx bands
to meet with radio codes of foriegn countries. This way, the exact same hardware
could be manufactured, but juts one little software byte would cripple operation for
other countries, like europe, africa, japan, etc.
My faq details how to change the country code. The American country code,
01h, is the most common. But there is an alternate to that, the Canadian country
code, 05h. This has the exact same rx and tx limits as the american code, but with
200-299.995mhz added, and cell rx now restored.
Changing this setting is not easy because the designers never intended for it
to be done by the user. But I have detailed the modification in a faq, along with how
to set the radio to freeband mode. All you'll need on your computer is the ADMS
interface cable and software, and a hex editor.
If you have any questions or troubles performing the mod, feel free to ask.

It sounds like one of two problems. The first, and most common, is that
you've picked up a newer one that can't be modified and you don't know this.
But if you're getting teh cerr message, it sounds like you're doing it wrong.
I need to clean up my faq a tad, but here's some of the fixes here for you:

1.) Change only the /second/ of the two bytes first. Think of them like this, the
second one is what you want it to go to, and the first one is what it currently is.
After the mod is sucerssful, change both bytes on all files so that they'll work.

2.) Turn off your template and work from just a .rdf file. Having the template on
cauyses all sorts of interesting problems. This is one of the most common problems
(short of everyone buying a new one thinking that it could be modified :)). After
successful modification, you can turn it back on, after creating a new one or
changing both bytes in the old one.

Remember to check your success by downloading a fresh .rdf file and viewing
teh results, plus, /make backups/ in case you flip up. Don't x-mit out of band,
and happy modding.

I'd say you've hit it right on the head. USENET is chock full of people whose primary purpose in being there is to get people to acknowledge that they exist, whatever it takes to do it. If that means trolling, so be it...at least if someone takes the time to tell you you're an idiot, they're forced to acknowledge your existence in order to do so. The opposite of love isn't hate...it's apathy. If we refused to acknowledge such folks, they'd simply go away (at least to somewhere where they got the attention they craved). It's why such people as Masa and CBRambo are on my killfile...they can go get their validation elsewhere; there are plenty of folks who are ready to gush flames at the drop of a hat. It's also a superb illustration of the saying about civilization being little more than a thin veneer, but now I'm getting WAY off-topic.

So to get back on...to all those who offered any sort of congratulations to me, I'm happy to say that I =did= get a license and a callsign, despite some paperwork holdups. And I'm looking forward to many happy hours using it, no matter how many naysayers and jammers and general jerks there may be out there trying to ensure otherwise.

73 to all, and proud to sign myself...

>
> Thanks.

You don't need a site...just a calculator or a pencil and paper. I'd recommend the calculator, myself.

But just in case, here's the simple way to do it by hand. Let's say you have as a latitude 45.368 degrees. First, strip off the whole number, then multiply by 60 to get decimal minutes:

.368 * 60 = 22.08, so we have 22 minutes. Strip off the whole number (22), and again multiply by 60:

.08 * 60 = 4.8, so that's 4.8 seconds.

45.368 degrees = 45 degrees, 22 minutes, 4.8 seconds.

That's just how easy the process is.

73,
Dave KC0EKV

Hi, Dave,

You have to be aware that the TV doesn't have to be "faulty" -- it just
has to be a poor design or simply too close to the RF source. Since
TVs are commodities, you can count on the cheapest design possible that
will sell, and that's not going to be a good design. Part 15 compliance
allows the manufacturers to "get away" with that.

To be fair, how many people -- aside from videophiles -- would buy $2000
TVs because they had decent RF sections?

A lot of operators operate using clubs.

I've done sweepstakes five consecutive years.

Not once have I used my own callsign

It's always been with a club call, and the check has been 32 or 33.

I was licensed in 1984 and I'm 29 and have contested continually
during that period, improving my skills along the way.

This all makes sense. But it seems that FT-50's sold in Canada actually use the USA country code - nobody bothered to program them differently, even though the design provides for it.

> My faq details how to change the country code. The American
>country code, 01h, is the most common. But there is an alternate to
>that, the Canadian country code, 05h. This has the exact same rx and tx

Does it still have ARS (auto repeater shift selection) suitable for US/Canadian band plans?

>But I have detailed the
>modification in a faq, along with how to set the radio to freeband
>mode.

I don't actually want freeband mode, because of the loss of ARS, and because I don't need wideband transmit. But Canadian mode does sound interesting (particularly in Canada!) I'll have to try it. Thanks.

Dave

Note that most scientific calculators have functions to convert between
decimal degrees and degrees/minutes/seconds. Sometimes they say that
it's for converting decimal hours to hours/minutes/seconds, but the
conversion is the same in both cases.

However, the exact same can be said for the owner of the TV. So what do you think, is one legal operator responsible for solved the problems of another?

> I'm also aware that some TV's and steros are so cheaply made
> they pickup the dog barking across the street.

Yep, so now what. You expect the ham to solve the problem caused by YOUR poorly designed equipement?

> It's the CB Rambo who
> sets up junk in the middle of a neighborhood trying to put out 10,000
> watts that makes it hard for all of us. I run a 2950 through a 350 HD
> into a antron 99 (a bleeder so some say) and I have no problems because
> i simply took the time to set my rig up before I keyed the mic for the
> firat time.

However, that is only to say that YOU haven't had any problems, and you are not aware of any problems. Which does NOT mean that problems do not exist because of YOUR transmissions. What if someone with a $25 13" TV convinced the town to ban your operations because you caused interference to his cracker box TV, or demanded that you install hundreds of dollars of equipement to keep him from having to buy a $5 high pass filter or spend another $20 on good quality coax instead of the swap market special he's using now. Sorry, but limits have to be drawn. If the transmission is legal, and you still have TVI then it is up to YOU to fix the problem with your TV.

> Check the regulations, it is all there.

Sorry, while you should temporarily suspend operation until you confirm
that you are within the legal limits, once that is confirmed any
continueing interference is not the responsibility of the ham. He will
almost certain work with you to solve it, but that's from public spirit,
not the law.

Further you do NOT need to prove that you aren't causing the problem, but
rather (like any other law violation) it's up to them to prove that you
are.

No. The FCC doesn't let manufacturers sell transmitters or other
devices that generate more than some specified amount of unwanted
RF on any frequency. The manufacturer has to limit unwanted RF output
or he can't sell the device. Violators face fines.

If my radio rig improperly picks up the local TV station properly
transmitting on their assigned frequency and power level when I'm trying
to listen to a ham radio frequency, should I be able to tell them to
stop transmitting? I also like to listen to various police, railroad,
etc. frequencies, but a cheap (or sometimes expensive) scanner will
also pick up nearby, legally operated pager services on other
frequencies. Can I tell them to stop transmitting, too?

>was OK to record Monica, now they are back to it is
>terrible to record Newt.

A fair point ... but only fair. Recording Monica was
gathering evidence of a crime already known to exist,
while recording Newt - by unknown, uninvolved persons -
was simply voyeurism (and, given his position, a
potential national security breech). Hmm ... if ABCs
sources recorded one word about Iraq while they were
listening for juicy stuff, they are probably in
violation of all sorts of espionage laws.

The president is supposed to keep the congress informed
of potential use of military force - and Newt would have
been the primary contact for that purpose. This is info
which Saddam Hussein and many other potentially unfriendly
entities could profit greatly from.

So - ABCs boys are SPIES in my book. Arrest the traitors !
Where's the goddamn FBI when we need them ? Cruising naughty
web sites and persecuting gun store owners probably.

Monica, well, she didn't know much about such things
beyond what BC said on the phone while she was sucking
his knob. Still a potential security problem though.
Arrest Tripp for recording - and if Monica repeated
anything about Iraq or Bosnia to Tripp, arrest her too.

I also have an FT50 and am planning to buy the MaHa 302. It seem like
the cheapest way to get more power. It's not as nice as a new dual
band unit, but I think it will due 'till more cash is available.

The friendly folks at MaHa say the mirage unit is a copy of theirs.
The local store has a used one in the consignment case for $100 (no
radio adaptor).

The government requires TV makers to build TV sets that are NOT
susceptable to interference from legally operated RF devices -
They don't build them that way because it would cost an extra 25
cents a set!!!
If you get interference on your TV, the company MUST provide a
filter for the TV.

KC0EKQ... Brand new lic, no code yet. Do not believe code is necessary. Will get the 5wpm only because its required. Will NEVER use it. Sent in response to Fcc on new reg and did indicate max code at 5wpm

Amateur equipment is built to government standards and they DON'T
"leak" RF into other bands!!!!

I recently purchased a used Icom IC737 which appears to have a fault on the tuner board. I have replaced the diodes and chip as recommended by Icom but to no avail.

Does anyone have a copy of the service manual for the 737 and if so could they please fax me a copy of any pages relating to the tuner section. I would be particularly interested in any test points, voltages etc.

My fax number is 519-839-5360.

Many thanks,

Larry VE3YET.

Do what? Where?

Oooooh.....Captain Bathtub is TALKING TOUGH now!

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

You'd here Thrower the Bathtub Commander in there, too...but his signal's too
weak to cut it on 75m.
